

HPE6-A86 Test Assessment & Exam HPE6-A86 Dump

What's more, part of that UpdateDumps HPE6-A86 dumps now are free: <https://drive.google.com/open?id=1psNj5WqZkkOEGpUul85XgJBv5jZNaN8D>

Perhaps you worry about that you have difficulty in understanding our HPE6-A86 training questions. Frankly speaking, we have taken all your worries into account. Firstly, all knowledge of the HPE6-A86 exam materials have been simplified a lot. Also, we have tested many volunteers who can prove that after studying our HPE6-A86 Exam Questions for 20 to 30 hours, it is easy to pass the exam. The results show that our HPE6-A86 study materials are easy for them to understand. In addition, they all enjoy learning on our HPE6-A86 practice exam study materials.

HP HPE6-A86 reliable tes prep is the right study reference for your test preparation. The comprehensive HPE6-A86 questions & answers are in accord with the knowledge points of the real exam. Furthermore, HPE6-A86 sure pass exam will give you a solid understanding of how to conquer the difficulties in the real test. The mission of UpdateDumps HPE6-A86 PDF VCE is to give you the most valid study material and help you pass with ease.

Exam HPE6-A86 Dump - Customized HPE6-A86 Lab Simulation

Everyone has the right to pursue happiness and wealth. You can rely on the HPE6-A86 certificate to support yourself. If you do not own one or two kinds of skills, it is difficult for you to make ends meet in the modern society. After all, you can rely on no one but yourself. At present, our HPE6-A86 Study Materials can give you a ray of hope. Even you have no basic knowledge about the HPE6-A86 study materials. You still can pass the HPE6-A86 with the help of our HPE6-A86 learning guide.

HPE Network Switching Associate Exam Sample Questions (Q70-Q75):

NEW QUESTION # 70

What is considered a secure protocol?

- A. SNMPv3
- B. Telnet
- C. TFTP
- D. HTTP

Answer: A

Explanation:

The correct answer is D. SNMPv3. HPE Aruba Networking AOS-CX hardening documentation recommends using SNMPv3 instead of older SNMP versions because older SNMP versions are unauthenticated and unencrypted, with the community string

transmitted in plaintext. The same guide states that SNMPv3 supports different users, authentication, and strong encryption. This makes SNMPv3 the secure protocol among the options. HTTP is not the best answer because standard HTTP does not encrypt management or web traffic; HTTPS would be the secure alternative. TFTP is not secure because it does not provide encryption or strong authentication for file transfers. Telnet is also not secure because it sends session traffic, including login information, in clear text; SSH is the secure alternative for CLI management. Therefore, from the listed protocols, only SNMPv3 provides security mechanisms appropriate for secure network management, including authenticated and encrypted communication.

NEW QUESTION # 71

You are testing a Captive Portal for wired guest access and are seeing the self-signed certificate warning below.

Which statement is true?

- A. An enterprise CA signed certificate should be deployed.
- B. The self-signed CA should be imported into the trust store.
- C. A public CA signed certificate should be deployed.
- D. HTTPS should be disabled, and HTTP should be used instead.

Answer: C

Explanation:

The correct answer is A. A public CA signed certificate should be deployed. The browser warning appears because the captive portal is presenting a self-signed certificate that the client device does not trust. For guest access, client devices are usually unmanaged and cannot be expected to already trust an internal or self-signed certificate authority. HPE Aruba Networking documentation for captive portal deployments recommends that production environments obtain and install a certificate issued for the site or domain by a well-known Certificate Authority. This avoids browser trust warnings and gives guest users confidence that they are connecting to the correct portal. Option B is incorrect because disabling HTTPS and using HTTP would reduce security and expose portal traffic. Option C may work only for managed devices where the self-signed or private CA can be pushed into the trust store, but that is not practical for open wired guest access. Option D can be valid for internal managed users, but for guests, a public trusted CA certificate is the best answer.

NEW QUESTION # 72

A Support Technician is working with an Aruba CX 6400 Series chassis switch. The customer needs to add 10Gbps SFP+ connectivity to the switch.

What hardware component must be installed in the chassis to provide this physical port connectivity?

- A. A line card.
- B. A VSF stacking module.
- C. A management module.
- D. A redundant fan tray.

Answer: A

NEW QUESTION # 73

You are planning a 40Gbps link between two sites 35 km apart.

What type of cable will be required?

- A. UTP
- B. Single-mode fiber
- C. ZTP
- D. Multi-mode fiber

Answer: B

Explanation:

The correct answer is B. Single-mode fiber. A 35 km connection between two sites is a long-distance optical link, and single-mode fiber is the appropriate cable type for long-haul communication. HPE Aruba Networking transceiver documentation describes single-mode fiber as having a small core size and being suitable for long-haul communication because it transmits light in one mode and suffers less intermodal dispersion than multi-mode fiber. Multi-mode fiber is used for shorter-distance links inside buildings or data centers and is not the correct choice for a 35 km site-to-site connection. UTP copper cabling cannot support a 40Gbps Ethernet connection over 35 km. ZTP is Zero Touch Provisioning, not a cable type. HPE Aruba transceiver guidance also lists long-distance optical transceivers, such as 40 km single-mode fiber options, reinforcing that long-distance high-speed links require SMF rather than MMF or copper. Therefore, for a 40Gbps link between sites 35 km apart, the required cabling is single-mode fiber. (arubanetworking.hpe.com)

NEW QUESTION # 74

A network administrator is performing routine administrative tasks on an HPE Aruba Networking CX 6400 switch stack. They need to back up the current running configuration to a remote SFTP server for archival purposes. The administrator wants to follow best practices for file management.

Review the following command:

`copy running-config sftp://admin@10.1.1.5/configs/CX6400_backup.cfg vrf mgmt` Which statement accurately describes the outcome of executing this command?

- A. The running configuration will be securely copied to the specified directory on the SFTP server using the management VRF.
- B. The configuration will be copied in plain text, as SFTP only encrypts the authentication, not the data transfer itself.
- C. The command copies the startup configuration, not the running configuration, to the SFTP server.
- D. The command will fail because the `vrf mgmt` parameter is only used for TFTP transfers.

Answer: A

NEW QUESTION # 75

.....

As a top selling product in the market, our HPE6-A86 study materials have many fans. They are keen to try our newest version products even if they have passed the HPE6-A86 exam. They never give up learning new things. Every time they try our new version of the HPE6-A86 Study Materials, they will write down their feelings and guidance. Also, they will exchange ideas with other customers. They give our HPE6-A86 study materials strong support. So we are deeply moved by their persistence and trust.
