Use the Adobe AD0-E724 Exam Questions for a Successful Certification

In order to gain more competitive advantages when you are going for a job interview, more and more people have been longing to get a AD0-E724 certification. They think the certification is the embodiment of their ability; they are already convinced that getting a AD0-E724 certification can help them look for a better job. There is no doubt that it is very difficult for most people to pass the AD0-E724 Exam and have the certification easily. If you are also weighted with the trouble about a AD0-E724 certification, we are willing to soothe your trouble and comfort you.

Adobe Commerce Developer Professional Sample Questions (Q142-Q147):

NEW QUESTION # 142

An Adobe Commerce developer has created a before plugin for the save() function within the Magento\Framework\App\cache\Proxy class. The purpose of this plugin is to add a prefix on all cache identifiers that fulfill certain criteria.

Why is the plugin not executing as expected?

- A. The target ClaSS implements Magento\Framework\ObjectManager\NoninterceptableInterface.
- B. Cache identifiers are immutable and cannot be changed.
- C. Another around plugin defined for the same function does not call the callable.

Answer: A

Explanation:

According to the Plugins (Interceptors) guide for Magento 2 developers, plugins are class methods that modify the behavior of public class methods by intercepting them and running code before, after, or around them. However, some classes in Magento 2 implement the NoninterceptableInterface interface, which prevents plugins from being generated for them. The Magento\Framework\App\cache\Proxy class is one of them, as it extends from Magento\Framework\ObjectManager\NoninterceptableInterface. Therefore, the plugin is not executing as expected because the target class implements NoninterceptableInterface. Verified References: https://devdocs.magento.com/guides/v2.3/extension-dev-guide/plugins.html

NEW QUESTION # 143

The di. xml file of a module attaches two plugins for the class Action.

The PluginA has the methods: beforeDispatch, aroundDispatch, afterDispatch. The PluginB has the methods: beforeDispatch, afterDispatch.

```
<config>
    <type name="Magento\Framework\App\Action\Action">
        <plugin name="vendor_module_plugina" type="Vendor\Module\Plugin\PluginA" sortOrder="10" />
        <plugin name="vendor_module_pluginb" type="Vendor\Module\Plugin\PluginB" sortOrder="20" />
    </type>
</config>
```

The around plugin code is:

```
class PluginA
{
    public function aroundDispatch(\Magento\Framework\App\Action\Action $subject, $next, $request)
    {
        // custom code
        return $request;
    }
}
```

What would be the plugin execution order?

- A.
  ```
  PluginA::beforeDispatch()
  PluginA::aroundDispatch()
  PluginA: afterDispatch()

  PluginA::beforeDispatch()
  PluginA::aroundDispatch()
  PluginB::beforeDispatch()
  ```
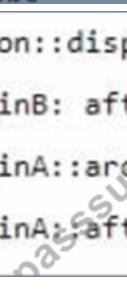

- B.

- C.

Answer: A

Explanation:
https://developer.adobe.com/commerce/php/development/components/plugins/#scenario-b-without-a-callable- around

NEW QUESTION # 144
An Adobe Commerce developer is developing a custom module. As part of their implementation they have decided that all instances of their Custom\Module\Model\Example class should receive a new instance of Magento\Filesystem\Adapter\Local.
How would the developer achieve this using di. xml?

- A.

```
<type name="Custom\Module\Model\Example">
    <arguments>
        <argument name="adapter" xsi:type="object" shared="false">Magento\Filesystem\Adapter\Local</argument>
    </arguments>
</type>
```

- B.

```
<type name="Custom\Module\Model\Example">
    <arguments>
        <argument name="adapter" xsi:type="object" transient="true">Magento\Filesystem\Adapter\Local</argument>
    </arguments>
</type>
```

- C.

```
<type name="Custom\Module\Model\Example">
    <arguments>
        <argument name="adapter" xsi:type="object" singleton="false">Magento\Filesystem\Adapter\Local</argument>
    </arguments>
</type>
```

Answer: B

NEW QUESTION # 145
How are multiple EAV attributes belonging to the same entity grouped in the database?

- A. Based on all numeric values being stored in one table while text values are stored in the other
- B. Based on the types of values they contain
- C. Based on the sizes of values they contain

Answer: B

Explanation:
Multiple EAV attributes belonging to the same entity are grouped in the database based on their data types, such as datetime,

decimal, int, text, or varchar. For example, all attributes with datetime values are stored in one table, while all attributes with text values are stored in another table.

The sizes or numeric/text values of attributes do not determine how they are grouped in the database.

Verified References: [Adobe Commerce Developer Guide - EAV data model]

Magento's EAV (Entity-Attribute-Value) model organizes attributes based on their data types to optimize storage and retrieval. Attributes are grouped into different tables based on whether they store values of types such as integer, varchar (text), decimal, datetime, etc. This organization allows Magento to efficiently manage the diverse data types associated with products, customers, and other entities, ensuring data integrity and optimizing database performance by using appropriate indexing and storage mechanisms for each data type.

NEW QUESTION # 146

How would a developer turn on outgoing emails on an Adobe Commerce Cloud Staging environment?

- A. From the command line
  magento-cloud environment:info -p <project-id> -e <environment-id> enable_smtp true
- B. Access the Project Web Interface and select the Staging environment.
  Select Configure environment.
  Toggle Outgoing emails On
- C. From the command line
  ece-tools enable_smtp true

Answer: B

Explanation:

The developer can turn on outgoing emails on an Adobe Commerce Cloud Staging environment by accessing the Project Web Interface and selecting the Staging environment. Then, the developer can select Configure environment and toggle Outgoing emails On. This will enable the SMTP service for the Staging environment and allow emails to be sent from the application. Verified References: [Magento 2.4 DevDocs] 1 In Adobe Commerce Cloud, email functionality for Staging and Production environments can be controlled through the Project Web Interface. To enable outgoing emails, you can toggle the setting from within the environment configuration.

* Using the Project Web Interface:
* Navigate to the Project Web Interface, select the Staging environment, and configure the environment settings. Here, you can enable or disable outgoing emails with a simple toggle.
* Why Option C is Correct:
* This method directly interacts with Adobe Commerce Cloud's environment settings through the GUI. Options A and B are not valid commands in Adobe Commerce Cloud for enabling SMTP or email.

NEW QUESTION # 147

......

Our company keeps pace with contemporary talent development and makes every learners fit in the needs of the society. Based on advanced technological capabilities, our AD0-E724 study materials are beneficial for the masses of customers. Our experts have plenty of experience in meeting the requirement of our customers and try to deliver satisfied AD0-E724 Exam guides to them. Our AD0-E724 exam prepare is definitely better choice to help you go through the AD0-E724 test. Buy our AD0-E724 exam questions, the success is just ahead of you.
