SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q42-Q47):

NEW QUESTION # 42

In SAP Central Business Configuration, which activities can you perform during Product-Specific Configuration? Note: There are 3 correct answers to this question.

- A. Modify building blocks.
- **B. Change approval thresholds.**
- C. Create new scope items.
- **D. Add new sales organizations.**
- **E. Add blocking reasons for billing.**

Answer: B,D,E

NEW QUESTION # 43

What is the correct release code for the second feature delivery in February 2025?

- A. 2025.2.2
- **B. 2502.2**
- C. 2025.2
- D. 0

Answer: B

Explanation:

The release code for SAP S/4HANA Cloud Public Edition follows the format YYYY.MM.X, where YYYY is the year, MM is the month, and X is the feature delivery number. The first feature delivery is always in February, and the second feature delivery is always in May. Therefore, the release code for the second feature delivery in February 2025 is 2502.2. NEW QUESTION # 44

In which type of extensibility is the SAP Business Technology Platform used to host a custom extension?

- A. Developer extensibility
- B. Key user extensibility
- C. Classic extensibility
- **D. Side-by-side extensibility**

Answer: D

Explanation:

Side-by-side extensibility is the type of extensibility where the SAP Business Technology Platform is used to host a custom extension and integrate it with the SAP S/4HANA Cloud system. Side-by-side extensibility enables customers and partners to build extensions that are decoupled from the core SAP S/4HANA Cloud system, ensuring lifecycle stability and avoiding modification of SAP code. Side-by-side extensibility leverages the capabilities of the SAP Business Technology Platform, such as SAP Cloud Platform Workflow Services, SAP Cloud Platform Business Rules, SAP Cloud Platform Integration, and SAP Cloud Platform Extension Factory. NEW QUESTION # 45

To which partner role does the IT Contact first assign access permission for SAP Cloud ALM?

- A. LOB configuration expert
- B. Lead configuration expert
- C. Project manager
- D. Communication contact

Answer: A

NEW QUESTION # 46

You are using the Test Automation Tool. When do you define a data variant?

- A. After customizing a test process.
- B. After providing consent for Post-Upgrade Testing.
- C. After binding a process step field to a Test Data Container.
- D. After creating a test plan.

Answer: A

Explanation:

A data variant is a set of data values that can be used to execute a test process in the Test Automation Tool.

You can define multiple data variants for a test process to test different scenarios with different input data. You can also use data variants to parameterize your test process and reuse it for different test cases1.

You define a data variant after binding a process step field to a Test Data Container. A Test Data Container is a reusable object that stores test data for a specific field or parameter. You can create and manage Test Data Containers in the Manage Test Data app. You can bind a process step field to a Test Data Container by selecting the field in the Test Automation Tool and choosing the Test Data Container from the list. This will create a link between the field and the Test Data Container, allowing you to use the data stored in the Test Data Container for the field2.

After binding a process step field to a Test Data Container, you can define a data variant by selecting the Test Data Container and choosing the Data Variant option. This will open a dialog where you can enter the data values for the data variant. You can also specify a name and a description for the data variant. You can create as many data variants as you need for a Test Data Container2. Therefore, the correct answer is B, as you define a data variant after binding a process step field to a Test Data Container.

References = 1 Test Automation Tool - SAP Help Portal 2 Test Data Containers - SAP Help Portal In the context of using the Test Automation Tool within SAP S/4HANA Cloud Public Edition, defining a data variant is a crucial step. This step occurs:

* After binding a process step field to a Test Data Container: A Test Data Container (TDC) is used to store data that can be reused across multiple test cases. When a field in a process step is bound to a TDC, it means that the test case will use the data specified within the TDC. After this binding, a data variant can be defined to specify different sets of data or conditions under which the test case should be executed. This allows for more flexible and comprehensive testing scenarios, ensuring that the application behaves as expected under various conditions.

NEW QUESTION # 47

.....

One of our outstanding advantages is our high passing rate, which has reached 99%, and much higher than the average pass rate among our peers. Our high passing rate explains why we are the top C_S4CPB_2508 prep guide in our industry. One point does farm work one point harvest, depending on strength speech! The source of our confidence is our wonderful C_S4CPB_2508 Exam Questions. Passing the exam won't be a problem as long as you keep practice with our C_S4CPB_2508 study materials about 20 to 30 hours.
