

100% Pass Quiz Salesforce - Analytics-Con-301 - High-quality Download Salesforce Certified Tableau Consultant Pdf

BTW, DOWNLOAD part of PassCollection Analytics-Con-301 dumps from Cloud Storage: https://drive.google.com/open?id=1HgUtraz3rNCCXR5RiTX1_PeOzobL7Lo

PassCollection Salesforce Analytics-Con-301 Practice Test dumps are doubtless the best reference materials compared with other Analytics-Con-301 exam related materials. If you still don't believe it, come on and experience it and then you will know what I was telling you was true. You can visit PassCollection.com to download our free demo. There are two versions of PassCollection dumps. The one is PDF version and another is SOFT version. You can experience it in advance. In this, you can check its quality for yourself.

Salesforce Analytics-Con-301 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Management: This part focuses on establishing governance and support for published content. Tableau Consultants are expected to manage data security, publish and maintain data sources and workbooks, and oversee content access. It includes applying governance best practices, using metadata APIs, and supporting administration functions to maintain data integrity and accessibility.
Topic 2	<ul style="list-style-type: none">• Business Analysis: This section of the exam measures skills of Tableau Consultants focusing on evaluating the current state of analytics within an organization. It covers mapping business needs to Tableau capabilities, translating analytical requirements to best practices in Tableau, and recommending appropriate deployment options like Tableau Server or Tableau Cloud. It also includes evaluating existing data structures for supporting business needs and identifying performance risks and opportunities.

Topic 3	<ul style="list-style-type: none"> IT Management: This domain measures skills related to managing Tableau environments. It includes planning server upgrades, recommending deployment solutions (on-premise or cloud), and ensuring alignment between technical and business requirements for analytics infrastructure. It also involves troubleshooting and optimizing system performance relevant to Tableau Server and Cloud deployments.
Topic 4	<ul style="list-style-type: none"> Data Visualization: This section evaluates the Tableau Consultant's ability to design effective visual analytics solutions. It involves creating dashboards and visual reports that enhance user understanding, employing techniques like dynamic actions and advanced chart types, and ensuring performance optimization for an interactive user experience.

Exam Analytics-Con-301 Duration, Analytics-Con-301 Examcollection

PassCollection provide a good after-sales service for all customers. If you choose to purchase PassCollection products, PassCollection will provide you with online service for 24 hours a day and one year free update service, which timely inform you the latest exam information to let you have a fully preparation. We can let you spend a small amount of time and money and pass the IT certification exam at the same time. Selecting the products of PassCollection to help you pass your first time Salesforce Certification Analytics-Con-301 Exam is very cost-effective.

Salesforce Certified Tableau Consultant Sample Questions (Q83-Q88):

NEW QUESTION # 83

A company's Tableau Cloud admin wants to maintain control over what content gets published to its site for viewers, while also supporting self-service for dashboard creators.

Which governance strategy should the admin implement?

- A. Allow dashboard creators to publish to their Personal Space and for site administrators to move content to projects.
- B. Maintain a separate sandbox site and use the Content Migration Tool to promote content between sites.
- C. Restrict users' permission to view data sources used in uncertified dashboards.
- **D. Create sandbox projects to contain ad hoc content and production projects for validated content.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Tableau's recommended content governance model for Server and Cloud emphasizes project-based separation between development ("sandbox") content and certified, production-ready content.

Key points from Tableau governance guidance:

* Organizations should define sandbox projects where creators can freely publish and iterate on workbooks and data sources.

* Once content is reviewed and validated, it is promoted into "production" projects that are designated for trusted content for viewers.

* This model allows self-service authoring while keeping tight control over what is exposed to broad viewer audiences.

Option A exactly reflects this model: sandbox projects for ad hoc content, and production projects for validated content.

Option B uses separate sites and the Content Migration Tool, which is heavier to manage and usually reserved for cross-environment moves (such as dev to prod), not necessary for basic project-level governance in a single Tableau Cloud site.

Option C relies on Personal Space. Tableau recommends Personal Space for private drafts, not as the main promotion path, and it is not the primary governance pattern for viewer-facing content.

Option D restricts data source viewing but does not provide a full governance strategy for managing ad hoc versus production dashboards.

Therefore, the correct strategy is sandbox projects plus production projects, which is option A.

* Tableau governance whitepapers describing sandbox versus production projects as a best-practice pattern.

* Tableau Cloud site administration guidance recommending project structure for self-service and controlled promotion of content.

NEW QUESTION # 84

A client has a published data source in Tableau Server and they want to revert to the previous version of the data source. The

solution must minimize the impact on users.
What should the consultant do to accomplish this task?

- **A. Select a previous version from Tableau Server, and then click Restore.**
- B. Delete and recreate the data source manually.
- C. Request that a server administrator restore a Tableau Server backup.
- D. Select a previous version from Tableau Server, download it, and republish that data source.

Answer: A

Explanation:

To minimize the impact on users when reverting to a previous version of a published data source in Tableau Server, the consultant should use the built-in revision history feature. By selecting a previous version from the revision history and clicking 'Restore', the data source will revert to that version without the need for a full server backup restoration or manual recreation of the data source. This process is quick and has the least amount of disruption to users.

References: The functionality and process for reverting to a previous version of a data source are outlined in Tableau's official documentation on working with content revisions¹. This feature is part of Tableau Server's capabilities to manage and maintain data sources effectively².

NEW QUESTION # 85

A business analyst is creating a view of the top 10 customers for each region. The analyst has set a "Top 10" filter on Customer Name. However, it did not display the top 10 customers per region, as shown in the image below.

Which type of filter should the business analyst add to filter for region?

- A. Table Calculation filter
- **B. Context filter**
- C. Extract filter
- D. Dimension filter

Answer: B

Explanation:

The issue occurs because of Tableau's Order of Operations.

Key Tableau logic:

- * Top N filters are a type of Dimension filter.
- * Dimension filters are evaluated after Context filters.
- * When you place Region on Filters (as a standard dimension filter), Tableau:
 - * First applies the Customer Name Top 10 filter across the entire data set, not per region.
 - * Then limits the view to the selected region(s).
 - * This results in seeing the global Top 10 customers, not the Top 10 per region.

How to fix it:

To force Tableau to compute Top 10 customers within each region, the Region filter must be applied before the Top N Customer filter.

This is done by making Region a Context Filter.

Effect of a Context Filter:

- * Context filters are executed before the Top N filter.
- * Region becomes the context.
- * Tableau then evaluates the Top 10 customers inside each region's subset of data.

This produces the correct "Top 10 customers per region".

Why the other options are incorrect:

A). Extract filter

Applies once when creating the extract; does not control Top N logic inside the workbook.

B). Dimension filter

This is what the analyst already has - and it causes the unwanted behavior because it happens after the Top N filter.

C). Table Calculation filter

Top N is not a table calculation; table calc filters cannot fix this problem.

Only the Context Filter changes the execution order so Top N works per region.

- * Tableau Order of Operations showing Context Filters applied before Top N filters.
- * Best practices recommending Context Filters when Top N must be computed within subcategories.
- * Filtering documentation explaining that Top N filters require context when additional dimensional filters are present.

NEW QUESTION # 86

A client has many published data sources in Tableau Server. The data sources use the same databases and tables. The client notices different departments give different answers to the same business questions, and the departments cannot trust the data. The client wants to know what causes data sources to return different data.

Which tool should the client use to identify this issue?

- A. Ask Data
- B. Tableau Prep Conductor
- C. Tableau Catalog
- D. Tableau Resource Monitoring Tool

Answer: C

Explanation:

The Tableau Catalog is part of the Tableau Data Management Add-on and is designed to help users understand the data they are using within Tableau. It provides a comprehensive view of all the data assets in Tableau Server or Tableau Online, including databases, tables, and fields. It can help identify issues such as data quality, data lineage, and impact analysis. In this case, where different departments are getting different answers to the same business questions, the Tableau Catalog can be used to track down inconsistencies and ensure that everyone is working from the same, reliable data source.

References: The recommendation for using Tableau Catalog is based on its features that support data discovery, quality, and governance, which are essential for resolving data inconsistencies across different departments¹².

When different departments report different answers to the same business questions using the same databases and tables, the issue often lies in how data is being accessed and interpreted differently across departments. Tableau Catalog, a part of Tableau Data Management, can be used to solve this problem:

Visibility: Tableau Catalog gives visibility into the data used in Tableau, showing users where data comes from, where it's used, and who's using it.

Consistency and Trust: It helps ensure consistency and trust in data by providing detailed metadata management that can highlight discrepancies in data usage or interpretation.

Usage Metrics and Lineage: It offers tools for tracking usage metrics and understanding data lineage, which can help in identifying why different departments might see different results from the same underlying data.

References:

Tableau Catalog Usage: The Catalog is instrumental in providing a detailed view of the data environment, allowing organizations to audit, track, and understand data discrepancies across different users and departments.

NEW QUESTION # 87

A consultant wants to improve the performance of reports by moving calculations to the data layer and materializing them in the extract.

Which calculation should the consultant use?

- A. $ZN([Sales]) * (1 - ZN([Discount]))$
- B. `CASE [Sector Parameter]
WHEN 1 THEN "green"
WHEN 2 THEN "yellow"`
- C. $POWER(ZN(SUM([Sales])),
LOOKUP(ZN(SUM([Sales])), FIRST()), ZN(1/(INDEX()-1)))
- 1$
- D. $SUM([Profit])/SUM([Sales])$

Answer: D

Explanation:

END

Explanation:

To improve performance by moving calculations to the data layer and materializing them in the extract, the consultant should choose calculations that benefit from pre-computation and significantly reduce the load during query time:

Aggregation-Level Calculation: The formula $SUM([Profit])/SUM([Sales])$ calculates a ratio at an aggregate level, which is ideal for pre-computation. Materializing this calculation in the extract means that the complex division operation is done once and stored, rather than being recalculated every time the report is accessed.

Performance Improvement: By pre-computing this aggregate ratio, Tableau can utilize the pre-calculated fields directly in

visualizations, which speeds up report loading and interaction times as the heavy lifting of data processing is done during the data preparation stage.

References:

Materialization in Extracts: This concept involves pre-calculating and storing complex aggregations or calculations within the Tableau data extract itself, improving performance by reducing the computational load during visualization rendering.

NEW QUESTION # 88

.....

The Salesforce Certified Tableau Consultant (Analytics-Con-301) practice tests have customizable time and Salesforce Certified Tableau Consultant (Analytics-Con-301) exam questions feature so that the students can set the time and Salesforce Certified Tableau Consultant (Analytics-Con-301) exam questions according to their needs. The Salesforce Certified Tableau Consultant (Analytics-Con-301) practice test questions are getting updated on the daily basis and there are also up to 1 year of free updates. Earning the Salesforce Certified Tableau Consultant (Analytics-Con-301) certification exam is the way to grow in the modern era with high-paying jobs.
