# Latest GICSP Practice Materials | GICSP Dumps Download

The PDF version of our GICSP study tool is very practical, which is mainly reflected on the special function. As I mentioned above, our company are willing to provide all people with the demo for free. You must want to know how to get the trial demo of our GICSP question torrent; the answer is the PDF version. You can download the free demo form the PDF version of our GICSP Exam Torrent. If you download our study materials successfully, you can print our study materials on pages by the PDF version of our GICSP exam torrent.

When you are visiting our website, you will find that we have three different versions of the GICSP study guide for you to choose. And every version can apply in different conditions so that you can use your piecemeal time to learn, and every minute will have a good effect. In order for you to really absorb the content of GICSP Exam Questions, we will tailor a learning plan for you. This study plan may also have a great impact on your work and life. With our GICSP praparation materials, you can have a brighter future.

## GICSP Dumps Download, GICSP Exam Cram

As is known to all, GICSP practice test simulation plays an important part in the success of exams. By simulation, you can get the hang of the situation of the real exam with the help of our free demo of GICSP exam questions. Just as an old saying goes, knowing the enemy and yourself, you can fight a hundred battles with no danger of defeat. Simulation of our GICSP Training Materials make it possible to have a clear understanding of what your strong points and weak points are and at the same time, you can learn comprehensively about the GICSP exam and pass it easily.

## GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q69-Q74):

**NEW QUESTION # 69**
Which resource includes a standardized categorization of common software vulnerabilities?

- A. CWE
- B. CIP
- C. CVSS
- D. CSC

**Answer: A**

Explanation:
The Common Weakness Enumeration (CWE) (A) is a comprehensive list and taxonomy of common software weaknesses and vulnerabilities. It provides standardized names and definitions that help organizations identify and mitigate software security issues.
CVSS (B) is a scoring system used to rate the severity of vulnerabilities but does not categorize them.
CSC (C) refers to Critical Security Controls, a set of best practices, not a vulnerability catalog.

CIP (D) relates to Critical Infrastructure Protection standards, not vulnerability taxonomy.
GICSP includes CWE as an essential resource for understanding and classifying software vulnerabilities within ICS.

## NEW QUESTION # 70

Which type of process is described below?

- A. Discrete
- B. Batch
- C. Continuous
- D. Distributed

**Answer: A**

Explanation:
The process described involves transforming raw rolled stock into discrete products-bearings-by stamping them at Station A.
This is characteristic of a discrete process (D), where distinct, countable items are produced (bearings), typically involving individual units or assemblies.
Batch processes (C) involve processing material in defined lots or batches, but the emphasis here is on individual item production.
Continuous processes (B) run nonstop with materials continuously flowing, common in chemical plants but not in stamping.
Distributed (A) refers to control architecture rather than process type.
GICSP defines discrete manufacturing processes as producing distinct items, requiring specific cybersecurity considerations around control logic and equipment.

## NEW QUESTION # 71

What do the following protocols have in common?

- A. Use of IPv6 in the network layer
- B. Use in RF mesh networks
- C. Ability to use asymmetric join methods
- D. Ability to tunnel legacy protocols

**Answer: B**

Explanation:
WirelessHART, ISA100.11a, and ZigBee are all wireless communication protocols commonly used in industrial automation and control systems. A key characteristic they share is:
They use RF (Radio Frequency) mesh networking (B) to enable devices to communicate through multiple hops, improving reliability and coverage. Mesh networks allow devices to relay messages, creating a robust wireless infrastructure.
Use of IPv6 (A) is specific to some protocols but not common to all three.
Asymmetric join methods (C) and tunneling legacy protocols (D) are not shared features of all three.
The GICSP materials emphasize mesh network topology as a key feature of these protocols in enabling reliable and secure wireless ICS communications.

## NEW QUESTION # 72

Which of the following is a facilitated tabletop exercise that is run in odd years and provides an overall public Lessons Learned report each year it is run?

- A. CRPA
- B. E-ISAC
- C. CTEP
- D. GridEx

**Answer: D**

Explanation:
GridEx (C) is a major, biennial cybersecurity exercise coordinated by the North American Electric Reliability Corporation (NERC) and other stakeholders. It typically occurs in odd years and involves multiple entities from across the grid, simulating large-scale cyber and physical attacks.
GridEx exercises culminate in a public Lessons Learned report to improve preparedness.
CRPA (A) and CTEP (D) are different programs/exercises, and E-ISAC (B) is the Electricity Information Sharing and Analysis Center, not an exercise.
GICSP recognizes GridEx as a critical event for testing incident response capabilities in ICS sectors.

# NEW QUESTION # 73
What type of physical security control is a procedure that details what to do in the event of a security breach?

- A. Delaying
- B. Deterrence
- C. Detective
- D. Responsive

**Answer: D**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
A responsive physical security control refers to actions or procedures implemented after a security breach or incident has been detected, guiding how personnel should respond to minimize damage and restore security.
Procedures outlining what to do during or after a breach fall into this category (A).
Detective controls (B) identify or detect intrusions but do not specify response steps.
Delaying controls (C) slow down an attacker physically.
Deterrence (D) aims to discourage attackers from attempting intrusion.
GICSP emphasizes responsive controls as part of a comprehensive security program, including physical security incident response plans.
