Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q218-Q223):

NEW QUESTION # 218

You deploy on SAP environment on Azure.

You need to monitor the performance of the SAP NetWeaver environment by using the Azure Enhanced Monitoring Extension for SAP.

What should you do first?

- A. From Azure CLI, run the az v aem m set command.
- B. From the Azure portal, enable the Custom Script Extension.
- **C. From the Azure portal, enable the Azure Network Watcher Agent.**
- D. From Azure CLI, install the Linux Diagnostic Extension.

Answer: C

NEW QUESTION # 219

You plan to deploy multiple SAP HANA virtual machines to Azure by using an Azure Resource Manager template.

How should you configure Accelerated Networking and Write Accelerator in the template? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 220

You have an existing SAP landscape on Azure. All SAP virtual machines are on the same virtual network.

The SAP application servers, SAP management servers, and SAP database servers are each on their own subnet. You need to ensure that only the application and management servers can access the subnet to which the database servers connect. What should you configure?

- A. Azure Application Gateway and firewall rules
- B. network security groups (NSGs)
- C. Azure Key Vault secrets
- D. Azure AD service principals

Answer: A

NEW QUESTION # 221

HOTSPOT

You are planning the Azure network infrastructure for an SAP environment.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer:

Explanation:

Explanation:

Box 1: Yes

Box 2: No

A design that's not supported is the segregation of the SAP application layer and the DBMS layer into different Azure virtual networks that aren't peered with each other. We recommend that you segregate the SAP application layer and DBMS layer by using subnets within an Azure virtual network instead of by using different Azure virtual networks.

Box 3: Yes

Be aware that network traffic between two peered Azure virtual networks is subject to transfer costs. Huge data volume that consists of many terabytes is exchanged between the SAP application layer and the DBMS layer.

You can accumulate substantial costs if the SAP application layer and DBMS layer are segregated between two peered Azure virtual networks.
