

# Real SAP C-IBP-2502 Exam Questions with Verified Answers

P.S. Free 2026 SAP C-IBP-2502 dumps are available on Google Drive shared by PracticeDump: <https://drive.google.com/open?id=1L9dPIpficbFm5g42-YKPrX6X6r5Clf>

We have professional IT workers to design the SAP real dumps and they check the update of dump pdf everyday to ensure the C-IBP-2502 dumps latest to help people pass the exam with high score. So you can trust us about the valid and accuracy of C-IBP-2502 Exam Dumps. Our braindumps cover almost questions of the actual test.

## SAP C-IBP-2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Model Sales &amp; Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Key Figures &amp; Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.</li></ul>

Topic 5	<ul style="list-style-type: none"> <li>• <b>Solution Architecture &amp; Data Integration:</b> This exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• <b>Demand Planning:</b> This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.</li> </ul>

## PracticeDump SAP C-IBP-2502 Exam Dumps Preparation Material is Available in the following easy-to-use Formats

Undoubtedly, passing the SAP C-IBP-2502 certification exam is one big achievement. Regardless of how tough the C-IBP-2502 exam is, it serves an important purpose of improving your skills and knowledge of a specific field. Once you become certified by SAP C-IBP-2502, a whole new career scope will open up to you.

## SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q43-Q48):

### NEW QUESTION # 43

Which of the following solutions should be satisfied with violations penalized by the objective function of the time-series supply optimizer? Note: There are 3 correct answers to this question.

- **A. Not fully satisfied demands**
- B. Not respecting production capacity
- **C. Violation of minimum aggregated inventory values**
- **D. Violation of minimum resource utilization**

**Answer: A,C,D**

Explanation:

The Time-Series Supply Optimizer in SAP IBP minimizes an objective function (cost-based), penalizing violations of soft constraints, while hard constraints must be fully satisfied, per SAP IBP's optimization documentation.

\* Option A: Violation of minimum resource utilization This is correct. Minimum resource utilization (e.

g., machine usage) is a soft constraint; violations incur penalties (e.g., underutilization costs), influencing the objective function.

\* Option B: Not respecting production capacity This is incorrect. Production capacity is a hard constraint in the optimizer; it cannot be violated, only respected, unlike soft constraints with penalties.

\* Option C: Not fully satisfied demands This is correct. Unsatisfied demand (non-delivery) is a soft constraint, penalized via high non-delivery costs in the objective function, a core optimizer feature.

\* Option D: Violation of minimum aggregated inventory values This is correct. Minimum inventory levels (e.g., safety stock) are soft constraints; violations are penalized (e.g., stockout costs), affecting the objective function.

Thus, A, C, and D are penalized solutions, per SAP IBP's optimizer behavior.

### NEW QUESTION # 44

What is a prerequisite for modeling outsourced manufacturers with production capacity using the Supply Optimizer?

- **A. Model relative production costs across internal locations and outsourced manufacturing locations**
- B. Model target inventory and stocks at the outsourced manufacturing location
- C. Use production lead times and offsets to manage components at the outsourced manufacturing location
- D. Ensure that the outsourced manufacturing locations have a separate subnetwork

**Answer: A**

Explanation:

The Supply Optimizer in SAP IBP models outsourced manufacturers as Locations with production capacity, optimizing costs across the network, per SAP IBP's supply planning documentation.

\* Option A: Model relative production costs across internal locations and outsourced manufacturing locations This is correct. The optimizer requires cost data (e.g., production costs per unit) for internal and outsourced locations to decide where to produce, a key prerequisite, per SAP IBP's cost optimization rules.

\* Option B: Use production lead times and offsets to manage components at the outsourced manufacturing location This is incorrect. Lead times and offsets are used, but they're not a prerequisite specific to capacity modeling; they're general planning inputs.

\* Option C: Ensure that the outsourced manufacturing locations have a separate subnetwork This is incorrect. Subnetworks optimize runtime, but they're not required for modeling outsourced capacity; the optimizer works across one network.

\* Option D: Model target inventory and stocks at the outsourced manufacturing location This is incorrect. Inventory targets are optional and not a prerequisite for capacity modeling in the optimizer.

Thus, A is the prerequisite, per SAP IBP's official optimizer requirements.

#### NEW QUESTION # 45

Which of the following data can be tracked using a change-history-enabled key figure? Note: There are 3 correct answers to this question.

- A. Reason code
- B. Key figure type
- C. Attributes
- D. Modified code
- E. Scenario ID

**Answer: A,C,D**

Explanation:

Change-history-enabled key figures in SAP IBP track modifications to values, logging details for auditability, configured in the Planning Areas app. The tracked data is defined by SAP IBP's change history functionality, per official documentation.

\* Option A: Scenario ID This is incorrect. Scenario ID identifies the planning scenario, but it's not tracked in key figure change history; it's a context, not a change detail.

\* Option B: Modified code This is correct. "Modified code" (likely intended as "modification code" or user ID) tracks who made the change, a standard field in SAP IBP's change log.

\* Option C: Attributes This is correct. Changed attribute values (e.g., Product ID, Location ID) tied to the key figure's planning level are tracked, per SAP IBP's documentation.

\* Option D: Key figure type This is incorrect. Key figure type (e.g., stored, calculated) is a configuration setting, not a dynamic value tracked in change history.

\* Option E: Reason code This is correct. Reason codes (e.g., manual adjustment justification) can be logged with changes, a feature in SAP IBP's Excel UI and change history, per official guides.

Thus, B, C, and E are tracked data elements, per SAP IBP's change history capabilities.

#### NEW QUESTION # 46

You want to display and edit data in different Units of Measure (UOM). Which of the following must you consider before you use the UOM? Note: There are 3 correct answers to this question.

- A. Conversion to the target unit of measure is handled by the SAP IBP Excel add-in
- B. Units of measure are usually not time-dependent
- C. Analytics allow the user to select the target unit of measure
- D. Units of measure are an attribute of a master data type, such as Product
- E. Units of measure are usually not time-independent

**Answer: B,C,D**

Explanation:

Units of Measure (UOM) in SAP IBP allow data to be displayed and edited in different units (e.g., kg, lbs), configured via master data and UI settings, per SAP IBP's documentation.

\* Option A: Analytics allow the user to select the target unit of measure This is correct. Analytics apps (e.g., Advanced Dashboards) and Excel planning views let users choose the target UOM for display, leveraging conversion factors, per SAP IBP's visualization capabilities.

\* Option B: Units of measure are usually not time-independent This is incorrect. UOMs are typically static (time-independent) unless explicitly modeled as time-dependent (rare), making this a misstatement.

\* Option C: Units of measure are an attribute of a master data type, such as Product This is correct. UOM (e.g., Base UOM) is an attribute of the Product master data type, with conversion factors defined in UOM Conversion master data, per SAP IBP's setup.

\* Option D: Units of measure are usually not time-dependent This is correct. UOMs are generally static attributes, not varying by time unless custom-configured, aligning with SAP IBP's standard behavior.

\* Option E: Conversion to the target unit of measure is handled by the SAP IBP Excel add-in This is incorrect. While the Excel add-in displays converted values, the conversion logic is defined in the planning area (via UOM Conversion factors), not handled solely by the add-in.

Thus, A, C, and D are key considerations, per SAP IBP's official UOM handling.

#### NEW QUESTION # 47

What are some of the prerequisites for configuring a planning area that results in a successful consistency check? Note: There are 2 correct answers to this question.

- A. Configure at least one calculated key figure for the planning area
- B. Configure at most two input key figures on the same planning level in a key figure calculation
- C. Specify a planning horizon in the planning area for each level of the assigned time profile
- D. Assign the compound master data type and its component master data types

**Answer: C,D**

Explanation:

A successful consistency check in SAP IBP ensures the planning area's configuration is valid, per SAP IBP's documentation.

\* Option A: Configure at least one calculated key figure for the planning area This is incorrect.

Calculated key figures are optional; a planning area can function with only stored key figures.

\* Option B: Specify a planning horizon in the planning area for each level of the assigned time profile This is correct. The planning horizon (e.g., past/future periods) must align with the time profile levels (e.g., week, month) for data consistency, a prerequisite, per SAP IBP's setup.

\* Option C: Configure at most two input key figures on the same planning level in a key figure calculation This is incorrect. There's no such limit; calculations can use multiple inputs, depending on complexity.

\* Option D: Assign the compound master data type and its component master data types This is correct. Compound types (e.g., SOURCECUSTOMER) and their components (e.g., Customer, Location) must be assigned for network consistency, per SAP IBP's documentation.

Thus, B and D are prerequisites, per SAP IBP's official consistency check requirements.

#### NEW QUESTION # 48

.....

PracticeDump's exam dumps guarantee your success with a promise of returning back the amount you paid. Such an in itself is the best proof of the unique quality of our product and its ultimate utility for you. Try C-IBP-2502 Dumps and ace your upcoming C-IBP-2502 certification test, securing the best percentage of your academic career. If you didn't pass C-IBP-2502 exam, we guarantee you will get full refund.
