These real and updated Salesforce Public-Sector-Solutions dumps are essential to pass the Public-Sector-Solutions exam on the

first try. Don't waste further time and money, get real Salesforce Public-Sector-Solutions pdf questions and practice test software, and start Public-Sector-Solutions Test Preparation today. PracticeDump will also provide you with up to 365 days of free exam questions updates.

Salesforce Public Sector Solutions Accredited Professional (AP-222) Exam Sample Questions (Q93-Q98):

NEW QUESTION # 93

A Technical Consultant has been asked to give insight to the reviewers explaining how a particular grant seeker was prioritized now that the Prioritization Expression Sets and Matrix have been developed.

Which three tasks must the Technical Consultant do to accommodate this request?

- A. Integrate the BRE with Decision Explainer.
- B. Create a Screen flow and incorporate the Decision Explainer component to display the outcome.
- C. Assign the Decision Explainer Permission Set License to the appropriate user(s).
- D. Add the Decision Explainer Log History component to the Lightning record page(s).
- E. Create an Apex Trigger to document the decision steps performed.

Answer: B,C,D

Explanation:

A Screen flow, a Decision Explainer Log History component, and a Decision Explainer Permission Set License are three tasks that must be done to accommodate the request of explaining how a particular grant seeker was prioritized. A Screen flow is a type of flow that can create an interactive user interface to display information or collect data from users. A Screen flow can incorporate the Decision Explainer component, which is a custom Lightning component that can display the outcome and explanation of a decision made by a Decision Matrix or a Business Rules Engine (BRE). A Decision Explainer Log History component is a standard Lightning component that can display a list of Decision Explanations that have been generated for a record by a Decision Matrix or a BRE. A Decision Explainer Permission Set License is a type of license that can grant users access to the Decision Explainer features, such as viewing and creating Decision Explanations.

NEW QUESTION # 94

A government agency wants to digitize hundreds of PDF forms for its employees. Which Employee Experience for Public Sector feature(s) are most important to address this opportunity?

- A. Salesforce OmniStudio, Flows, Employee and Public Sector Data Models, and Employee Community
- B. Salesforce Flows, Employee and Public Sector Data Models, and Employee Community
- C. Salesforce Flows, APEX, Custom Objects, and VisualForce
- D. Salesforce Flows, Customer Community, and Individual Account

Answer: A

Explanation:

Salesforce OmniStudio, Flows, Employee and Public Sector Data Models, and Employee Community. This is the packaged route that keeps the process supportable, auditable, and aligned to the data model.

The Core Concept Explained: OmniStudio separates guided interaction, data mapping, orchestration, and UI presentation. That separation is critical for high-volume public-sector intake because each asset can be tested and reused independently.

Step-by-Step Technical Analysis: Design the user journey first, then decide which OmniStudio asset owns each responsibility.

OmniScript captures guided input, DataRaptors map Salesforce data, Integration Procedures orchestrate server-side work, and FlexCards expose summarized context. After assembly, validate data payloads, error handling, security, and performance with realistic application records. Use OmniStudio, Flow, Employee and Public Sector data models, and an Employee Community experience.

Why the Incorrect Options Are Wrong: B adds a custom build path and increases lifecycle, security, and upgrade effort when a packaged or declarative capability already supports the requirement. C may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer. D adds a custom build path and increases lifecycle, security, and upgrade effort when a packaged or declarative capability already supports the requirement.

NEW QUESTION # 95

A government agency would like to ensure that fee calculations for its licensing programs are done automatically and correctly; the System Administrator needs to ensure that the data type must be currency.

Where in the Expression Sets can the Administrator set the data type as Currency?

- **A. Under Add Resource in Expression Sets**
- B. Entry Criteria for Process builder
- C. Under Omniscritps and while setting options
- D. Under the Decision Table

Answer: A

Explanation:

Under Add Resource in Expression Sets. This selection keeps the implementation declarative and within the intended Public Sector operating model.

The Core Concept Explained: Business Rules Engine externalizes decision logic from custom code.

Expression Sets orchestrate calculations and can call decision assets so policy thresholds remain maintainable by authorized business users.

Step-by-Step Technical Analysis: Identify the inputs that drive the decision, declare them as Expression Set resources, and use Decision Matrices or Decision Tables where business users must maintain rule thresholds.

Execute representative samples before activation, then confirm the output and Decision Explorer history match the expected eligibility, fee, or prioritization result. Define the data type under Add Resource in the Expression Set.

Why the Incorrect Options Are Wrong: A may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer. B relies on older automation patterns that do not provide the same rule authoring, explanation, or industry metadata support required here. C may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer.

NEW QUESTION # 96

A public sector agency plans to use Public Sector Solutions for grants management. There are no in-house developers in the agency, and they are worried that some of the installation steps may potentially require development skills and the use of developer tools such as VS Code & SalesforceDX.

Which steps for Public Sector Solutions setup and installation require the use of such developer tools?

- **A. Deploy the DataPack Lightning Web Component Files to the Org**
- B. Activate DataPack OmniScripts and Integration Procedures
- C. Installation of OmniStudio Package in the org
- D. Download Public Sector Sample DataPacks from Process Library

Answer: A

Explanation:

Deploying the DataPack Lightning Web Component Files to the Org is a step for Public Sector Solutions setup and installation that requires the use of developer tools such as VS Code & SalesforceDX. DataPack Lightning Web Component Files are files that contain code for displaying DataPacks on Lightning Pages or Experience Sites. To deploy these files to the org, the agency needs to use a developer tool that supports metadata deployment, such as VS Code & SalesforceDX. Reference:

NEW QUESTION # 97

Foodvania has adopted Salesforce Public Sector Solutions to get relief to small businesses experiencing hardship due to the pandemic. Foodvania would like the recipients to apply for relief in a self-service portal, allowing for the upload of supporting documentation and the capability to check the status of their application.

What should the consultant recommend using?

- A. The consultant should recommend the Grants Management product with the Outbound Funds Module to give the recipients the capability to review their applications status.
- **B. The consultant should recommend the Grants Management product which Includes the Grants Portal feature**
- C. The consultant should recommend the Outbound Funds Module Which Includes the Grants Portal feature
- D. The consultant should recommend the Outbound Funds Module Which Includes the Grants Portal feature and the procurement for an allotment to Experience Cloud licenses so as the recipients may review their applications status

Answer: B

Explanation:

Explanation

The consultant should recommend the Grants Management product which includes the Grants Portal feature to allow the recipients to apply for relief in a self-service portal, allowing for the upload of supporting documentation and the capability to check the status of their application. Grants Management is a prebuilt app that comes with Public Sector Solutions. It can help public sector agencies to manage the entire grant lifecycle, from application to award to reporting. Grants Portal is a component of Grants Management that can help public sector agencies to create a digital experience site for grant applicants or recipients. Grants Portal can allow the recipients to apply for relief in a self-service portal, upload supporting documentation, and check the status of their application.
