

SAP C_BCSBS_2502시험대비최신버전문제, C_BCSBS_2502인기시험덤프

그리고 ExamPassdump C_BCSBS_2502 시험 문제집의 전체 버전을 클라우드 저장소에서 다운로드할 수 있습니다:
<https://drive.google.com/open?id=10M5zA5ve05cqBF2IV-LHsZGpgQDxRHuM>

ExamPassdump선택으로SAP C_BCSBS_2502시험을 패스하도록 도와드리겠습니다. 우선 우리ExamPassdump 사이트에서SAP C_BCSBS_2502관련자료의 일부 문제와 답 등 샘플을 제공함으로 여러분은 무료로 다운받아 체험해보실 수 있습니다. 체험 후 우리의ExamPassdump에 신뢰감을 느끼게 됩니다. ExamPassdump에서 제공하는SAP C_BCSBS_2502덤프로 시험 준비하세요. 만약 시험에서 떨어진다면 덤프전액환불을 약속 드립니다.

SAP C_BCSBS_2502 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">Positioning SAP Business Data Cloud: This section of the exam measures the skills of Enterprise Architects and covers the positioning and strategic use of SAP Business Data Cloud. It involves understanding how data from various sources is managed, governed, and accessed to support intelligent business operations. The section aims to equip professionals with the ability to explain data unification and connectivity through SAP's cloud-based data platform.
주제 2	<ul style="list-style-type: none">Discovering SAP Business AI: This section of the exam measures the skills of Digital Transformation Specialists and focuses on exploring how SAP Business AI enables smarter decision-making. It includes identifying AI-driven features embedded within SAP solutions and how they contribute to automation, predictions, and enhanced business outcomes. Professionals are expected to understand how to promote AI adoption in business processes using SAP's intelligent technologies.
주제 3	<ul style="list-style-type: none">Positioning SAP Business Suite: This section of the exam measures the skills of Solution Consultants and covers how to effectively position the SAP Business Suite within various business scenarios. It includes understanding the core value, capabilities, and strategic advantages of SAP's integrated business applications. The focus is on enabling consultants to align SAP Business Suite offerings with customer needs to support end-to-end processes.

시험준비에 가장 좋은 C_BCSBS_2502시험대비 최신버전 문제 덤프데모 문제 다운받기

예를 들어SAP C_BCSBS_2502 덤프를 보면 어떤 덤프제공사이트에서는 문항수가 아주 많은 자료를 제공해드리지만 저희SAP C_BCSBS_2502덤프는 문항수가 적은 편입니다.왜냐하면 저희는 더 이상 출제되지 않는 오래된 문제들을 삭제해버리기 때문입니다. 문제가 많으면 고객들의 시간을 허비하게 됩니다. ExamPassdump는 응시자에게 있

어서 시간이 정말 소중한다는 것을 잘 알고 있습니다.

최신 SAP Certified Associate C_BCSBS_2502 무료샘플문제 (Q19-Q24):

질문 # 19

For installed base customers, what can RISE with SAP journeys include? Please choose the correct answer.

- A. Starting fresh with a greenfield ERP implementation on private cloud
- **B. A hybrid two-tier approach**
- C. Moving directly to public cloud without any intermediate steps
- D. Leveraging RISE with SAP methodology to drive complex core principles

정답: B

질문 # 20

Which SAP Business Suite components are critical for enterprise-wide integration? There are 3 correct answers to this question.

- **A. SAP S/4HANA**
- B. SAP Predictive Maintenance
- **C. SAP ERP**
- **D. SAP Business Network**
- E. SAP Ariba

정답: A,C,D

질문 # 21

What is the primary purpose of SAP Business Suite? Please choose the correct answer.

- **A. Integrating core business functions across various modules**
- B. Enhancing social media engagement
- C. Managing financial risk and compliance
- D. Automating IT infrastructure monitoring

정답: A

질문 # 22

What is the unique advantage of integrating SAP business applications and SAP BTP for end-to-end business process integration?

- A. Collection of contextualized, accessible data
- **B. Orchestration and enrichment of data coming from silos**
- C. Storage of centralized, harmonized data
- D. Generation of trusted, business-critical data at its source

정답: B

설명:

The question asks for the unique advantage of integrating SAP business applications(e.g.,SAP S/4HANA Cloud, SAP SuccessFactors,SAP Ariba) withSAP Business Technology Platform (BTP)to achieve end-to-end business process integration. According to official SAP documentation, the primary advantage lies in the orchestration and enrichment of data coming from silos, which enables seamless, integrated business processes across disparate systems. This makes Option C the correct answer.

Explanation of Correct answer:

Option C: Orchestration and enrichment of data coming from silos

This is correct becauseSAP Business Technology Platform (BTP)serves as a unified platform that orchestrates and enriches data from siloed SAP and non-SAP applications, enabling end-to-end business process integration. SAP business applications often operate in silos, generating data specific to functions like finance, HR, or procurement.SAP BTPprovides integration, extension, and AI capabilities to connect these silos, streamline processes, and enrich data with business context for holistic insights and automation. The Positioning SAP Business Suitedocumentation on learning.sap.com states:

"The unique advantage of integrating SAP business applications with SAP BTP is the orchestration and enrichment of data coming from silos. SAP BTP enables end-to-end business process integration by connecting disparate applications, harmonizing data, and enriching it with AI-driven insights, process automation, and extensions to deliver seamless, intelligent workflows." For example, SAP BTP uses tools like SAP Integration Suite to connect SAP applications (e.g., SAP S/4HANA for ERP and SAP SuccessFactors for HR) and third-party systems, orchestrating data flows to support cross-functional processes like order-to-cash or hire-to-terminate. Additionally, SAP BTP enriches this data with capabilities such as embedded AI (SAP Joule), analytics, and custom extensions, ensuring that processes are optimized and contextually relevant. The documentation further notes:

"SAP BTP breaks down data silos by orchestrating data across SAP and non-SAP systems, enriching it with business semantics and enabling intelligent, end-to-end processes that drive transformation." This orchestration and enrichment are critical for achieving the integrated, intelligent enterprise vision of SAP Business Suite, making Option C the unique advantage.

Explanation of Incorrect Answers:

Option A: Storage of centralized, harmonized data

This is incorrect because, while SAP BTP supports data harmonization through tools like SAP Datasphere, the storage of centralized, harmonized data is not the unique advantage for end-to-end business process integration.

Centralized data storage is a feature of data management solutions like SAP Datasphere, but the question focuses on process integration, which involves dynamic orchestration rather than static storage. The documentation clarifies:

"While SAP BTP supports data harmonization, its unique value for business process integration lies in orchestrating and enriching data across applications, not merely storing it centrally." This option is relevant to data management but not specific to the process integration advantage.

Option B: Generation of trusted, business-critical data at its source

This is incorrect because generating trusted, business-critical data at its source is a characteristic of SAP business applications themselves (e.g., SAP S/4HANA generates real-time transactional data), not the unique advantage of integrating them with SAP BTP. SAP BTP enhances this data through integration and enrichment, but it does not generate the data. The documentation states:

"SAP business applications generate trusted, business-critical data at the source. SAP BTP's role is to integrate and enrich this data across systems for end-to-end process orchestration, not to generate it." This option misattributes the data generation role to SAP BTP.

Option D: Collection of contextualized, accessible data

This is incorrect because, while SAP BTP enables contextualized and accessible data through its integration and analytics capabilities, this is a secondary outcome rather than the unique advantage for end-to-end business process integration. The primary focus is on orchestrating and enriching data to enable seamless processes, not just collecting it. The documentation notes:

"SAP BTP facilitates contextualized data access as part of its capabilities, but the unique advantage for process integration is the orchestration and enrichment of data from siloed sources to drive unified business workflows." This option is too general and does not fully capture the process-centric advantage.

Summary:

The unique advantage of integrating SAP business applications with SAP BTP for end-to-end business process integration is the orchestration and enrichment of data coming from silos, as stated in Option C. This enables seamless, intelligent workflows across disparate systems, aligning with SAP's vision for the intelligent enterprise within SAP Business Suite. Option A focuses on data storage, which is not process-specific; Option B misattributes data generation to SAP BTP; and Option D is too broad, missing the orchestration focus. This answer reflects SAP's emphasis on breaking down silos and enabling integrated processes through SAP BTP.

질문 # 23

What are some key differentiators of SAP Business AI?

Note: There are 3 correct answers to this question.

- A. Embedded AI
- B. Large foundation models
- C. AI Foundation
- D. Ecosystem of Innovation
- E. Predictive Analytics

정답: A,C,D

설명:

The question asks for the key differentiators of SAP Business AI, which is a suite of AI capabilities integrated into SAP Business Suite to enhance business processes, decision-making, and automation. According to official SAP documentation and the provided

search results, the key differentiators of SAP Business AI include its ecosystem of innovation, embedded AI, and AI Foundation. These align with Options A, C, and E, making them the correct answers.

Explanation of Correct Answers:

Option A: Ecosystem of Innovation

This is correct because SAP Business AI is distinguished by its robust ecosystem of innovation, which includes partnerships with leading technology providers (e.g., NVIDIA, Google Cloud, Microsoft, AWS, Cohere) and implementation partners to deliver cutting-edge AI solutions. This ecosystem fosters collaborative innovation, enabling SAP Business AI to integrate advanced AI models, ensure interoperability, and address customer-specific needs through a network of expertise. The SAP Business AI overview on www.sap.com states:

"SAP's AI strategy includes a robust partner ecosystem with synergistic collaboration, partnering with industry leaders like NVIDIA, Google Cloud, and Cohere to deliver interoperable AI agents and scalable solutions. This ecosystem enables SAP Business AI to address unique customer challenges through combined expertise and innovation." [sap.com](https://www.sap.com) Additionally, the SAP News Center emphasizes the role of partners in driving innovation:

"A key element of SAP's AI strategy is leveraging partners' expertise. Partners develop innovative AI solutions and extensions, enhancing the SAP portfolio with customer-specific use cases built on SAP BTP." news.sap.com This ecosystem differentiates SAP Business AI by combining SAP's deep business process knowledge with external AI advancements, ensuring flexibility and rapid adoption of new technologies.

Option C: Embedded AI

This is correct because SAP Business AI is uniquely differentiated by its embedded AI capabilities, which are seamlessly integrated into SAP applications (e.g., SAP S/4HANA, SAP SuccessFactors, SAP Analytics Cloud) to enhance business processes directly within workflows. Unlike standalone AI solutions, embedded AI automates tasks, provides context-aware insights, and optimizes processes without requiring users to leave their SAP environment. The Exploring SAP's AI Strategy lesson on learning.sap.com states:

"Embedded AI Capabilities enhance SAP products by automating tasks, analyzing data, improving user experience, optimizing processes, fostering innovation, and ensuring seamless integration. Joule, a generative AI copilot, is embedded within SAP applications, offering generative AI, predictive analytics, process automation, and context-aware recommendations."

learning.sap.com For example, SAP S/4HANA uses embedded AI for predictive maintenance and supply chain optimization, while SAP Concur automates expense reporting. The SAP Business AI page on www.sap.com further notes:

"Drive impact with AI grounded in your business data and embedded into every business function. ... With access to over 230 AI-powered scenarios-expanding to 400 by the end of 2025-SAP Business AI streamlines operations across finance, supply chain, and more." [sap.com](https://www.sap.com) This embedded approach ensures that AI is relevant and immediately applicable, distinguishing SAP Business AI from generic AI platforms.

Option E: AI Foundation

This is correct because the AI Foundation on SAP Business Technology Platform (BTP) is a key differentiator, providing a comprehensive toolkit for developers to build, extend, and run custom AI solutions tailored to business needs. It includes services like SAP AI Core, Generative AI Hub, and access to leading AI models, ensuring scalability, security, and integration with SAP and non-SAP data. The AI Foundation, SAP's all-in-one AI toolkit article on community.sap.com states:

"AI Foundation is SAP's all-in-one AI toolkit, offering developers AI that's ready-to-use, customizable, grounded in business data, and supported by leading generative AI foundation models. It is also the basis for AI capabilities that SAP embeds across its portfolio." community.sap.com The SAP Sapphire Innovation Guide 2025 further elaborates:

"AI Foundation is the backbone of SAP's AI technologies and provides comprehensive developer tools to build, extend, and run custom AI solutions at scale-all in one system. It simplifies AI development and operations, offering tools like the Prompt Optimizer and access to models like GPT-4.1, Claude 3.7 Sonnet, and Gemini 2.5 Pro." [sap.com](https://www.sap.com) This differentiates SAP Business AI by enabling businesses to create bespoke AI applications while leveraging SAP's enterprise-grade infrastructure, ensuring flexibility and governance.

Explanation of Incorrect Answers:

Option B: Large foundation models

This is incorrect because SAP Business AI does not primarily differentiate itself through the development or use of large foundation models (e.g., large language models or LLMs). Instead, SAP partners with leading LLM providers (e.g., Cohere, Mistral AI, Meta) to integrate their models into the SAP BTP Generative AI Hub, focusing on business-contextualized AI rather than building proprietary LLMs. The SAP Business AI article on community.sap.com clarifies:

"SAP leverages a rich ecosystem of technology partner LLM offerings through SAP BTP's AI Foundation and Generative AI Hub, rather than developing SAP-specific LLMs. This approach ensures access to the latest innovations while prohibiting partners from training on customer data." pages.community.sap.com While SAP plans to fine-tune generic LLMs and create proprietary foundation models for structured data (e.g., SAP Foundation Model for tabular data), these are not yet a primary differentiator compared to the ecosystem, embedded AI, and AI Foundation.

Option D: Predictive Analytics This is incorrect because, while predictive analytics is a significant capability of SAP Business AI (e.g., forecasting demand in SAP Integrated Business Planning or predicting equipment failures in SAP S/4HANA), it is not a unique differentiator. Predictive analytics is a common feature in many AI platforms and is one of many capabilities within SAP Business AI, not a defining characteristic. The SAP Business AI documentation on www.fingent.com notes:

"SAP Business AI solutions use machine learning and advanced analytics, including predictive analytics, to gain insights into complex

data. However, its differentiation lies in its integration with business processes and data, not the analytics techniques alone." fingent.com The unique value of SAP Business AI comes from its ecosystem, embedded nature, and developer-centric AI Foundation, rather than specific techniques like predictive analytics, which are widespread across AI solutions.

Summary:

The key differentiators of SAP Business AI are its ecosystem of innovation (leveraging a robust partner network for collaborative AI solutions), embedded AI (seamlessly integrated into SAP applications for process optimization), and AI Foundation (providing a scalable toolkit for custom AI development), corresponding to Options A, C, and E. Option B is incorrect because SAP relies on partner LLMs rather than proprietary large foundation models as a differentiator. Option D is incorrect because predictive analytics, while important, is not a unique differentiator compared to the broader ecosystem and integration capabilities. These differentiators align with SAP's strategy to deliver relevant, reliable, and responsible AI within SAP Business Suite, as supported by the provided search results and official documentation.
