Fortinet FCSS - Network Security 7.6 Support Engineer Sample Questions (Q92-Q97):

NEW QUESTION # 92

Which exchange takes care of DoS protection in IKEv2?

- A. IKE_Req_INIT
- B. Create_CHILD_SA
- C. IKE_Auth
- D. IKE_SA_NIT

Answer: A

Explanation:

The IKE_SA_INIT exchange in IKEv2 is responsible for DoS protection measures. During IKE_SA_INIT, before authentication and further exchange, the responder can use cookie challenges (per RFC 7296 and Fortinet VPN documentation). If a DoS attack

is suspected (many requests from the same source), the responder replies with a cookie. Only after the initiator returns the correct cookie does the exchange proceed, protecting the responder from state exhaustion and certain forms of DoS traffic at the handshake stage.

NEW QUESTION # 93

Exhibit.

The screenshot shows the FortiGate configuration page for a Remote VPN. The configuration is as follows:

Field	Value
Name	Remote
Comments	0/255
Network	
IP Version	IPv4
Remote Gateway	Static IP Address
IP Address	10.0.10.1
Interface	port1
Local Gateway	0
Mode Config	0
NAT Traversal	Enable
Keepalive Frequency	10
Dead Peer Detection	On Demand

Refer to the exhibit, which contains a screenshot of some phase 1 settings.

The VPN is not up. To diagnose the issue, the administrator enters the following CLI commands on an SSH session on FortiGate:

```
diagnose vpn ike log-filter dst-addr4 10.0.10.1
diagnose debug application ike -1
```

However, the IKE real-time debug does not show any output. Why?

- A. The administrator must also run the command **diagnose debug enable**.
- B. The debug shows only error messages. If there is no output, then the phase 1 and phase 2 configurations match.
- C. Replace **diagnose debug application ike -1** with **diagnose debug application ipsec -1**.
- D. The log-filter setting is incorrect. The VPN traffic does not match this filter.

Answer: A
