Our Network-and-Security-Foundation training guide always promise the best to service the clients. Carefully testing and producing to match the certified quality standards of Network-and-Security-Foundation exam materials, we have made specific statistic researches on the Network-and-Security-Foundation practice materials. And the operation system of our Network-and-Security-Foundation practice materials can adapt to different consumer groups. Facts speak louder than words. Through years' efforts, our Network-and-Security-Foundation exam preparation has received mass favorable reviews because the 99% pass rate is the powerful proof of trust of the public.

Network-and-Security-Foundation practice exam takers can even access the results of previous attempts which helps them in knowing and overcoming their mistakes before appearing in the Network-and-Security-Foundation final test. There are thousands of students that bought BootcampPDF's Network-and-Security-Foundation Practice Exam and got success on their initial tries. We guarantee that if you take our provided WGU Network-and-Security-Foundation exam dumps you will crack the Network-and-Security-Foundation Exam in a single try.

Marvelous Certification Network-and-Security-Foundation Test Questions -

Easy and Guaranteed Network-and-Security-Foundation Exam Success

Our Network-and-Security-Foundation learning materials provide multiple functions and considerate services to help the learners have no inconveniences to use our product. We guarantee to the clients if only they buy our Network-and-Security-Foundation study materials and learn patiently for some time they will be sure to pass the Network-and-Security-Foundation test with few failure odds. The price of our product is among the range which you can afford and after you use our study materials you will certainly feel that the value of the product far exceed the amount of the money you pay. Choosing our Network-and-Security-Foundation Study Guide equals choosing the success and the perfect service.

WGU Network-and-Security-Foundation Sample Questions (Q58-Q63):

NEW QUESTION # 58

Access to a company's information system requires a user to be within a valid geographic location and to enter a valid username and password.

Which concept does this scenario demonstrate?

- A. Single sign-on
- B. User-based accounting
- C. Certificate verification
- D. Multifactor authentication

Answer: D

Explanation:

Multifactor authentication (MFA) requires users to verify their identity using multiple factors, such as something they know (password), something they have (a token or phone), or somewhere they are (geolocation-based access control). Requiring both location verification and password authentication demonstrates MFA.

* Certificate verification checks digital certificates for security but does not use multiple authentication factors.

* User-based accounting logs user activities but does not verify identity.

* Single sign-on (SSO) allows access to multiple systems with one login but is not necessarily MFA.

NEW QUESTION # 59

An attacker uses malicious software to disable network resources, demanding a ransom to restore access.

Which category describes the purpose of the attack?

- A. Denial of availability
- B. Data export
- C. Data modification
- D. Launch point

Answer: A

Explanation:

This describes a ransomware attack, which falls under denial of availability because it prevents users from accessing their data or systems until a ransom is paid. Attackers use encryption to lock files, disrupting operations.

* Data modification refers to unauthorized changes to information.

* Data export involves stealing data rather than disabling access.

* Launch point describes an attacker's use of a compromised system to attack others.

NEW QUESTION # 60

A host is already set up with an operating system. An administrator wants to install a hypervisor atop the operating system to allow for setting up virtual machines.

Which hypervisor should be used?

- A. Type 1
- B. Proprietary
- C. Type 2
- D. Open source

Answer: C

NEW QUESTION # 61

A computer network has software that tracks successful and unsuccessful connection attempts to the network in order to better identify attacks.

Which network security concept does this scenario address?

- A. Authorization
- B. Authentication
- C. Availability
- **D. Accounting**

Answer: D

Explanation:

Accounting (also known as auditing or logging) is a network security concept that tracks user activities, including successful and failed authentication attempts, system changes, and resource access. This helps in detecting and mitigating security breaches.

- * Authentication verifies user identity but does not track activity.
- * Availability ensures systems remain operational.
- * Authorization controls user permissions but does not log activities.

NEW QUESTION # 62

Which layer of the TCP/IP model includes the Internet Protocol (IP)?

- **A. Network or internet**
- B. Transport
- C. Physical or network access
- D. Application

Answer: A

Explanation:

The Network or Internet layer of the TCP/IP model is responsible for addressing, routing, and delivering packets across networks. The Internet Protocol (IP) operates at this layer, ensuring that data is correctly routed from the source to the destination.

- * Physical or network access layer deals with hardware transmission (e.g., Ethernet, Wi-Fi).
- * Application layer includes end-user services (e.g., HTTP, FTP).
- * Transport layer manages data flow using protocols like TCP and UDP but does not handle IP addressing.

NEW QUESTION # 63

.....

Our Network-and-Security-Foundation test material can help you focus and learn effectively. You don't have to worry about not having a dedicated time to learn every day. You can learn our Network-and-Security-Foundation exam torrent in a piecemeal time, and you don't have to worry about the tedious and cumbersome learning content. We will simplify the complex concepts by adding diagrams and examples during your study. By choosing our Network-and-Security-Foundation test material, you will be able to use time more effectively than others and have the content of important information in the shortest time. And you can pass the Network-and-Security-Foundation exam easily and successfully.
