

Pass Guaranteed Quiz Google - Professional-Cloud-DevOps-Engineer - Pass-Sure New Google Cloud Certified - Professional Cloud DevOps Engineer Exam Exam Guide

P.S. Free 2026 Google Professional-Cloud-DevOps-Engineer dumps are available on Google Drive shared by Pass4SureQuiz: <https://drive.google.com/open?id=1hdk263AzIeIqBXVpNVxnUPeq0bxLB3Is>

After the client pay successfully they could receive the mails about Professional-Cloud-DevOps-Engineer guide questions our system sends by which you can download our test bank and use our study materials in 5-10 minutes. The mail provides the links and after the client click on them the client can log in and gain the Professional-Cloud-DevOps-Engineer Study Materials to learn. For the client the time is limited and very important and our product satisfies the client's needs to download and use our Professional-Cloud-DevOps-Engineer practice engine immediately.

Prerequisites

The Google Professional Cloud DevOps Engineer certification exam is designed for the Application Developers and Programmers who want to learn how to design, develop, and deploy Cloud applications. This test has no formal prerequisites. However, the individuals are recommended to have at least 3 years of industry experience, involving 1 or more years of experience with managing solutions on Google Cloud Platform.

New Professional-Cloud-DevOps-Engineer Exam Experience, Professional-Cloud-DevOps-Engineer Latest Test Sample

Our Professional-Cloud-DevOps-Engineer exam questions generally raised the standard of practice materials in the market with the spreading of higher standard of knowledge in this area. So your personal effort is brilliant but insufficient to pass the Google Cloud Certified - Professional Cloud DevOps Engineer Exam exam and our Professional-Cloud-DevOps-Engineer test guide can facilitate the process smoothly & successfully. Our Google Cloud Certified - Professional Cloud DevOps Engineer Exam practice materials

are successful by ensuring that what we delivered is valuable and in line with the syllabus of this exam. And our Professional-Cloud-DevOps-Engineer Test Guide benefit exam candidates by improving their ability of coping the exam in two ways, first one is their basic knowledge of it.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q72-Q77):

NEW QUESTION # 72

Your team is designing a new application for deployment both inside and outside Google Cloud Platform (GCP). You need to collect detailed metrics such as system resource utilization. You want to use centralized GCP services while minimizing the amount of work required to set up this collection system. What should you do?

- A. Instrument the code using a timing library, and publish the metrics via a health check endpoint that is scraped by Stackdriver.
- B. Import the Stackdriver Debugger package, and configure the application to emit debug messages with timing information.
- C. **Import the Stackdriver Profiler package, and configure it to relay function timing data to Stackdriver for further analysis.**
- D. Install an Application Performance Monitoring (APM) tool in both locations, and configure an export to a central data storage location for analysis.

Answer: C

Explanation:

The easiest way to collect detailed metrics such as system resource utilization is to import the Stackdriver Profiler package, and configure it to relay function timing data to Stackdriver for further analysis. This way, you can use centralized GCP services without modifying your code or setting up additional tools.

NEW QUESTION # 73

You are managing the production deployment to a set of Google Kubernetes Engine (GKE) clusters. You want to make sure only images which are successfully built by your trusted CI/CD pipeline are deployed to production. What should you do?

- A. Set up the Kubernetes Engine clusters with Binary Authorization.
- B. Set up the Kubernetes Engine clusters as private clusters.
- C. **Enable Vulnerability Analysis on the Container Registry.**
- D. Enable Cloud Security Scanner on the clusters.

Answer: C

NEW QUESTION # 74

You are managing the production deployment to a set of Google Kubernetes Engine (GKE) clusters. You want to make sure only images which are successfully built by your trusted CI/CD pipeline are deployed to production. What should you do?

- A. Set up the Kubernetes Engine clusters as private clusters.
- B. **Set up the Kubernetes Engine clusters with Binary Authorization.**
- C. Enable Cloud Security Scanner on the clusters.
- D. Enable Vulnerability Analysis on the Container Registry.

Answer: B

Explanation:

<https://cloud.google.com/binary-authorization/docs/overview>

NEW QUESTION # 75

You are responsible for the reliability of a custom-built, distributed file storage service that your company uses internally. This service handles thousands of file uploads and downloads daily. You need to define a service level indicator (SLI) to measure the reliability of your service usage and configure alerts to be notified of potential issues. Which SLI should you use to measure the reliability of the service?

- A. Average request latency of API calls (e.g. get, put, list)
- **B. Ratio of successful API calls to the total number of attempted API calls**
- C. Number of successful file uploads and downloads per minute
- D. Average size of objects stored in your service

Answer: B

Explanation:

SLIs are quantitative measures of service behavior. For reliability, success rate (successful vs. total requests) is the most fundamental metric.

"The most common SLIs are request success rate, availability, and latency."

- Google SRE Workbook: Implementing SLIs

"Availability SLIs often look like 'the fraction of requests that succeed.'"

- Google SRE Book

Option C directly maps to this definition and is the most accurate and measurable indicator of overall reliability.

NEW QUESTION # 76

Your company runs services by using multiple globally distributed Google Kubernetes Engine (GKE) clusters. Your operations team has set up workload monitoring that uses Prometheus-based tooling for metrics alerts and generating dashboards. This setup does not provide a method to view metrics globally across all clusters. You need to implement a scalable solution to support global Prometheus querying and minimize management overhead. What should you do?

- A. Configure workload metrics within Cloud Operations for GKE
- B. Configure Prometheus cross-service federation for centralized data access
- C. Configure Prometheus hierarchical federation for centralized data access
- **D. Configure Google Cloud Managed Service for Prometheus**

Answer: D

NEW QUESTION # 77

.....

The talent is everywhere in modern society. This is doubly true for IT field. With the popularity of the computer, hardly anyone can't use a computer. Working in the IT industry, don't you feel pressure? Educational level is not representative of your strength. Education is just a ticket, however really keeping your status is your strength. As IT staff, how to cultivate your strength? It is a good choice to take IT certification test which can not only help you master more skills, also can get the certificate to prove your ability. Do you want to take Google Professional-Cloud-DevOps-Engineer Exam that is very popular in recent?
