Huawei H12-891_V1.0 certification exam opens the doors for starting a bright career in the sector. After passing the Huawei H12-891_V1.0 test you will easily apply for good jobs in top companies all over the world. Huawei H12-891_V1.0 exam offers multiple advantages including, high salaries, promotions, enhancing resumes, and skills improvement. Once you pass the H12-891_V1.0 Exam, you can avail all these benefits. If you want to pass the Huawei H12-891_V1.0 certification exam, you must find the best resource to prepare for the Huawei H12-891_V1.0 test.

Huawei H12-891_V1.0 (HCIE-Datcom V1.0) Certification Exam is a professional-level certification exam that focuses on data communication technologies. HCIE-Datcom V1.0 certification is designed to validate the skills and knowledge required for professionals working in the data communication field, including network architects, engineers, and administrators.

Passing the Huawei H12-891_V1.0 (HCIE-Datcom V1.0) Certification Exam is a significant achievement for professionals in the field of data communication technologies. HCIE-Datcom V1.0 certification demonstrates the candidate's expertise and proficiency in designing, implementing, and troubleshooting complex data communication networks using Huawei's products and technologies. HCIE-Datcom V1.0 certification is recognized globally and can lead to better job opportunities, higher salaries, and professional growth.

Huawei H12-891_V1.0 Exam Dumps - Key To Getting Success

To practice for a HCIE-Datcom V1.0 in the software (free test), you should perform a self-assessment. The Huawei H12-891_V1.0 practice test software keeps track of each previous attempt and highlights the improvements with each attempt. The Huawei H12-891_V1.0 Mock Exam setup can be configured to a particular style & arrive at unique questions.

Huawei HCIE-Datcom V1.0 Sample Questions (Q100-Q105):

NEW QUESTION # 100

Router A has an IP route entry with a purposeful CIDR block of 10001/32 and an outgoing interface of GigabitEthernet0/0/1. Now add the following configuration: `acl number 2000 rule 10 permit source 1001.10 # traffic classifier test if-match acl 2000 # traffic behavior test remark dscp cs3 # traffic policy test classifier test behavior test # interface GigabitEthernet0/0/1 ip address 1001212552552550 traffic-policy test outbound #` assuming router A received a destination IP of 10001. Of packets, the following statements are correct:

- A. If the data packet source IP address is 1001.2, it can be forwarded with the DSCP field marked CS3
- B. If the packet source IP address is 1001.2, it cannot be forwarded
- C. If the packet source IP address is 1001.2, it can be forwarded while the DSCP field remains unchanged
- D. If the packet source IP address is 1001.1, it can be forwarded while the DSCP field is marked as CS3

Answer: C,D

NEW QUESTION # 101

ICMPv6 uses the Type field to identify the message type, and according to the value of the type field, we can divide the ICMPv6 message into two categories, one is the error message and the other is the information message

- A. False
- B. True

Answer: B

NEW QUESTION # 102

In Huawei's NAC solution, which of the following cannot be used for Portal authentication?

- A. SMS verification code
- B. User name and password
- C. User's MAC address
- D. Passcode

Answer: C

Explanation:

Huawei's Network Access Control (NAC) Portal authentication supports various identity authentication methods for user login via a web page. These include:

Username and password- standard method.

Passcode- one-time password or PIN.

SMS verification code- users receive a dynamic code via SMS for identity verification.

However:

MAC address authentication is used in MAC-based authentication, not Portal. MAC authentication allows a device to be authenticated using its MAC address without user interaction (i.e., not via a Portal page).

Correct answer: D. User's MAC address

NEW QUESTION # 103

Free mobility is deployed on a campus network through iMaster NCE-Campus. During this deployment, which of the following steps are performed by administrators and which are automatically performed by iMaster NCE-Campus? Drag the administrators and iMaster NCE-Campus icons on the left to the corresponding steps on the right.

Administrator		Deliver IP-security group entries.
Controller		Define a policy control matrix.
		Define security groups.

Explanation:

Explanation:

Comprehensive and Detailed In-Depth Explanation:

1. Free Mobility in Huawei Campus Networks:

Free mobility allows users to move freely within a campus network while retaining their access rights and security policies. It leverages iMaster NCE-Campus the controller to simplify the deployment and management of user policies.

2. Role of the Administrator:

Administrators are responsible for defining high-level policies and security configurations. Specifically:

Define a Policy Control Matrix:

Administrators create a matrix that specifies how users from different security groups interact.

This matrix outlines access permissions and is a part of the policy planning phase.

Define Security Groups:

Administrators categorize users, devices, or endpoints into security groups based on their roles or functions.

These groups form the basis for applying uniform policies within the network.

3. Role of iMaster NCE-Campus (Controller):

The controller handles the automatic delivery of configured policies and security settings to network devices.

Deliver IP-Security Group Entries:

Once the administrator defines the policies and groups, iMaster NCE-Campus automatically distributes the IP- Security Group Binding entries to the relevant network devices.

This ensures consistent policy enforcement across the campus.

4. Why This Mapping Is Correct:

Administrators define the structure and policies, while the controller (iMaster NCE-Campus) handles the implementation and distribution.

This division of responsibilities optimizes the network management process, reducing human error and ensuring that policies are consistently applied.

NEW QUESTION # 104

In ospf broadcast networks, there are 4 routers RTA, RTB, RTC, and RTDs within the same network segment. The DR priorities are 2, 1, 1, and 0, and the Router ID is respective 192.168.1.1, 192.168.2.1, 192.168.3.1, and 192.168.4.1. If the OSPF protocol is enabled on both of these four routers, ospf selects the BDR as

- A. RTA
- B. RTC
- C. RTD
- D. RTB

Answer: B
