

# HPE7-A02 Reliable Test Prep | HPE7-A02 Exam Preparation

P.S. Free 2026 HP HPE7-A02 dumps are available on Google Drive shared by Real4exams: <https://drive.google.com/open?id=1EF1aMHW0ib4gzT2ZjPn0VFmjYFCctRye>

Where there is a will, there is a way. As long as you never give up yourself, you are bound to become successful. We hope that our HPE7-A02 exam materials can light your life. People always make excuses for their laziness. It is time to refresh again. You will witness your positive changes after completing learning our HPE7-A02 Study Guide. Not only that you can learn more useful and latest professional knowledge, but also you can get the HPE7-A02 certification to have a better career.

To earn the HP HPE7-A02 Certification, candidates must have a solid foundation in network security concepts and protocols, as well as experience with Aruba products such as ClearPass, AirWave, and Mobility Master. HPE7-A02 exam covers a range of topics, including Aruba security solutions, network access control (NAC), wireless security, firewall technologies, and intrusion prevention systems (IPS).

HPE7-A02 certification is intended for individuals who work with Aruba products and technologies on a daily basis, including network administrators, security professionals, and wireless engineers. It is a valuable certification for those who are responsible for managing and securing wireless networks in enterprise environments.

## HP HPE7-A02 Exam Preparation | Associate HPE7-A02 Level Exam

In order to meet the needs of all customers that pass their exam and get related certification, the experts of our company have designed the updating system for all customers. Our HPE7-A02 exam question will be constantly updated every day. The IT experts of our company will be responsible for checking whether our HPE7-A02 ExamPrep is updated or not. Once our HPE7-A02 test questions are updated, our system will send the message to our customers immediately. If you use our HPE7-A02 exam prep, you will have the opportunity to enjoy our updating system and pass the HPE7-A02 exam.

## HP Aruba Certified Network Security Professional Exam Sample Questions (Q106-Q111):

### NEW QUESTION # 106

You have downloaded a packet capture that you generated on HPE Aruba Networking Central. When you open the capture in Wireshark, you see the output shown in the exhibit.

What should you do in Wireshark so that you can better interpret the packets?

- A. Choose to decode UDP port 5555 packets as ARUBA\_ERM and set the Aruba ERM Type to 0.
- B. Edit the Enabled Protocols and make sure that 802.11, GRE, and Aruba\_ERM are enabled.
- C. Apply the following display filter: wlan.fc.type == 1.
- D. Edit preferences for IEEE 802.11 and chose to ignore the Protection bit with IV.

**Answer: A**

Explanation:

To better interpret the packets shown in the Wireshark capture, you should choose to decode UDP port 5555 packets as ARUBA\_ERM and set the Aruba ERM Type to 0. This configuration will allow Wireshark to properly decode and display the Aruba-specific encapsulated remote mirroring (ERM) packets, providing a clearer understanding of the traffic.

1. Decoding Protocols: Selecting the correct protocol decoding in Wireshark ensures that the captured packets are interpreted correctly, displaying the relevant information.

2. Aruba ERM: The packets in the capture are likely encapsulated remote mirroring (ERM) packets specific to Aruba, which require proper decoding settings in Wireshark.

3. Clear Interpretation: By setting the Aruba ERM Type to 0 and decoding the packets as ARUBA\_ERM, you can view the encapsulated data accurately.

Reference: Wireshark documentation and Aruba network packet analysis guides provide instructions on setting protocol decoding options to accurately interpret specific types of network traffic, such as Aruba ERM packets.

### NEW QUESTION # 107

Which statement describes Zero Trust Security?

- A. Companies should focus on protecting their resources rather than on protecting the boundaries of their internal network.
- B. Companies can achieve zero trust security by strengthening their perimeter security to detect a wider range of threats.
- C. Companies that support remote workers cannot achieve zero trust security and must determine if the benefits outweigh the cost.
- D. Companies must apply the same access controls to all users, regardless of identity.

**Answer: A**

Explanation:

What is Zero Trust Security?

Zero Trust Security is a security model that operates on the principle of "never trust, always verify." It focuses on securing resources (data, applications, systems) and continuously verifying the identity and trust level of users and devices, regardless of whether they are inside or outside the network.

The primary aim is to reduce reliance on perimeter defenses and implement granular access controls to protect individual resources.

Analysis of Each Option

A). Companies must apply the same access controls to all users, regardless of identity:

Incorrect:

Zero Trust enforces dynamic and identity-based access controls, not the same static controls for everyone.

Users and devices are granted access based on their specific context, role, and trust level.

B). Companies that support remote workers cannot achieve zero trust security and must determine if the benefits outweigh the cost:

Incorrect:

Zero Trust is particularly effective for securing remote work environments by verifying and authenticating remote users and devices before granting access to resources.

The model is adaptable to hybrid and remote work scenarios, making this statement false.

C). Companies should focus on protecting their resources rather than on protecting the boundaries of their internal network:

Correct:

Zero Trust shifts the focus from perimeter security (traditional network boundaries) to protecting specific resources.

This includes implementing measures such as:

Micro-segmentation.

Continuous monitoring of user and device trust levels.

Dynamic access control policies.

The emphasis is on securing sensitive assets rather than assuming an internal network is inherently safe.

D). Companies can achieve zero trust security by strengthening their perimeter security to detect a wider range of threats:

Incorrect:

Zero Trust challenges the traditional reliance on perimeter defenses (firewalls, VPNs) as the sole security mechanism.

Strengthening perimeter security is not sufficient for Zero Trust, as this model assumes threats can already exist inside the network.

Final Explanation

Zero Trust Security emphasizes protecting resources at the granular level rather than relying on the traditional security perimeter, which makes C the most accurate description.

### NEW QUESTION # 108

You have installed an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch to monitor a particular function.

Which additional step must you complete to start the monitoring?

- A. Enable NAE, which is disabled by default.
- B. Reboot the switch.
- C. Create an agent from the script.
- D. Edit the script to define monitor parameters.

**Answer: C**

Explanation:

After installing an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch, the additional step required to start the monitoring is to create an agent from the script. The agent is responsible for executing the script and collecting the monitoring data as defined by the script parameters.

1. Script Installation: Installing the script provides the logic and parameters for monitoring.

2. Agent Creation: Creating an agent from the script activates the monitoring process, allowing the NAE to begin tracking the specified function.

3. Operational Step: This step ensures that the monitoring logic is applied and the data collection starts as per the script's configuration.

Reference: Aruba AOS-CX documentation and Network Analytics Engine guides outline the process of script installation and the necessity of creating an agent to activate monitoring.

### NEW QUESTION # 109

You have installed an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch to monitor a particular function.

Which additional step must you complete to start the monitoring?

- A. Enable NAE, which is disabled by default.
- B. Reboot the switch.
- C. Create an agent from the script.
- D. Edit the script to define monitor parameters.

**Answer: C**

Explanation:

After installing an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch, the additional step required to start the monitoring is to create an agent from the script. The agent is responsible for executing the script and collecting the monitoring data as defined by the script parameters.

1. Script Installation: Installing the script provides the logic and parameters for monitoring.

2. Agent Creation: Creating an agent from the script activates the monitoring process, allowing the NAE to begin tracking the specified function.

3. Operational Step: This step ensures that the monitoring logic is applied and the data collection starts as per the script's configuration.

### NEW QUESTION # 110

A company has HPE Aruba Networking APs running AOS-10 that connect to AOS-CX switches. The APs will: Authenticate as 802.1X supplicants to HPE Aruba Networking ClearPass Policy Manager (CPPM) Be assigned to the " APs " role on the switches Have their traffic forwarded locally What information do you need to help you determine the VLAN settings for the " APs " role?

- A. Whether the APs bridge or tunnel traffic on their SSIDs.
- B. Whether the APs have static or DHCP-assigned IP addresses.
- C. Whether the switches have established tunnels with an HPE Aruba Networking gateway.
- D. Whether the switches are using local user-roles (LURs) or downloadable user-roles (DURs).

**Answer: A**

Explanation:

Traffic Forwarding for APs:

In AOS-10, AP traffic forwarding can happen locally (bridged) or through tunnels to a gateway.

The VLAN settings on the " APs " role depend on whether the APs bridge the SSID traffic locally or forward it through a tunnel.

Option B: Correct. You need to know whether the traffic is bridged or tunneled to determine the VLAN assignments.

Option A: Incorrect. LURs/DURs affect role assignment but not VLAN settings for traffic forwarding.

Option C: Incorrect. Establishing tunnels with gateways is relevant to centralized traffic forwarding, not VLANs for bridged traffic.

Option D: Incorrect. AP IP addressing (static or DHCP) does not impact the VLAN for forwarded SSID traffic.

### NEW QUESTION # 111

.....

Our HPE7-A02 test guide is suitable for you whichever level you are in right now. Whether you are in entry-level position or experienced exam candidates who have tried the exam before, this is the perfect chance to give a shot. A growing number of exam candidates are choosing our HPE7-A02 Exam Questions, why are you still hesitating? As long as you have make up your mind, our Aruba Certified Network Security Professional Exam study question is available in five minutes, so just begin your review now! This could be a pinnacle in your life.
