New CloudSec-Pro Practice Questions & Reliable CloudSec-Pro Braindumps Sheet

The authoritative, efficient, and thoughtful service of CloudSec-Pro learning question will give you the best user experience, and you can also get what you want with our CloudSec-Pro study materials. I hope our study materials can accompany you to pursue your dreams. If you can choose CloudSec-Pro test guide, we will be very happy. We look forward to meeting you. You can choose your favorite our study materials version according to your feelings. When you use CloudSec-Pro Test Guide, you can also get our services at any time. We will try our best to solve your problems for you. I believe that you will be more inclined to choose a good service product, such as CloudSec-Pro learning question. After all, everyone wants to be treated warmly and kindly, and hope to learn in a more pleasant mood.

Palo Alto Networks Cloud Security Professional Sample Questions (Q245-Q250):

NEW QUESTION # 245

What is the most reliable and extensive source for documentation on Prisma Cloud APIs?

- A. prisma.pan.dev
- B. Live Community
- C. docs.paloaltonetworks.com
- D. Prisma Cloud Administrator's Guide

Answer: A

Explanation:

Prisma Cloud's API documentation and extensive developer resources are primarily hosted on prisma.pan.dev, which is Palo Alto Networks' developer portal. This site offers comprehensive guides, API references, and resources for developers to integrate, automate, and extend the capabilities of Prisma Cloud within their applications and workflows. While docs.paloaltonetworks.com provides official product documentation, and Prisma Cloud Administrator's Guide offers in-depth administrative guidance, prisma.pan.dev is specifically designed to serve as the hub for API documentation and developer resources. The Live Community is another valuable resource for peer support and discussions but is not the primary source for API documentation.

NEW QUESTION # 246

What are two built-in RBAC permission groups for Prisma Cloud? (Choose two.)

- A. Group Admin
- B. [Account Group Admin](#)
- C. Account Group Read Only
- D. [Group Membership Admin](#)

Answer: B,D

Explanation:

Prisma Cloud includes built-in Role-Based Access Control (RBAC) permission groups to manage user access and permissions efficiently. Among the options, Group Membership Admin and Account Group Admin are two built-in RBAC permission groups. Group Membership Admins are responsible for managing user memberships within groups, while Account Group Admins have administrative privileges over specific account groups, allowing them to manage resources and policies within those groups. These roles help in delegating administrative tasks and enforcing the principle of least privilege.

NEW QUESTION # 247

Which method should be used to authenticate to Prisma Cloud Enterprise programmatically?

- A. basic authentication
- B. [access key](#)
- C. SAML
- D. single sign-on

Answer: B

Explanation:

To authenticate to Prisma Cloud Enterprise programmatically, the use of an access key is the most suitable method among the given options. Access keys, typically consisting of an Access Key ID and Secret Access Key, are used for programmatic calls to the Prisma Cloud API. This method enables secure, authenticated API requests to Prisma Cloud services without requiring manual user intervention, which is essential for automation and integration with CI/CD pipelines.

Reference to the use of access keys for programmatic access can often be found in the API documentation of cloud security platforms like Prisma Cloud. While specific documentation from Prisma Cloud is not directly quoted here, the general practice across cloud services (AWS, Azure, GCP) supports the use of access keys for API authentication, making it a verified approach for Prisma Cloud as well.

NEW QUESTION # 248

Which statement about build and run policies is true?

- A. The four main types of policies are: Audit Events, Build, Network, and Run.
- B. Every type of policy has auto-remediation enabled by default.
- **C. Build policies enable you to check for security misconfigurations in the IaC templates.**
- D. Run policies monitor network activities in the environment and check for potential issues during runtime.

Answer: C

Explanation:

A true statement about build and run policies is A. Build policies enable you to check for security misconfigurations in the IaC templates. This capability is crucial for identifying potential security issues early in the development process, allowing for proactive mitigation before deployment, thereby enhancing the overall security posture of the applications and infrastructure being developed.

NEW QUESTION # 249

The Prisma Cloud administrator has configured a new policy.

Which steps should be used to assign this policy to a compliance standard?

- **A. Edit the policy, go to step 3 (Compliance Standards), click + at the bottom, select the compliance standard, fill in the other boxes, and then click Confirm**
- B. Open the Compliance Standards section of the policy, and then save.
- C. Create the Compliance Standard from Compliance tab, and then select Add to Policy.
- D. Custom policies cannot be added to existing standards.

Answer: A

Explanation:

To assign a new policy to a compliance standard in Prisma Cloud, the administrator needs to edit the policy and navigate to the step where compliance standards are managed. By clicking the '+' button, the administrator can add the policy to a specific compliance standard, provide necessary details, and confirm the assignment. This integrates the custom policy into the chosen compliance standard, ensuring that compliance checks include the newly defined policy criteria.

NEW QUESTION # 250

.....

In this era of the latest technology, we should incorporate interesting facts, figures, visual graphics, and other tools that can help people read the Palo Alto Networks Cloud Security Professional (CloudSec-Pro) exam questions with interest.
