

Nutanix NCP-DB-6.10 Valid Test Testking & NCP-DB-6.10 Valid Dumps Files

What's more, part of that ActualVCE NCP-DB-6.10 dumps now are free: <https://drive.google.com/open?id=1rx0ImeEOnRKM2qM2ehfeRGhB2nNlICB>

You can download a free demo of Nutanix exam study material at ActualVCE. The free demo of NCP-DB-6.10 exam product will eliminate doubts about our NCP-DB-6.10 PDF and practice exams. You should avail this opportunity of Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 NCP-DB-6.10 exam dumps free demo. It will help you pay money without any doubt in mind. We ensure that our NCP-DB-6.10 Exam Questions will meet your NCP-DB-6.10 test preparation needs. If you remain unsuccessful in the NCP-DB-6.10 test after using our NCP-DB-6.10 product, you can ask for a full refund. ActualVCE will refund you as per the terms and conditions.

We can proudly claim that you can successfully pass the exam just on the condition that you study with our NCP-DB-6.10 preparation materials for 20 to 30 hours. And not only you will get the most rewards but also you will get an amazing study experience by our NCP-DB-6.10 Exam Questions. For we have three different versions of our NCP-DB-6.10 study guide, and you will have different feelings if you have a try on them.

Nutanix NCP-DB-6.10 Updated and Different Formats Study Material

Before you buy our product, you can download and try out it freely so you can have a good understanding of our NCP-DB-6.10 test prep. In such a way, the client can visit the page of our NCP-DB-6.10 exam questions on the website. So the client can understand our NCP-DB-6.10 Exam Materials well and decide whether to buy our NCP-DB-6.10 training guide or not since that they have checked the quality of our NCP-DB-6.10 exam questions. We provide the best NCP-DB-6.10 learning guide to our client and you will be satisfied.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q39-Q44):

NEW QUESTION # 39

During maintenance, a team wants to power off the repository VM. The VM is not the primary or synchronized copy node. What is the expected outcome?

- A. Manual interaction will be required to restore service.
- **B. There will be no service interruption.**
- C. NDB services will fail over immediately.
- D. The HAProxy VMs will failover instead.

Answer: B

Explanation:

In an NDB environment, the repository VM stores metadata and configuration data but is not a critical runtime component for service availability. If the team powers off the repository VM during maintenance, and it is neither the primary nor a synchronized copy node, the NDB service will continue to operate without interruption. NDB's high availability (HA) architecture, managed by HAProxy and other components, ensures redundancy and failover capabilities, allowing the system to rely on the primary and synchronized nodes. The repository VM's downtime only affects metadata access, which can be restored post-maintenance without impacting ongoing database operations.

NEW QUESTION # 40

A clone needs to be created on an existing database server, but there are no Authorized database servers defined to support the cloned database.

In which two ways can Database Server VMs be authorized during a Clone Create operation?

(Choose two.)

- A. Within Time Machine, use the Actions menu and Authorize Database Server VMs to identify which database server VMs to authorize for clones.
- B. During the Clone creation process, click the plus icon to authorize one or more database server VMs.
- C. During the database server provisioning process, flag the database server to be authorized for supporting cloned databases.
- D. Within the Database Server VM Summary window, update the database server to be authorized for supporting cloned databases.

Answer: A,B

Explanation:

When creating a clone on an existing database server but no Authorized database servers are defined to support the cloned database, the administrator must authorize the necessary Database Server VMs. Two valid methods exist within NDB: (1) Using the Time Machine interface, the administrator can navigate to the Actions menu and select "Authorize Database Server VMs" to designate specific VMs for clone support, providing a proactive authorization step. (2) During the Clone creation process, the wizard includes an option (e.g., a plus icon) to authorize one or more database server VMs on the fly, streamlining the process if authorization is needed mid-operation.

NEW QUESTION # 41

An administrator needs to migrate a large I/O-intensive database that doesn't support multi-disk layout.

How should the storage be provisioned with Era to support the database while optimizing performance?

- A. Volume Group with Load Balancing
- B. Volume Group
- C. vDisk based provisioning
- D. Storage Spaces

Answer: B

Explanation:

In Nutanix Era, a Volume Group is the recommended storage provisioning method for a large I/O-intensive database that doesn't support a multi-disk layout. A Volume Group in Nutanix Era is a collection of disks that can be managed as a single entity, providing a way to aggregate the storage capacity of multiple disks into a larger storage unit. This allows for better performance optimization as it enables the database to leverage the combined I/O capabilities of all the disks in the group. It's important to note that while other options like Load Balancing, Storage Spaces, and vDisk based provisioning can also be used in certain scenarios, a Volume Group is specifically designed for situations where a single, high-performance storage unit is required.

NEW QUESTION # 42

An administrator needs to restore databases provisioned with a shared disk configuration on Windows Storage Spaces. What happens when NDB runs the restore operation?

- A. NDB performs Tail Log backup to backup any remaining logs.

- B. NDB copies the DB files to be restored to the source volume.
- **C. NDB restores the disk that are associated with the database.**
- D. NDB replaces the source volume with the snapshot volume.

Answer: C

Explanation:

When an administrator needs to restore databases provisioned with a shared disk configuration on Windows Storage Spaces in Nutanix Database Service (NDB), the restore operation focuses on the disks associated with the database. Windows Storage Spaces provides a virtualized storage layer, and NDB manages the restoration by reverting or recovering the specific disks that host the database files and logs. This ensures that the database is restored to its previous state using the snapshot or backup data, while preserving the shared disk configuration integrity. NDB does not replace the source volume or perform additional operations like tail log backups unless explicitly configured.

NEW QUESTION # 43

What two Reference: resources are available for Nutanix Era APIs? (Choose two.)

- **A. Era API Explorer**
- B. Nutanix Support Portal
- **C. Nutanix.dev API Reference:**
- D. Era GitHub API Repository

Answer: A,C

Explanation:

In addition to the API Reference:, the NutanixDev code samples repo provides working code that implements the practices shown in the documentation. The Era API Explorer is another resource that provides a comprehensive view of the available APIs, allowing users to interactively explore and test the APIs. However, there is no mention of a specific "Era GitHub API Repository" or the "Nutanix Support Portal" being used as a Reference: resource for Nutanix Era APIs in the provided resources.

NEW QUESTION # 44

.....

With NCP-DB-6.10 study tool, you no longer need to look at a drowsy textbook. You do not need to study day and night. With NCP-DB-6.10 learning dumps, you only need to spend 20-30 hours on studying, and then you can easily pass the exam. At the same time, the language in NCP-DB-6.10 test question is very simple and easy to understand. Even if you are a newcomer who has just entered the industry, you can learn all the knowledge points without any obstacles. We believe that NCP-DB-6.10 Study Tool will make you fall in love with learning. Come and buy it now.

NCP-DB-6.10 Valid Dumps Files: <https://www.actualvce.com/Nutanix/NCP-DB-6.10-valid-vce-dumps.html>

Nutanix NCP-DB-6.10 Valid Test Testking As the quick development of the world economy and intense competition in the international, the world labor market presents many new trends: company's demand for the excellent people is growing, Nutanix NCP-DB-6.10 Valid Test Testking To sort out the most useful and brand new contents, they have been keeping close eye on trend of the time, If you want to pass the exam in a short time, choose our NCP-DB-6.10 Valid Dumps Files - Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 valid vce, and you will get unexpected results.

For example, architects and analysts can focus solely on the what" Test NCP-DB-6.10 Free part of a service when it is being conceptualized and designed, The Free Software community is well known for its diversity.

Pass Guaranteed 2026 Nutanix NCP-DB-6.10: Authoritative Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Valid Test Testking
