GAQM Certified Business Continuity Professional (CBCP) Sample Questions (Q23-Q28):

NEW QUESTION # 23

There are several reasons why a company would develop and implement a business continuity plan. Which of the following properly describes the best reason?

- A. To increase liability
- **B. The continuation of a company**
- C. Compliance with regulations
- D. Properly react to disasters

Answer: B

Explanation:

The primary reason for developing and implementing a business continuity plan is to ensure the continuation of a company's critical functions and processes in the face of a disruption that may otherwise cause severe losses or damage to the company's reputation, assets, customers, or stakeholders. A business continuity plan can help a company to resume operations as quickly as possible after a

disruption, minimize the impact on its performance and profitability, protect its brand and image, and fulfill its legal and contractual obligations.

NEW QUESTION # 24

A disaster can also be declared for an illness pandemic where a significant portion of employees are sick.

- A. True
- B. False

Answer: A

Explanation:

A disaster can also be declared for an illness pandemic where a significant portion of employees are sick. This is true because an illness pandemic is a type of natural disaster that can affect an organization's ability to continue its normal operations. An illness pandemic can cause absenteeism, reduced productivity, increased costs, supply chain disruptions, customer dissatisfaction, or regulatory compliance issues. Therefore, an organization may need to declare a disaster and activate its business continuity and disaster recovery plan if an illness pandemic impacts its critical functions and processes beyond an acceptable level.

NEW QUESTION # 25

Which type of risks result from business decisions that are influenced by changes in markets, liquidity changes and credit risks?

- A. Strategic
- B. Operational
- C. Technical
- D. Financial

Answer: D

Explanation:

Financial risks are the risks that result from business decisions that are influenced by changes in markets, liquidity, and credit.

Financial risks are the uncertainties or variabilities of the financial performance or position of an organization due to factors such as interest rates, exchange rates, inflation, credit ratings, debt levels, or cash flows. Financial risks can affect an organization's profitability, solvency, liquidity, or valuation.

NEW QUESTION # 26

Damage assessment includes all but which of the following steps?

- A. Identifying the affected business functions.
- B. Evaluating the time to restore operations and if greater than the MTD, a disaster should be declared and BCP enacted
- C. Estimate the time it will take to restore critical business functions.
- D. Having the insurance company declare the total extent of the damages.

Answer: D

Explanation:

Damage assessment is the process of evaluating the extent and severity of the damage caused by a disruption to an organization's facilities, equipment, systems, data, records, or personnel. It includes identifying the affected business functions and processes, estimating the time it will take to restore them to normal or acceptable levels of operation, and evaluating whether the recovery time exceeds the maximum tolerable downtime (MTD) for each function or process. If so, a disaster should be declared and the business continuity plan should be activated. Having the insurance company declare the total extent of the damages is not part of the damage assessment process, as it may take longer than the MTD and may not reflect the operational impact of the damage.
