

# C\_BCSBS\_2502 Übungsmaterialien & C\_BCSBS\_2502 Lernführung: SAP Certified Associate - Positioning SAP Business Suite & C\_BCSBS\_2502 Lernguide

2026 Die neuesten ZertPruefung C\_BCSBS\_2502 PDF-Versionen Prüfungsfragen und C\_BCSBS\_2502 Fragen und Antworten sind kostenlos verfügbar: <https://drive.google.com/open?id=1GSTnhrsLNqRAfVGYVsTeFuE7Jxc6uZcp>

Wenn Sie ein Pendler sind, wenn Sie die SAP C\_BCSBS\_2502 Prüfung so schnell wie möglich bestehen möchten, dass ist ZertPruefung Ihre beste Wahl. Unser ZertPruefung bietet Ihnen die Testfragen und Antworten von SAP C\_BCSBS\_2502, die von den IT-Experten durch Experimente und Praxis erhalten werden und über IT-Zertifizierungserfahrungen über 10 Jahre verfügt. Mit ZertPruefung können Sie nicht nur Zeit sparen, sondern auch die SAP C\_BCSBS\_2502 Zertifizierungsprüfung leicht und zügig bestehen.

## SAP C\_BCSBS\_2502 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> <li>Positioning SAP Business Data Cloud: This section of the exam measures the skills of Enterprise Architects and covers the positioning and strategic use of SAP Business Data Cloud. It involves understanding how data from various sources is managed, governed, and accessed to support intelligent business operations. The section aims to equip professionals with the ability to explain data unification and connectivity through SAP's cloud-based data platform.</li> </ul>
Thema 2	<ul style="list-style-type: none"> <li>Discovering SAP Business AI: This section of the exam measures the skills of Digital Transformation Specialists and focuses on exploring how SAP Business AI enables smarter decision-making. It includes identifying AI-driven features embedded within SAP solutions and how they contribute to automation, predictions, and enhanced business outcomes. Professionals are expected to understand how to promote AI adoption in business processes using SAP's intelligent technologies.</li> </ul>
Thema 3	<ul style="list-style-type: none"> <li>Positioning SAP Business Suite: This section of the exam measures the skills of Solution Consultants and covers how to effectively position the SAP Business Suite within various business scenarios. It includes understanding the core value, capabilities, and strategic advantages of SAP's integrated business applications. The focus is on enabling consultants to align SAP Business Suite offerings with customer needs to support end-to-end processes.</li> </ul>

>> C\_BCSBS\_2502 Deutsch Prüfungsfragen <<

## C\_BCSBS\_2502 Testing Engine, C\_BCSBS\_2502 Deutsche Prüfungsfragen

Wenn Sie die Schulungsunterlagen zur SAP C\_BCSBS\_2502 Zertifizierungsprüfung haben, dann werden Sie sicherlich erfolgreich

sein. Nachdem Sie unsere Lehrbücher gekauft haben, werden Sie einjährige Aktualisierung kostenlos genießen. Die Bestehensrate von SAP C\_BCSBS\_2502 ist 100%. Wenn Sie die Zertifizierungsprüfung nicht bestehen oder die Schulungsunterlagen zur SAP C\_BCSBS\_2502 Zertifizierungsprüfung irgend ein Problem haben, geben wir Ihnen eine bedingungslose volle Rückerstattung.

## SAP Certified Associate - Positioning SAP Business Suite C\_BCSBS\_2502 Prüfungsfragen mit Lösungen (Q31-Q36):

### 31. Frage

What are some components of SAP Business AI?

Note: There are 3 correct answers to this question.

- A. Agility
- B. Technology foundation
- C. Customer centricity
- D. Processes
- E. Enterprise data

**Antwort: B,D,E**

Begründung:

The question asks for the components of SAP Business AI, which is a key pillar of SAP Business Suite that enables intelligent business processes through artificial intelligence. According to official SAP documentation, SAP Business AI is built on three core components: relevant business processes, enterprise data, and a technology foundation. These align with Options A, D, and E, making them the correct answers.

Explanation of Correct Answers:

Option A: Processes

This is correct because SAP Business AI is deeply embedded in business processes to deliver outcome-driven AI capabilities. SAP emphasizes that AI is integrated into end-to-end business processes (e.g., finance, supply chain, procurement) to enhance efficiency, automation, and decision-making. The Positioning SAP Business Suite documentation on [learning.sap.com](https://learning.sap.com) states:

"SAP Business AI is designed to deliver value by embedding AI into relevant business processes. This ensures that AI capabilities are context-aware and drive specific business outcomes, such as optimizing supply chain operations or automating financial reconciliations." For example, SAP Joule, the generative AI copilot, is integrated into processes across SAP S/4HANA Cloud and other SAP applications to provide real-time insights and recommendations. The documentation further notes:

"The process component of SAP Business AI refers to the integration of AI into core business workflows, enabling intelligent automation and process optimization." This confirms that processes are a foundational component of SAP Business AI.

Option D: Enterprise data

This is correct because SAP Business AI relies on enterprise data to train and execute AI models effectively.

SAP emphasizes the importance of harmonized, high-quality data from SAP and third-party sources, managed through solutions like SAP Datasphere, to power AI-driven insights. The documentation states:

"Enterprise data is a critical component of SAP Business AI, providing the foundation for training and deploying AI models. SAP Business AI leverages data from SAP applications, such as SAP S/4HANA, and external sources to deliver accurate and contextually relevant outcomes." For instance, SAP Business AI uses enterprise data to enable predictive analytics, anomaly detection, and personalized recommendations. The integration with SAP Business Data Cloud ensures that data is accessible and governed, supporting AI use cases. The documentation further clarifies:

"SAP Business AI is powered by enterprise data, harmonized through SAP Datasphere, to ensure that AI models are built on a trusted and unified data foundation." This establishes enterprise data as a core component.

Option E: Technology foundation

This is correct because SAP Business AI is underpinned by a robust technology foundation, including the SAP Business Technology Platform (BTP), which provides tools for AI development, deployment, and integration.

This foundation includes AI services, machine learning frameworks, and infrastructure for scalability. The documentation notes:

"The technology foundation of SAP Business AI, built on SAP Business Technology Platform (BTP), provides the infrastructure and tools needed to develop, deploy, and manage AI models. This includes prebuilt AI services, integration capabilities, and support for generative AI." For example, SAP BTP enables the integration of SAP Joule and other AI capabilities into SAP applications, while also supporting custom AI development through tools like the SAP AI Core. The documentation adds:

"SAP Business AI's technology foundation ensures scalability, security, and seamless integration with SAP and non-SAP systems, enabling customers to innovate with AI." This confirms that technology foundation is a key component.

Explanation of Incorrect Answers:

Option B: Agility

This is incorrect because agility is not a component of SAP Business AI. While agility may be an outcome or benefit of using SAP Business AI (e.g., enabling faster decision-making or adaptable processes), it is not a structural component. The documentation does not list agility as part of the core framework of SAP Business AI.

. Instead, it focuses on processes, data, and technology:

"SAP Business AI comprises three main components: relevant business processes, enterprise data, and a technology foundation. These elements work together to deliver intelligent business outcomes." Agility may be associated with the broader value proposition of SAP Business Suite or cloud ERP, but it is not specific to SAP Business AI.

Option C: Customer centricity

This is incorrect because customer centricity is not a component of SAP Business AI. While SAP Business AI can support customer-centric outcomes (e.g., personalized experiences through AI-driven insights), it is not a foundational component. The documentation emphasizes technical and operational components rather than strategic principles like customer centricity:

"SAP Business AI is built on a foundation of processes, data, and technology, enabling intelligent automation and insights across the enterprise." Customer centricity may be a guiding principle in SAP's go-to-market strategy or solution design, but it is not part of the SAP Business AI framework.

Summary:

SAP Business AI is composed of three core components: processes (embedding AI into business workflows), enterprise data (providing the data foundation for AI models), and technology foundation (enabling AI development and deployment via SAP BTP). These correspond to Options A, D, and E. Options B (agility) and C (customer centricity) are incorrect, as they represent outcomes or principles rather than structural components of SAP Business AI. This aligns with SAP's focus on delivering context-aware, data-driven, and technically robust AI capabilities within SAP Business Suite.

### 32. Frage

A global retail company is struggling with fragmented customer data across multiple departments, leading to inefficiencies in sales and service operations. They need an SAP solution that integrates customer interactions, optimizes sales processes, and enhances customer insights. Which SAP solutions should they implement? There are 3 correct answers to this question.

- A. SAP CRM
- B. SAP Ariba
- C. SAP Business Warehouse
- D. SAP Predictive Analytics
- E. SAP ERP

Antwort: A,C,D

### 33. Frage

What is the unique advantage of integrating SAP business applications and SAP BTP for end-to-end business process integration?

- A. Generation of trusted, business-critical data at its source
- B. Storage of centralized, harmonized data
- C. Collection of contextualized, accessible data
- D. Orchestration and enrichment of data coming from silos

Antwort: D

Begründung:

The question asks for the unique advantage of integrating SAP business applications (e.g., SAP S/4HANA Cloud, SAP SuccessFactors, SAP Ariba) with SAP Business Technology Platform (BTP) to achieve end-to-end business process integration. According to official SAP documentation, the primary advantage lies in the orchestration and enrichment of data coming from silos, which enables seamless, integrated business processes across disparate systems. This makes Option C the correct answer.

Explanation of Correct answer:

Option C: Orchestration and enrichment of data coming from silos

This is correct because SAP Business Technology Platform (BTP) serves as a unified platform that orchestrates and enriches data from siloed SAP and non-SAP applications, enabling end-to-end business process integration. SAP business applications often operate in silos, generating data specific to functions like finance, HR, or procurement. SAP BTP provides integration, extension, and AI capabilities to connect these silos, streamline processes, and enrich data with business context for holistic insights and automation. The Positioning SAP Business Suite documentation on [learning.sap.com](https://learning.sap.com) states:

"The unique advantage of integrating SAP business applications with SAP BTP is the orchestration and enrichment of data coming from silos. SAP BTP enables end-to-end business process integration by connecting disparate applications, harmonizing data, and

enriching it with AI-driven insights, process automation, and extensions to deliver seamless, intelligent workflows." For example, SAP BTP uses tools like SAP Integration Suite to connect SAP applications (e.g., SAP S/4HANA for ERP and SAP SuccessFactors for HR) and third-party systems, orchestrating data flows to support cross-functional processes like order-to-cash or hire-to-retain. Additionally, SAP BTP enriches this data with capabilities such as embedded AI (SAP Joule), analytics, and custom extensions, ensuring that processes are optimized and contextually relevant. The documentation further notes:

"SAP BTP breaks down data silos by orchestrating data across SAP and non-SAP systems, enriching it with business semantics and enabling intelligent, end-to-end processes that drive transformation." This orchestration and enrichment are critical for achieving the integrated, intelligent enterprise vision of SAP Business Suite, making Option C the unique advantage.

Explanation of Incorrect Answers:

Option A: Storage of centralized, harmonized data

This is incorrect because, while SAP BTP supports data harmonization through tools like SAP Datasphere, the storage of centralized, harmonized data is not the unique advantage for end-to-end business process integration.

Centralized data storage is a feature of data management solutions like SAP Datasphere, but the question focuses on process integration, which involves dynamic orchestration rather than static storage. The documentation clarifies:

"While SAP BTP supports data harmonization, its unique value for business process integration lies in orchestrating and enriching data across applications, not merely storing it centrally." This option is relevant to data management but not specific to the process integration advantage.

Option B: Generation of trusted, business-critical data at its source

This is incorrect because generating trusted, business-critical data at its source is a characteristic of SAP business applications themselves (e.g., SAP S/4HANA generates real-time transactional data), not the unique advantage of integrating them with SAP BTP. SAP BTP enhances this data through integration and enrichment, but it does not generate the data. The documentation states:

"SAP business applications generate trusted, business-critical data at the source. SAP BTP's role is to integrate and enrich this data across systems for end-to-end process orchestration, not to generate it." This option misattributes the data generation role to SAP BTP.

Option D: Collection of contextualized, accessible data

This is incorrect because, while SAP BTP enables contextualized and accessible data through its integration and analytics capabilities, this is a secondary outcome rather than the unique advantage for end-to-end business process integration. The primary focus is on orchestrating and enriching data to enable seamless processes, not just collecting it. The documentation notes:

"SAP BTP facilitates contextualized data access as part of its capabilities, but the unique advantage for process integration is the orchestration and enrichment of data from siloed sources to drive unified business workflows." This option is too general and does not fully capture the process-centric advantage.

Summary:

The unique advantage of integrating SAP business applications with SAP BTP for end-to-end business process integration is the orchestration and enrichment of data coming from silos, as stated in Option C. This enables seamless, intelligent workflows across disparate systems, aligning with SAP's vision for the intelligent enterprise within SAP Business Suite. Option A focuses on data storage, which is not process-specific; Option B misattributes data generation to SAP BTP; and Option D is too broad, missing the orchestration focus. This answer reflects SAP's emphasis on breaking down silos and enabling integrated processes through SAP BTP.

### 34. Frage

Which SAP Business Suite applications help organizations manage financial processes? There are 3 correct answers to this question.

- A. SAP Controlling (CO)
- B. SAP Fieldglass
- C. SAP Customer Data Cloud
- D. SAP Business Planning and Consolidation
- E. SAP Financial Accounting (FI)

Antwort: A,D,E

### 35. Frage

How can the data platform of SAP Business Data Cloud help organizations? Note: There are 3 correct answers to this question.

- A. By integrating SAP and third-party data

- B. By creating automated workflows
- C. By streamlining operations with advanced data pipelines
- D. By enabling data modeling and transformation through third-party tools
- E. By improving agility by enabling teams to respond to change quickly

**Antwort: A,C,E**

Begründung:

The SAP Business Data Cloud (BDC) is a Software-as-a-Service (SaaS) solution designed to unify and harmonize data from SAP and non-SAP sources, enabling organizations to achieve advanced analytics and AI-driven insights. The question asks how the data platform of SAP BDC helps organizations, with three correct answers. Below, each option is evaluated based on official SAP documentation, specifically from the

"Positioning SAP Business Data Cloud" and related learning materials available on SAP Learning.

\* Option A: By enabling data modeling and transformation through third-party tools While SAP BDC supports integration with third-party data and platforms (e.g., Databricks for AI/ML capabilities), the primary focus of its data modeling and transformation capabilities is within its own ecosystem, particularly through SAP Datasphere and SAP HANA Cloud. SAP BDC provides tools for data modeling and transformation, but these are not explicitly described as relying on third-party tools.

Instead, SAP emphasizes its native capabilities, such as creating consumption-ready data models in SAP Datasphere and leveraging SAP-managed data products. The documentation does not highlight third-party tools as a primary mechanism for data modeling or transformation. Therefore, this option is incorrect. Extract: "SAP Datasphere: This works as central component in BDC by creating consumption ready data models on top of Data Products while also managing analytical roles, access controls etc."

roysandip.medium.com

\* Option B: By improving agility by enabling teams to respond to change quickly SAP BDC enhances organizational agility by providing real-time access to harmonized data, enabling faster decision-making and responsiveness to business changes. The platform's unified semantic layer and pre-built Intelligent Applications allow teams to access actionable insights quickly, supporting agile decision-making and adaptability. This is explicitly supported in the documentation, which states that SAP BDC helps organizations "adapt and pivot in response to dynamic business needs" through its intelligent applications and real-time data capabilities. Extract: "New to SAP Business Data Cloud (SAP BDC) are context-aware SAP Business Data Cloud Intelligent Applications. These pre-configured dashboards provide ready-to-run insights by combining planning and analysis, all infused with trusted Artificial Intelligence (AI) to drive smarter, faster decisions. The intelligent applications enable agile decision-making, predictive analysis, and simulations, leading to better business outcomes. This not only helps organizations understand the present but also allows them to adapt and pivot in response to dynamic business needs." learning.sap.com This option is correct.

\* Option C: By creating automated workflows While SAP BDC integrates with tools like Joule, which augments decision-making through conversational AI and improves productivity, the documentation does not explicitly describe the creation of automated workflows as a primary function of the data platform itself. Automated workflows are more closely associated with SAP Business AI or specific SAP applications (e.g., SAP S/4HANA workflows) rather than the core data platform of SAP BDC.

The platform focuses on data integration, analytics, and AI-driven insights rather than workflow automation. Therefore, this option is incorrect. Extract: "Joule augments decision-making with conversational AI and improves productivity through automated workflows. With SAP BDC and Joule, customers can ensure accurate results from generative AI." (Note: This refers to Joule's capabilities, not the BDC data platform directly.) learning.sap.com

\* Option D: By integrating SAP and third-party data A core capability of SAP BDC is its ability to integrate SAP and non-SAP data into a unified semantic layer, preserving business context and enabling advanced analytics and AI. The platform harmonizes structured and unstructured data from various sources, making it a central feature for organizations looking to leverage all their data assets. This is extensively documented as a key benefit of SAP BDC. Extract: "SAP Business Data Cloud is a data platform that harmonizes all data from SAP and non-SAP sources, into a unified semantic layer of trusted data, to power advanced analytics and AI. By integrating all types of cross-company data, which includes structured and non-structured data, businesses gain actionable intelligence to bridge transactional processes and drive AI-powered growth." learning.sap.com This option is correct.

\* Option E: By streamlining operations with advanced data pipelines SAP BDC streamlines operations by providing advanced data pipelines through its integration with SAP Datasphere and SAP Databricks.

These pipelines enable efficient data ingestion, harmonization, and processing, supporting scalable and cost-effective data management. The platform's ability to create data products and leverage a data lakehouse architecture (via SAP Databricks) ensures streamlined operations for analytics and AI use cases. This is explicitly supported in the documentation, which highlights the platform's role in optimizing data management and supporting advanced pipelines. Extract: "SAP Business Data Cloud offers several capabilities for connecting and harmonizing data. By leveraging an SAP-managed Lakehouse, users can maintain rich business semantics for SAP-sourced data products right out-of-the-box. Additionally, the platform introduces a Data Foundation layer, which acts as a data lake to store both SAP and non-SAP data sources. This allows customers to organize and manage data at scale from various endpoints in a cost-efficient manner. Furthermore, it supports AI and ML operations through integration with Databricks, enhancing the potential for advanced analytics and insights." pwc.de This option is correct.

Summary of Correct Answers:

\* B: Improves agility through real-time insights and intelligent applications.

\* D: Integrates SAP and non-SAP data into a unified semantic layer.

\* E: Streamlines operations with advanced data pipelines and a data lakehouse architecture.
