## 2026 High Pass-Rate 100% Free XK0-006 – 100% Free Valid Exam Duration | XK0-006 Study Reference

Infinite striving to be the best is man's duty. We have the responsibility to realize our values in the society. Of course, you must have enough ability to assume the tasks. Then our XK0-006 learning quiz can give you some help. First of all, you can easily pass the XK0-006 Exam and win out from many candidates for our XK0-006 study materials are the most effective exam materials in the market. Secondly, you can also learn a lot of the specialized knowledge at the same time.

## CompTIA Linux+ Certification Exam Sample Questions (Q65-Q70):

### NEW QUESTION # 65

While hardening a system, an administrator runs a port scan with Nmap, which returned the following output:

# nmap 104.21.75.76  
Starting Nmap 7.80 ( https://nmap.org ) at 2024-07-09 18:09 UTC  
Nmap scan report for 104.21.75.76  
Host is up (0.00087s latency).  
Not shown: 996 closed ports  
PORT STATE SERVICE  
23/tcp open telnet  
80/tcp open http  
443/tcp open https  
8080/tcp open http-proxy  
  
Nmap done: 1 IP address (1 host up) scanned in 4.93 seconds

Which of the following is the best way to address this security issue?

- A. Configuring a firewall to block traffic on port 23 on the server
- B. Changing the systems administrator's password to prevent unauthorized access
- C. **Disabling and removing the Telnet service on the server**
- D. Closing port 80 on the network switch to block traffic

**Answer: C**

Explanation:

Port 23/tcp indicates Telnet, which is insecure because it transmits data in plaintext. The best hardening approach is to disable and remove the Telnet service entirely, eliminating the vulnerability rather than just blocking it at the firewall. Secure alternatives like SSH should be used instead.

#### NEW QUESTION # 66

A Linux administrator needs to create and then connect to the app-01-imagecontainer. Which of the following commands accomplishes this task?

- A. docker exec -dc app-01-image
- B. docker build -ic app-01-image
- C. **docker run -it app-01-image**
- D. docker start -td app-01-image

**Answer: C**

Explanation:

The docker run -it command both creates a new container from the specified image and attaches to it interactively, which is exactly what the administrator needs.

#### NEW QUESTION # 67

An average of one out of three users in a company cannot reach the company website. A Linux administrator determines that one of the three website servers is down. The administrator inspects the DNS configuration for the website and notices the following entry:

WWW	IN	A	5.5.5.1
	IN	A	5.5.5.2
	IN	A	5.5.5.3

Which of the following accurately explains the issue?

- A. The DNS configuration is missing corresponding AAAA records and PTR records, and this is causing clients to fail the hostname translation.
- C. **DNS returns all three records in a different order each time, and the browser typically uses the first address in the DNS response.**
- D. One of the DNS records has not been signed with a DNSSEC-supported key, and this is causing some web browsers to

reject the DNS response.

**Answer: B**

Explanation:

With multiple A records, DNS performs simple round-robin ordering and returns the records in a different sequence on each query. Most clients try the first address returned-so when the downed server's IP appears first (about one in three times), those users cannot connect.

**NEW QUESTION # 68**

A Linux administrator needs to create and then connect to the app-01-imagecontainer. Which of the following commands accomplishes this task?

- A. docker exec -dc app-01-image
- B. docker build -ic app-01-image
- C. **docker run -it app-01-image**
- D. docker start -td app-01-image

**Answer: C**

Explanation:

The docker run -it command both creates a new container from the specified image and attaches to it interactively, which is exactly what the administrator needs.

**NEW QUESTION # 69**

An administrator attempts to install updates on a Linux system but receives error messages regarding a specific repository. Which of the following commands should the administrator use to verify that the repository is installed and enabled?

- A. yum repo-pkgs
- B. yum list installed repos
- C. yum reposync available
- D. **yum repolist all**

**Answer: D**

Explanation:

The yum repolist all command lists all configured repositories along with their status (enabled or disabled), allowing the administrator to verify if the problematic repository is installed and active.

**NEW QUESTION # 70**

.....

ExamDiscuss try hard to makes CompTIA CompTIA Linux+ Certification Exam exam preparation easy with its several quality features. Our XK0-006 exam dumps come with 100% refund assurance. We are dedicated to your accomplishment, hence pledges you victory in XK0-006 Certification exam in a single attempt. If for any reason, a user fails in XK0-006 exam then he will be refunded the money after the process. Also, we offer one year free updates to our XK0-006 Exam esteemed users; and these updates will be entitled to your account right from the date of purchase. Also the 24/7 Customer support is given to users, who can email us if they find any hazziness in the XK0-006 exam dumps, our team will merely answer to your all XK0-006 exam product related queries.
