

# CompTIA CAS-004 PDF Dumps - Study Whenever You Want

P.S. Free & New CAS-004 dumps are available on Google Drive shared by TrainingDumps: [https://drive.google.com/open?id=1Zu6qju4vMKqIG\\_Q6ArytnwIScWX-cHa\\_](https://drive.google.com/open?id=1Zu6qju4vMKqIG_Q6ArytnwIScWX-cHa_)

CAS-004 guide torrent is authoritative. Over the years, our study materials have helped tens of thousands of candidates successfully pass the exam. CAS-004 certification training is prepared by industry experts based on years of research on the syllabus. These experts are certificate holders who have already passed the certification. They have a keen sense of smell for the test. Therefore, CAS-004 Certification Training is the closest material to the real exam questions. With our study materials, you don't have to worry about learning materials that don't match the exam content.

All the contents in CAS-004 training materials have three versions of APP, PC, and PDF. Buying CAS-004 exam torrent is equivalent to purchasing three books at the same time. That is other materials on the market that cannot satisfy you. If you buy a paper version of the material, it is difficult for you to create a test environment that is the same as the real test when you take a mock test, but CAS-004 exam questions provide you with a mock test system with timing and scoring functions, so that you will have the same feeling with that when you are sitting in the examination room. And if you buy the electronic version of the materials, it is difficult to draw marks on them, but CAS-004 Exam Questions provide you with a PDF version, so that you can print out the information, not only conducive to your mark, but also conducive to your memory of important knowledge. At the same time, any version of CAS-004 training materials will not limit the number of downloads simultaneous online users. You can study according to your personal habits and time schedules regardless of where and when.

## Hot CAS-004 Reliable Exam Question | Reliable CompTIA CAS-004 Latest Cram Materials: CompTIA Advanced Security Practitioner (CASP+) Exam

Our CAS-004 torrent prep can apply to any learner whether students or working staff, novices or practitioners with years of experience. To simplify complex concepts and add examples to explain anything that might be difficult to understand, studies on CAS-004 exam questions can easily navigate learning and become the master of learning. Our CAS-004 Exam Questions are committed to instill more important information with fewer questions and answers, so you can learn easily and efficiently in this process. Our CAS-004 training guide will be your best choice.

## CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q28-Q33):

### NEW QUESTION # 28

A small company needs to reduce its operating costs. vendors have proposed solutions, which all focus on management of the company's website and services. The Chief information Security Officer (CISO) insist all available resources in the proposal must be dedicated, but managing a private cloud is not an option. Which of the following is the BEST solution for this company?

- A. On-premises cloud service model
- **B. Single-tenancy SaaS**
- C. Multitenancy SaaS
- D. Community cloud service model

**Answer: B**

Explanation:

A single-tenancy SaaS solution is the best solution for this company. SaaS stands for software as a service, which is a cloud-based model that allows customers to access applications hosted by a provider over the internet. A single-tenancy SaaS solution means that the company has its own dedicated instance of the application and its underlying infrastructure, which offers more control, customization, and security than a multi-tenancy SaaS solution where multiple customers share the same resources. A single-tenancy SaaS solution also eliminates the need for managing a private cloud or an on-premises infrastructure. ### NEW QUESTION # 29

A company is implementing SSL inspection. During the next six months, multiple web applications that will be separated out with subdomains will be deployed.

Which of the following will allow the inspection of the data without multiple certificate deployments?

- A. Use a third-party CA.
- B. Include all available cipher suites.
- **C. Create a wildcard certificate.**
- D. Implement certificate pinning.

**Answer: C**

Explanation:

Explanation

A wildcard certificate is a certificate that can be used for multiple subdomains of a domain, such as \*.example.com. This would allow the inspection of the data without multiple certificate deployments, as one wildcard certificate can cover all the subdomains that will be separated out with subdomains. Including all available cipher suites may not help with inspecting the data without multiple certificate deployments, as cipher suites are used for negotiating encryption and authentication algorithms, not for verifying certificates.

Using a third-party CA (certificate authority) may not help with inspecting the data without multiple certificate deployments, as a third-party CA is an entity that issues and validates certificates, not a type of certificate.

Implementing certificate pinning may not help with inspecting the data without multiple certificate deployments, as certificate pinning is a technique that hardcodes the expected certificate or public key in the application code, not a type of certificate. Verified References:

### NEW QUESTION # 30

Which of the following controls primarily detects abuse of privilege but does not prevent it?

- A. Separation of duties
- B. Least privilege
- **C. Off-boarding**
- D. Job rotation

Answer: C

### NEW QUESTION # 31

A security engineer has been asked to close all non-secure connections from the corporate network. The engineer is attempting to understand why the corporate UTM will not allow users to download email via IMAPS. The engineer formulates a theory and begins testing by creating the firewall ID 58, and users are able to download emails correctly by using IMAP instead. The network comprises three VLANs:

- VLAN 30      Guest networks      192.168.20.0/25
- VLAN 20      Corporate user network      192.168.0.0/28
- VLAN 110      Corporate server network      192.168.0.16/29

The security engineer looks at the UTM firewall rules and finds the following:

Rule active	Firewall ID	Source	Destination	Ports	Action	TLS decryption
Yes	58	VLAN 20	15.22.33.45	143	Allow and log	Enabled
Yes	33	VLAN 30	Any	80, 443,	Allow and log	Disabled
Yes	22	VLAN 110	VLAN 20	Any	Allow and log	Disabled
No	21	VLAN 20	15.22.33.45	990	Allow and log	Disabled
Yes	20	VLAN 20	VLAN 110	Any	Allow and log	Enabled
Yes	19	VLAN 20	Any	993, 587	Allow and log	Enabled

Which of the following should the security engineer do to ensure IMAPS functions properly on the corporate user network?

- A. Confirm the email server certificate is installed on the corporate computers.
- B. Contact the email service provider and ask if the company IP is blocked.
- C. Create an IMAPS firewall rule to ensure email is allowed.
- D. Make sure the UTM certificate is imported on the corporate computers.

Answer: C

Explanation:

IMAPS (Internet Message Access Protocol Secure) is a protocol that allows users to access and manipulate email messages on a remote mail server over a secure connection. IMAPS uses SSL/TLS encryption to protect the communication between the client and the server. IMAPS uses port 993 by default. To ensure IMAPS functions properly on the corporate user network, the security engineer should create an IMAPS firewall rule on the UTM (Unified Threat Management) device that allows traffic from VLAN 10 (Corporate Users) to VLAN 20 (Email Server) over port 993. The existing firewall rules do not allow this traffic, as they only allow HTTP (port 80), HTTPS (port 443), and SMTP (port 25). References:

### NEW QUESTION # 32

#### SIMULATION

You are about to enter the virtual environment.

Once you have completed the item in the virtual environment, you will NOT be allowed to return to this item.

Click Next to continue.

#### Question and Instructions

DO NOT perform the following actions within the virtual environment. Making any of these changes will cause the virtual environment to fail and prevent proper scoring.

1. Disabling ssh
2. Disabling systemd
3. Altering the network adapter 172.162.0.0
4. Changing the password in the lab admin account

Once you have completed the item in the virtual environment, you will NOT be allowed to return to this item.

#### TEST QUESTION

This system was recently patched following the exploitation of a vulnerability by an attacker to enable data exfiltration.

Despite the vulnerability being patched, it is likely that a malicious TCP service is still running and the adversary has achieved persistence by creating a systemd service.

Examples of commands to use:

kill, killall

lsof

man, --help (use for assistance)

netstat (useful flags: a, n, g, u)

ps (useful flag: a)

systemctl (to control systemd)

Please note: the list of commands shown above is not exhaustive. All native commands are available.

#### INSTRUCTIONS

Using the following credentials:

Username: labXXXadmin

Password: XXXyyYzz!

Investigate to identify indicators of compromise and then remediate them. You will need to make at least two changes:

1. End the compromised process that is using a malicious TCP service.
2. Remove the malicious persistence agent by disabling the service's ability to start on boot.

#### Answer:

##### Explanation:

Use sudo before any command the password is the same password provided, everything in <> is not part of the command is variable. Sudo will show you every detail you need. First command

\$sudo netstat -nlt, this will show you ip, port, pid, name of task.

For added value you can also run \$sudo lsof -i :<port>. Now you need to find the service so you use \$sudo systemctl --

type=service | grep <name of task>, this will give you <something>.service my was <something>-resolve.service forgot the full name.

Suggest you do a \$sudo systemctl status <full name service> to compare. After all that lets kill it all, First kill the pid \$sudo kill -9 <pid>.

Then lets complete the second part \$sudo systemctl stop

<full name service>, follow by \$sudo systemctl disable <full name service>.

Now for the cream on the top you verify that is gone \$sudo netstat -nlt and \$sudo systemctl status <full name service>.
