### Detailed Exam Overview

The AWS Certified Developer – Associate certification exam, or DVA-C01, is offered and sponsored by Amazon. The applicants will have 130 minutes to cover about 65 questions. These items can be expected in different formats, such as multiple choice and multiple response. As for the pass mark, the individuals have to obtain 720 points on a scale of 100-1000. You can take this test in many languages, including English, Korean, Japanese, and Simplified Chinese. To be eligible for the exam, you are required to pay the fee of \$150. It is important to note that its pricing may differ based on the country in which a person is taking his or her exam.

While this test costs \$150 in the USA, it can cost more in other countries that impose taxes on the certification exams.

The AWS Certified Developer - Associate exam covers a range of AWS services, including AWS Lambda, Amazon Simple Queue Service (SQS), Amazon Simple Notification Service (SNS), and Amazon Simple Workflow Service (SWF). Candidates will be tested on their ability to integrate these services into their applications, as well as their understanding of AWS Identity and Access Management (IAM), AWS Elastic Beanstalk, and AWS CloudFormation. AWS-Developer Exam consists of 65 multiple-choice and multiple-response questions, and candidates have 130 minutes to complete it. Successful candidates will be able to demonstrate their understanding of AWS services and their ability to develop and deploy applications on the AWS platform.

Physical and Environmental Security

AWS's data centers are state of the art, utilizing innovative architectural and engineering approaches.

Amazon has many years of experience in designing, constructing, and operating large-scale data centers. This experience has been applied to the AWS platform and infrastructure. AWS data centers are housed in nondescript facilities. Physical access is strictly

controlled both at the perimeter and at building ingress points by professional security staff utilizing video surveillance, intrusion detection systems, and other electronic means. Authorized staff must pass two-factor authentication a minimum of two times to access data center floors. All visitors and contractors are required to present identification and are signed in and continually escorted by authorized staff.

\* When a storage device has reached the end of its useful life, AWS procedures include a decommissioning process that is designed to prevent customer data from being exposed to unauthorized individuals.

\* AWS uses the techniques detailed in DoD 5220.22-M (National Industrial Security Program Operating Manual) or NIST 800-88 (Guidelines for Media Sanitization) to destroy data as part of the

\* decommissioning process.

\* All decommissioned magnetic storage devices are degaussed and physically destroyed in accordance with industry-standard practices.
