Axis Network Video Exam Sample Questions (Q151-Q156):

NEW QUESTION # 151

Which of the following causes the image to get black corners?

- A. WDR is disabled and image is underexposed
- **B. The lens is intended for a larger image sensor**
- C. The lens is intended for a smaller image sensor
- D. WDR is disabled and image is overexposed

Answer: B

Explanation:

"When a lens intended for a larger sensor is used on a smaller sensor camera, the projected image circle does not fully cover the sensor area, causing vignetting or black corners in the image."

- Axis Lens Guide White Paper

"Black corners or vignetting often result from a mismatch between lens and sensor size."

NEW QUESTION # 152

Which IP rating is most appropriate for an outdoor school playground?

- A. IP54
- B. IP42
- **C. IP67**
- D. IP6K9K

Answer: C

Explanation:

For an outdoor school playground, the most appropriate IP rating is IP67. This rating indicates that the camera is completely protected against dust (the first digit '6') and can withstand immersion in water up to 1 meter for 30 minutes (the second digit '7'). This level of protection is ideal for outdoor environments where the camera may be exposed to dust, rain, and other environmental factors. References: Axis Communications Outdoor Cameras

NEW QUESTION # 154

What advantage does a Vi" 1080p camera have over a Vi" 4K camera?

- A. Smaller aperture
- B. Larger aperture
- C. Larger pixels
- D. Smaller pixels

Answer: C

Explanation:

A 1080p camera with a 1/2" sensor typically has larger pixels compared to a 4K camera with a 1/2" sensor.

Larger pixels can capture more light, which improves performance in low-light conditions and enhances image quality by reducing noise. This is a critical advantage when clear image capture in various lighting conditions is necessary. Axis documentation on camera sensors and image quality highlights that larger pixels provide better light sensitivity and dynamic range.

NEW QUESTION # 155

Which is an advantage of the H.264 compression standard?

- A. Compared to Motion JPEG, H.264 video reduces the CPU load when viewing the video
- B. Bandwidth and storage usage is independent of the amount of motion in the video
- C. The intra-frame coding makes the video less sensitive to network dropouts
- D. In most situations, compared to Motion JPEG, H.264 video reduces bandwidth and storage usage

Answer: D

Explanation:

The H.264 compression standard is highly efficient and can significantly reduce bandwidth and storage requirements compared to Motion JPEG. This is because H.264 uses both intra-frame and inter-frame compression, which reduces the amount of data needed to represent video by eliminating redundant information between successive frames. Axis Network Video documentation states that H.264 can reduce the required bandwidth and storage by up to 50% or more in typical surveillance scenarios, making it an advantageous choice for video compression in surveillance systems.
