

最受推薦的FCSS_EFW_AD-7.6考古題更新，免費下載FCSS_EFW_AD-7.6考試指南得到妳想要的Fortinet證書

此外，這些TestpdfFCSS_EFW_AD-7.6考試題庫的部分內容現在是免費的：<https://drive.google.com/open?id=1LGwmRfA3ByEHZerytm0S-JF2WGEQewqd>

你想在IT行業中大顯身手嗎，你想得到更專業的認可嗎？快來報名參加FCSS_EFW_AD-7.6資格認證考試進一步提高自己的技能吧。Testpdf可以幫助你實現這一願望。這裏有專業的知識，強大的考古題，優質的服務，可以讓你高速高效的掌握知識技能，在考試中輕鬆過關，讓自己更加接近成功之路。

Fortinet FCSS_EFW_AD-7.6 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">• System Configuration: This section of the exam measures the skills of a Network Security Architect and covers the implementation and integration of core Fortinet infrastructure components. It includes deploying the Security Fabric, enabling hardware acceleration, configuring high availability operational modes, and designing enterprise networks utilizing VLANs and VDOM technologies to meet specific organizational requirements.
主題 2	<ul style="list-style-type: none">• VPN: This section of the exam measures the skills of a VPN Solutions Engineer and covers the implementation of various virtual private network technologies. It includes configuring IPsec VPN using IKE version 2 protocols and implementing Automatic Discovery VPN solutions to establish on-demand secure tunnels between multiple sites within an enterprise network infrastructure.
主題 3	<ul style="list-style-type: none">• Central Management: This section of the exam measures the skills of a Security Operations Manager and covers the implementation of centralized management systems for coordinated control and oversight of distributed Fortinet security infrastructures across enterprise environments.

主題 4	<ul style="list-style-type: none"> • Security Profiles: This section of the exam measures the skills of a Threat Prevention Specialist and covers the configuration and management of comprehensive security profiling systems. It includes implementing SSL • SSH inspection, combining web filtering and application control mechanisms, integrating intrusion prevention systems, and utilizing the Internet Service Database to create layered security protections for organizational networks.
主題 5	<ul style="list-style-type: none"> • Routing: This section of the exam measures the skills of a Network Infrastructure Engineer and covers the implementation of dynamic routing protocols for enterprise network traffic management. It includes configuring both OSPF and BGP routing protocols to ensure efficient and reliable data transmission across complex organizational networks.

最新Fortinet FCSS_EFW_AD-7.6考題 & FCSS_EFW_AD-7.6題庫資料

Fortinet FCSS_EFW_AD-7.6認證證書可以加強你的就業前景，可以開發很多好的就業機會。Testpdf是一個很適合參加Fortinet FCSS_EFW_AD-7.6認證考試考生的網站，不僅能為考生提供Fortinet FCSS_EFW_AD-7.6認證考試相關的所有資訊，而且還為你提供一次不錯的學習機會。Testpdf能夠幫你簡單地通過Fortinet FCSS_EFW_AD-7.6認證考試。

最新的 Fortinet Certified Professional Network Security FCSS_EFW_AD-7.6 免費考試真題 (Q20-Q25):

問題 #20

An administrator needs to install an IPS profile without triggering false positives that can impact applications and cause problems with the user's normal traffic flow.

Which action can the administrator take to prevent false positives on IPS analysis?

- A. Enable Scan Outgoing Connections to avoid clicking suspicious links or attachments that can deliver botnet malware and create false positives.
- B. Use the IPS profile extension to select an operating system, protocol, and application for all the network internal services and users to prevent false positives.
- C. Use an IPS profile with action monitor, however, the administrator must be aware that this can compromise network integrity.
- D. Install missing or expired SSUTLS certificates on the client PC to prevent expected false positives.

答案： B

解題說明：

False positives in Intrusion Prevention System (IPS) analysis can disrupt legitimate traffic and negatively impact user experience. To reduce false positives while maintaining security, administrators can:

Use IPS profile extensions to fine-tune the settings based on the organization's environment.

Select the correct operating system, protocol, and application types to ensure that IPS signatures match the network's actual traffic patterns, reducing false positives.

Customize signature selection based on the network's specific services, filtering out unnecessary or irrelevant signatures.

問題 #21

Refer to the exhibit.

A normalized interface LAN on FortiManager is shown.

Which two statements about this interface configuration are correct? (Choose two.)

- A. The normalized interface LAN will be mapped to the wireless interface for FortiGate-81E model devices.
- B. The normalized interface LAN will be mapped to the port2 interface for NGFW-1 [Core2].
- C. The normalized interface LAN will be mapped to the Human Resources interface for any FortiGate-40F model devices.

- D. The normalized interface LAN will be mapped to the private interface for FortiGate-VM64 model devices.

答案： A,B

解題說明：

The normalized interface named LAN is mapped per platform so that, for any FortiGate-81E device, it corresponds to the interface named Wireless. In addition, a specific per-device mapping is defined so that, on device NGFW-1 [Core2], the normalized LAN interface maps to the physical interface port2.

問題 #22

What does the command set forward-domain <domain_ID> in a transparent VDOM interface do?

- A. It configures the interface to prioritize traffic based on the domain ID, enhancing quality of service for specified VLANs.
- B. It assigns a unique domain ID to the interface, allowing it to operate across multiple VLANs within the same VDOM.
- C. It isolates traffic within a specific VLAN by assigning a broadcast domain to an interface based on the VLAN ID.
- D. It restricts the interface to managing traffic only from the specified VLAN, effectively segregating network traffic.

答案： C

問題 #23

Refer to the exhibit, which shows an OSPF network.

Which types of link-state advertisements (LSA) will NGFW-1 send, if it is a backup designated router (BDR)?

- A. NGFW-1 will send type 1 and type 4 LSAs.
- B. NGFW-1 will send type 1 and type 2 LSAs.
- C. NGFW-1 will send type 1 and type 3 LSAs.
- D. NGFW-1 will send type 1 and type 5 LSAs.

答案： C

問題 #24

How will configuring set tcp-mss-sender and set tcp-mss-receiver in a firewall policy affect the size and handling of TCP packets in the network?

- A. The maximum segment size permitted in the firewall policy determines whether TCP packets are allowed or denied.
- B. The administrator must consider the payload size of the packet and the size of the IP header to configure a correct value in the firewall policy.
- C. The TCP packet modifies the packet size only if the size of the packet is less than the one the administrator configured in the firewall policy.
- D. Applying commands in a firewall policy determines the largest payload a device can handle in a single TCP segment.

答案： D

解題說明：

The set tcp-mss-sender and set tcp-mss-receiver commands in a firewall policy allow an administrator to adjust the Maximum Segment Size (MSS) of TCP packets.

This setting controls the largest payload size that a device can handle in a single TCP segment, ensuring that packets do not exceed the allowed MTU (Maximum Transmission Unit) along the network path.

set tcp-mss-sender adjusts the MSS value for outgoing TCP traffic. set tcp-mss-receiver adjusts the MSS value for incoming TCP traffic.

This helps prevent issues with fragmentation and MTU mismatches, improving network performance and avoiding retransmissions.

問題 #25
