## 100% Pass Quiz AWS-Solutions-Associate - AWS Certified Solutions Architect - Associate (SAA-C03) –Efficient Visual Cert Test

So many of our worthy customers have achieved success not only on the career but also on the life style due to the help of our AWS-Solutions-Associate study guide. You can also join them and learn our AWS-Solutions-Associate learning materials. You will gradually find your positive changes after a period of practices. Then you will finish all your tasks excellently. You will become the lucky guys if there has a chance. Our AWS-Solutions-Associate Exam Braindumps are waiting for you to have a try.

## Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q299-Q304):

### NEW QUESTION # 299

A company needs the ability to analyze the log files of its proprietary application. The logs are stored in JSON format in an Amazon S3 bucket. Queries will be simple and will run on-demand. A solutions architect needs to perform the analysis with minimal changes to the existing architecture. What should the solutions architect do to meet these requirements with the LEAST amount of operational overhead?

- A. Use Amazon CloudWatch Logs to store the logs. Run SQL queries as needed from the Amazon CloudWatch console.
- **B. Use Amazon Athena directly with Amazon S3 to run the queries as needed.**
- C. Use Amazon Redshift to load all the content into one place and run the SQL queries as needed.
- D. Use AWS Glue to catalog the logs. Use a transient Apache Spark cluster on Amazon EMR to run the SQL queries as needed.

**Answer: B**

Explanation:

Amazon Athena can be used to query JSON in S3

### NEW QUESTION # 300

A company stores critical data in Amazon DynamoDB tables in the company's AWS account. An IT administrator accidentally deleted a DynamoDB table. The deletion caused a significant loss of data and disrupted the company's operations. The company wants to prevent this type of disruption in the future.

Which solution will meet this requirement with the LEAST operational overhead?

- A. Enable point-in-time recovery on the DynamoDB tables.
- B. Create a backup and restore plan for the DynamoDB tables. Recover the DynamoDB tables manually.
- **C. Configure deletion protection on the DynamoDB tables.**
- D. Configure a trail in AWS CloudTrail. Create an Amazon EventBridge rule for delete actions. Create an AWS Lambda function to automatically restore deleted DynamoDB tables.

**Answer: C**

Explanation:

Deletion protection is a feature of DynamoDB that prevents accidental deletion of tables. When deletion protection is enabled, you cannot delete a table unless you explicitly disable it first. This adds an extra layer of security and reduces the risk of data loss and operational disruption. Deletion protection is easy to enable and disable using the AWS Management Console, the AWS CLI, or the DynamoDB API. This solution has the least operational overhead, as you do not need to create, manage, or invoke any additional resources or services. References:

Using deletion protection to protect your table

Preventing Accidental Table Deletion in DynamoDB

Amazon DynamoDB now supports table deletion protection

### NEW QUESTION # 301

A company is building a new data analysis application that will ingest large volumes of data into an Amazon S3 bucket. The company is concerned that sensitive information, such as personally identifiable information (PII), might be included in some of the data that is ingested. The company needs a solution that will scan for sensitive data and log the findings.

What should a solutions architect recommend to meet these requirements?

- A. Deploy Amazon QuickSight to scan the ingested data. Configure QuickSight to log findings to Amazon CloudWatch if QuickSight finds any sensitive data.
- **B. Create a series of AWS Lambda functions to call Amazon Macie to perform scans of the ingested data. If Macie finds any sensitive data, invoke a Lambda function to write findings to Amazon CloudWatch.**
- C. Create a series of AWS Lambda functions to call Amazon GuardDuty to perform scans of the ingested data. If GuardDuty finds any sensitive data, invoke a Lambda function to write findings to Amazon CloudWatch.
- D. Deploy Amazon Inspector to scan the ingested data. Configure Amazon Inspector to log findings to Amazon CloudWatch if Amazon Inspector finds any sensitive data.

**Answer: B**

### NEW QUESTION # 302

A Solutions Architect must design a storage solution for incoming billing reports in CSV format.

The data does not need to be scanned frequently and is discarded after 30 days.

Which service will be MOST cost-effective in meeting these requirements?

- A. Import the logs into an RDS MySQL instance.
- B. Use AWS Data Pipeline to import the logs into a DynamoDB table.
- C. Import the logs to an Amazon Redshift cluster
- **D. Write the files to an S3 bucket and use Amazon Athena to query the data.**

**Answer: D**

Explanation:

<https://aws.amazon.com/cn/athena/>

### NEW QUESTION # 303

What is Amazon Glacier?

- A. It's a security tool that allows to "freeze" an EC2 instance and perform computer forensics on it.
- **B. A low-cost storage service that provides secure and durable storage for data archiving and backup.**
- C. A security tool that allows to "freeze" an EBS volume and perform computer forensics on it.
- D. You mean Amazon "Iceberg": it's a low-cost storage service.

**Answer: B**

### NEW QUESTION # 304
