

# **Analytics-Con-301 Test Pdf, Latest Analytics-Con-301 Exam Labs**

**BONUS!!!** Download part of Prep4sures Analytics-Con-301 dumps for free: [https://drive.google.com/open?id=1-TDEpf-6Qw08n3P2DviMXh\\_27eOTfhrC](https://drive.google.com/open?id=1-TDEpf-6Qw08n3P2DviMXh_27eOTfhrC)

Our three kinds of Analytics-Con-301 real exam includes the new information that you need to know to pass the test. PDF version is full of legible content to read and remember, support customers' printing request, Software version of Analytics-Con-301 practice materials supports simulation test system, and several times of setup with no restriction. App online version of Analytics-Con-301 Learning Engine is suitable to all kinds of digital devices and offline exercise. You will find your favorite one if you have a try!

Studies show that some new members of the workforce are looking for more opportunity to get promoted but get stuck in an awkward situation, because they have to make use of their fragment time and energy to concentrate on Analytics-Con-301 exam preparation. Our Analytics-Con-301 exam materials embrace much knowledge and provide relevant exam bank available for your reference, which matches your learning habits and produces a rich harvest of the exam knowledge. You can not only benefit from our Analytics-Con-301 Exam Questions, but also you can obtain the Analytics-Con-301 certification.

## **Analytics-Con-301 Practice Training - Analytics-Con-301 Free Download & Analytics-Con-301 Updated Torrent**

The Salesforce Analytics-Con-301 practice exam software also has a feature to track all of the scores you earned this whole time. If your scores don't seem to be satisfying, we encourage you to repeat the learning process and then take another session of Salesforce Analytics-Con-301 practice exam questions simulation. As explained before, the Analytics-Con-301 practice Q&A comes in two different formats. The installable one is installable on any Windows computer without requiring an internet connection. Salesforce Analytics-Con-301 Practice exam software allows you to take the tests multiple times without any recurring questions. At the end of every Analytics-Con-301 Practice Test, you will see your score on the screen. Whenever there is a change in the Salesforce Analytics-Con-301 exam syllabus our subject matter experts updates the Salesforce exam questions according to it. The sooner you start preparing, the higher your chance to excel on your Salesforce Certified Tableau Consultant Analytics-Con-301 exam. Don't gamble your future. Get a grab on the Salesforce Analytics-Con-301 braindumps questions for the Salesforce Certified Tableau Consultant exam to boost your career!.

## **Salesforce Certified Tableau Consultant Sample Questions (Q61-Q66):**

### **NEW QUESTION # 61**

Sales managers use a daily extract from Snowflake to see the previous day's snapshot.

Sales managers should only see statistics for their direct reports.

The company has Tableau Data Management on Tableau Cloud.

A consultant must design a centralized, low-maintenance RLS strategy.  
What should the consultant implement?

- A. Dynamic user filter
- B. Built-in RLS security in Snowflake
- C. Manual user filter
- D. Data policy

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The key requirements:

- \* Tableau Cloud
- \* Extracts (not live data)
- \* Need RLS
- \* Want low maintenance
- \* Have Tableau Data Management

These requirements point directly to:

Data Policies (Virtual Connections RLS)

Tableau Data Management enables Virtual Connections and Data Policies, which provide:

- \* Centralized row-level security
- \* Integration with user identity via USERNAME()
- \* Reusable RLS logic across all downstream workbooks
- \* Works with extracts, unlike database RLS
- \* Minimal long-term maintenance

This is Tableau's recommended enterprise RLS method for Tableau Cloud with extracts.

Why the other options are incorrect:

A). Built-in RLS in Snowflake

Only works with live connections.

This client uses daily extracts, so database RLS is bypassed.

C). Manual user filter

High maintenance, must be edited manually per user - not scalable.

D). Dynamic user filter

Functional but must be recreated in each workbook, not centralized.

More maintenance than a data policy.

Therefore, Data Policy is the only low-maintenance, centralized RLS solution.

- \* Data Policies and Virtual Connections documentation describing centralized RLS
- \* Tableau Cloud & Extracts guidelines showing that database RLS cannot be reused
- \* RLS strategy best practices recommending Data Policies for scalable governance

## NEW QUESTION # 62

A client's fiscal calendar runs from February 1 through January 31.

How should the consultant configure Tableau to use the client's fiscal calendar when building date charts?

- A. Edit the data source Date Properties, then update the Default Properties of the Date Fields.
- B. Right click on the Date axis in charts and select Use Fiscal Calendar.
- C. Create Calculated Fields using the FISCALQUARTER() and FISCALYEAR() functions.
- D. Edit the data source and set the Fiscal Year in the data preview window.

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Tableau allows fiscal calendars to be defined at the data source level, affecting how all date fields behave across the workbook.

According to Tableau documentation:

- \* Fiscal calendars must be set using Data Source Date Properties.
- \* Once set, this becomes a default property for all date fields unless overridden.
- \* This allows charts, hierarchies, and date parts to automatically follow the fiscal year starting in February.

Correct procedure:

- \* Go to Data Source.
- \* Open Date Properties.
- \* Set Fiscal Year Start = February.
- \* (Optional) Adjust Date Field Default Properties.

This ensures all charts and date hierarchies use the fiscal calendar automatically.

Why the other options are incorrect:

- A). Right-click on axis # Use Fiscal Calendar

This option does not exist in Tableau.

- B). Set Fiscal Year in Data Preview

Not supported; fiscal configuration isn't made in the preview window.

- C). Use FISCALYEAR() / FISCALQUARTER()

This is manual, requires custom fields, and does not configure Tableau's built-in fiscal calendar system.

This is more work and not the correct method.

Only Option D configures the fiscal calendar globally and correctly.

- \* Tableau Date Properties documentation specifying fiscal year settings.

- \* Default Properties configuration for date fields.

- \* Official guidance for implementing fiscal calendars.

### NEW QUESTION # 63

A client notices that while creating calculated fields, occasionally the new fields are created as strings, integers, or Booleans. The client asks a consultant if there is a performance difference among these three data types.

What should the consultant tell the customer?

- A. Integers are fastest, followed by Booleans, and then strings.
- B. Strings, integers, and Booleans all perform the same.
- C. Booleans are fastest, followed by integers, and then strings.
- D. Strings are fastest, followed by integers, and then Booleans.

#### Answer: A

Explanation:

In Tableau, the performance of calculated fields can vary based on the data type used. Calculations involving integers and Booleans are generally faster than those involving strings. This is because numerical operations are typically more efficient for a computer to process than string operations, which can be more complex and time-consuming. Therefore, when performance is a consideration, it is advisable to use integers or Booleans over strings whenever possible.

References: The performance hierarchy of data types in Tableau calculations is documented in resources that discuss best practices for optimizing Tableau performance1.

### NEW QUESTION # 64

A client calculates the percent of total sales for a particular region compared to all regions.

The Sales percentage is inadvertently recalculated each time the filter is applied to the Region.

Which calculation should fix the automatic recalculation on the % of total field?

- A. {FIXED [Region]: SUM([Sales])} / SUM([Sales])
- B. {FIXED [Region]: SUM([Sales])} / {FIXED :SUM([Sales])}
- C. {FIXED [Region]: SUM([Sales])}
- D. {FIXED [Region]: SUM([Sales])} / { [Sales] }

#### Answer: B

Explanation:

The problem:

The client wants:

Percent of total sales for each region compared to ALL regions, even when Region is filtered.

However, the calculation currently behaves like a table calculation:

$\text{SUM}([\text{Sales}]) / \text{TOTAL}(\text{SUM}([\text{Sales}]))$

This recalculates the total after Region filters are applied, so removing a region changes the denominator.

Tableau Documentation - How to prevent recalculation:

To keep percent-of-total unchanged when filtering, Tableau's recommended method is to use FIXED LOD expressions to lock the granularity.

Two values must be fixed:

\* Numerator: Sales for that specific region{ FIXED [Region] : SUM([Sales]) }

\* Denominator: Total sales across all regions, independent of filters{ FIXED : SUM([Sales]) }(FIXED with no dimension = entire data set) Then compute the percentage:

{ FIXED [Region] : SUM([Sales]) } / { FIXED : SUM([Sales]) }

This ensures:

\* The region sales remain accurate.

\* The overall total remains constant, even if filters remove regions.

\* Region filtering no longer recalculates percent-of-total.

Why the other options are incorrect:

A). {FIXED [Region]: SUM([Sales])} / SUM([Sales])

The denominator is still affected by filters # recalculates % of total.

B). {FIXED [Region]: SUM([Sales])} / { [Sales] }

{[Sales]} is not valid syntax and does not fix granularity.

D). {FIXED [Region]: SUM([Sales])}

This gives only the numerator - no percent-of-total calculation.

The only correct LOD solution is option C.

\* Tableau LOD Expression Guide: FIXED for filter-independent calculations.

\* Tableau Percent-of-Total Best Practices: use FIXED LOD to avoid recalculation when filters change.

\* Order of Operations: FIXED LODs occur before dimension filters, keeping totals stable.

## NEW QUESTION # 65

A customer migrated from Tableau Server to Tableau Cloud. However, there is still private network data behind the corporate firewall that Tableau Cloud needs to access securely.

Which data connection strategy should a Tableau consultant advise with minimal software maintenance by the customer?

- A. Tableau Bridge
- B. Direct Connect
- **C. Data Connect**
- D. Private Connect

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The question focuses on two key requirements:

\* Tableau Cloud must access private network data behind a corporate firewall.

\* The customer wants minimal software maintenance.

To determine the correct answer, each option must be evaluated based on Tableau's official documented behavior.

Why Option A (Tableau Bridge) Is Not the Best Answer

Tableau Bridge is described in Tableau documentation as a self-managed solution used to connect Tableau Cloud to private network/on-premises data.

Key characteristics of Bridge include:

\* It is installed and maintained by the customer on a machine behind the firewall.

\* It requires ongoing updates, monitoring, and administration by the customer.

Because the question specifically asks for minimal software maintenance, Bridge does not meet the requirement.

Why Option B (Private Connect) Is Not the Best Answer

Private Connect is a feature allowing Tableau Cloud to connect privately and securely to AWS-hosted cloud data sources using private networking.

However:

\* It is primarily intended for AWS-based data services (such as Snowflake on AWS, Amazon Redshift, Athena).

\* The question describes private network data behind a corporate firewall, which usually refers to on-premises data, not cloud-hosted AWS services.

\* Therefore, Private Connect is not the generally applicable solution for the scenario described.

Why Option C (Direct Connect) Is Incorrect

"Direct Connect" is not an official Tableau Cloud feature for connecting to private network data.

This option can be eliminated immediately.

## Why Option D (Data Connect) Is the Correct Answer

Tableau's Data Connect service is documented as:

- \* A solution that provides secure access to private network or on-premises data, similar in purpose to Bridge.
- \* A remotely managed, monitored, and streamlined solution where Tableau manages the underlying Kubernetes cluster.
- \* A service that reduces administrative overhead for the customer by allowing Tableau to handle cluster management, monitoring, and maintenance.

Tableau documentation clearly states:

- \* Data Connect provides access to private network data similar to Bridge.
- \* But unlike Bridge, it is designed to reduce the overhead of administration because Tableau remotely manages and maintains the cluster used to provide connectivity.
- \* It follows a shared responsibility model where the customer provides compute resources, and Tableau manages the software layer-including maintenance and monitoring.

This directly satisfies the scenario's requirement:

"Minimal software maintenance by the customer."

Thus, among the options provided, Data Connect is the correct and most appropriate answer.

## References From Tableau Consultant / Study Materials

- \* Tableau documentation describing Tableau Bridge as a self-managed proxy client installed behind the firewall.
- \* Tableau documentation describing Data Connect as a remotely managed, monitored, and streamlined solution for accessing private network data.
- \* Tableau documentation explaining the shared responsibility model for Data Connect, where Tableau handles cluster management and reduces the customer's administrative overhead.
- \* Tableau materials comparing Bridge vs. Data Connect, stating that Data Connect reduces administration and enables more scalable private network connectivity.
- \* Tableau information noting that Private Connect is designed for AWS-hosted cloud data, not general private network on-premises data.

## NEW QUESTION # 66

.....

Prep4sures Salesforce Analytics-Con-301 Dumps are an indispensable material in the certification exam. It is no exaggeration to say that the value of the certification training materials is equivalent to all exam related reference books. After you use it, you will find that everything we have said is true.

**Latest Analytics-Con-301 Exam Labs:** <https://www.prep4sures.top/Analytics-Con-301-exam-dumps-torrent.html>

Then our Analytics-Con-301 study materials can give you some guidance for our professional experts have done all of these above matters for you by collecting the most accurate questions and answers, Salesforce Analytics-Con-301 Test Pdf We have made classification to those faced with various difficulties carefully & seriously, If you don't know what materials you should use, you can try Latest Analytics-Con-301 Exam Labs - Salesforce Certified Tableau Consultant study torrent.

Unless technology makes itself necessary to all that, people can pretty Analytics-Con-301 Official Cert Guide well get by without it, While most are focused on teaching the absolute beginner how to program in Python, others are more advanced.

## Best Salesforce Analytics-Con-301 test training guide

Then our Analytics-Con-301 Study Materials can give you some guidance for our professional experts have done all of these above matters for you by collecting the most accurate questions and answers.

We have made classification to those faced with various difficulties Analytics-Con-301 carefully & seriously, If you don't know what materials you should use, you can try Salesforce Certified Tableau Consultant study torrent.

If there is any update about Analytics-Con-301 Salesforce Certified Tableau Consultant test practice material, our system will send it to your payment email automatically, We sincerely will protect your interests in our Analytics-Con-301 practice questions from any danger.
