It is known that our DevOps-SRE valid study guide materials have dominated the leading position in the global market with the decades of painstaking efforts of our experts and professors. There are many special functions about DevOps-SRE study materials to help a lot of people to reduce the heavy burdens when they are preparing for the DevOps-SRE Exams for the DevOps-SRE study practice question from our company can help all customers to make full use of their sporadic time. Must buy our DevOps-SRE exam questions, you will be able to pass the DevOps-SRE exam easily.

The PeopleCert DevOps-SRE Certification Exam is designed to validate the skills and knowledge of IT professionals in the field of Site Reliability Engineering (SRE). SRE is an engineering approach to operations that originated at Google and is now widely adopted by many organizations. It focuses on the reliability and resilience of systems and services, combining software engineering and operations principles to deliver high-quality services to customers.

The PeopleCert DevOps-SRE Certification Exam is designed to test the knowledge and skills of IT professionals who are interested in becoming a DevOps Site Reliability Engineer. PeopleCert DevOps Site Reliability Engineer (SRE) certification is for individuals who have experience in DevOps and want to specialize in SRE. DevOps-SRE exam covers a wide range of topics, including infrastructure automation, monitoring, incident management, and service reliability engineering.

100% Pass 2026 Peoplecert Authoritative DevOps-SRE: PeopleCert DevOps Site Reliability Engineer (SRE) Training Tools

We apply international recognition third party for payment for DevOps-SRE exam materials, therefore, if you choose us, your money safety will be guaranteed. The third party will guarantee your interests. Besides, DevOps-SRE exam materials of us is high-quality, they will help you pass the exam successfully. We also pass guarantee and money back guarantee if you fail to pass the exam. DevOps-SRE Exam Braindumps offer you free update for one year, and in the following year, you can know the latest information for the exam. The latest version for DevOps-SRE will be sent to your email automatically.

Peoplecert DevOps-SRE Certification is highly respected in the industry and is recognized by many leading organizations around the world. It is a valuable credential for professionals who want to advance their careers in the field of SRE and demonstrate their expertise in this area. PeopleCert DevOps Site Reliability Engineer (SRE) certification is also a valuable tool for organizations that want to ensure that their SRE teams have the skills and knowledge needed to ensure the reliability, scalability, and performance of their software systems in production environments.

Peoplecert PeopleCert DevOps Site Reliability Engineer (SRE) Sample

Questions (Q71-Q76):

NEW QUESTION # 71

Identify the defense depth (DiD) layer where data flows in from, and out to, other networks, including the Internet

- A. Physical layer
- B. Host layer
- C. Data layer
- D. Perimeter layer

Answer: A

NEW QUESTION # 72

What types of outages must fit into an Error Budget?

- A. Any planned or unplanned outage
- B. Unplanned incidents
- C. Any change approved by the CAB or decision authority
- D. Defect fixes

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

An error budget accounts for all downtime, including both planned and unplanned outages. This is a critical SRE principle: the user does not distinguish between maintenance downtime and accidental downtime - therefore, neither should the SLO nor the error budget.

The SRE Book, Chapter "Service Level Objectives," states:

"From the user's perspective, availability is simply whether the service is working or not, regardless of whether the outage was planned or unplanned." This means all downtime counts toward the error budget.

Additionally, the SRE Workbook reinforces this point:

"Error budgets must include every form of unavailability - maintenance events, configuration changes, emergency work, and unexpected incidents." This confirms that planned outages (maintenance windows) and unplanned outages (incidents) both consume error budget.

Why the other options are incorrect:

- * A Only includes unplanned incidents; SRE requires counting planned outages as well.
- * B Defect fixes may contribute to downtime, but "defect fixes" alone are not a downtime category.
- * D CAB approval has no bearing on whether outages count toward error budgets.

Thus, C is correct: any planned or unplanned outage must be included.

NEW QUESTION # 73

Engineering operational work to scale with a growing application is BEST achieved by addressing which of the following issues?

- A. Staffing levels
- B. On-call rotations
- C. TOI
- D. interruptions

Answer: C

NEW QUESTION # 74

Which of the following communication and collaboration practices BEST contribute to the effectiveness of the SRE team?

- A. Project managers share limited data only upon request.

- B. Team members should manage their own data discretely.
- C. Data in SRE should be managed separately from others.
- D. Data is flowing freely within and around the SRE team

Answer: D

NEW QUESTION # 75

In a safety culture, engineers are allowed to do more with the production environment without fear of repercussions. What else do engineers need to do?

- A. Avoid being on-call
- B. Share production incidents on social media
- C. Be accountable for their actions
- D. Skip all blameless post-mortems

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In a safety culture, SRE emphasizes psychological safety so engineers can work effectively in production without fear of blame. However, safety never removes accountability. Engineers must take responsibility for their actions, decisions, and assumptions, particularly during incidents.

The Site Reliability Engineering Book, Chapter "Postmortem Culture," states:

"Blamelessness does not eliminate accountability. Individuals must still explain the context, assumptions, and reasoning behind their decisions so that the organization can learn." Google stresses that:

- * Engineers must feel safe to act and report issues
- * Engineers must remain responsible and accountable
- * Accountability enables learning, not punishment

Why other options are incorrect:

- * A Sharing incidents on social media violates confidentiality
- * C Blameless postmortems are required, not skipped
- * D Avoiding on-call is contrary to SRE responsibilities

Thus, B is correct.
