最新的 Microsoft Azure Solutions Architect Expert AZ-305 免費考試真題 (Q358-Q363):

問題 #358

You have an Azure Functions microservice app named App1 that is hosted in the Consumption plan. App1 uses an Azure Queue Storage trigger.

You plan to migrate App1 to an Azure Kubernetes Service (AKS) cluster.

You need to prepare the AKS cluster to support App1. The solution must meet the following requirements:

- * Use the same scaling mechanism as the current deployment.
- * Support kubernetes and Azure Container Networking Interface (CNI) networking.

Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct answer is worth one point.

- A. Configure the horizontal pod autoscaler.
- B. Configure the virtual node add-on.
- C. Configure the AKS cluster autoscaler.
- D. Install Virtual Kubelet.
- E. Install Kubernetes-based Event Driven Autoscaling (KEDA).

答案: A,B

問題 #359

You have an Azure subscription that contains a storage account.

An application sometimes writes duplicate files to the storage account.

You have a PowerShell script that identifies and deletes duplicate files in the storage account. Currently, the script is run manually after approval from the operations manager.

You need to recommend a serverless solution that performs the following actions:

Runs the script once an hour to identify whether duplicate files exist

Sends an email notification to the operations manager requesting approval to delete the duplicate files
Processes an email response from the operations manager specifying whether the deletion was approved
Runs the script if the deletion was approved
What should you include in the recommendation?

- A. Azure Logic Apps and Azure Event Grid
- B. Azure Functions and Azure Batch
- C. Azure Logic Apps and Azure Functions
- D. Azure Pipelines and Azure Service Fabric

答案: C

解題說明:

You can schedule a powershell script with Azure Logic Apps.

When you want to run code that performs a specific job in your logic apps, you can create your own function by using Azure Functions. This service helps you create Node.js, C#, and F# functions so you don't have to build a complete app or infrastructure to run code. You can also call logic apps from inside Azure functions. Azure Functions provides serverless computing in the cloud and is useful for performing tasks such as these examples:

問題 #360

Your on-premises network contains a file server named Server1 that stores 500 GB of data.

You need to use Azure Data Factory to copy the data from Server1 to Azure Storage.

You add a new data factory.

What should you do next? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

<https://docs.microsoft.com/en-us/azure/data-factory/create-self-hosted-integration-runtime?tabs=data-factory>

"A self-hosted integration runtime can run copy activities between a cloud data store and a data store in a private network"

<https://docs.microsoft.com/en-us/azure/data-factory/introduction>

"With Data Factory, you can use the Copy Activity in a data pipeline to move data from both on-premises and cloud source data stores to a centralization data store in the cloud for further analysis"

問題 #361

You are designing an order processing system in Azure that will contain the Azure resources shown in the following table.

The order processing system will have the following transaction flow:

* A customer will place an order by using App1.

* When the order is received, App1 will generate a message to check for product availability at vendor 1 and vendor 2.

* An integration component will process the message, and then trigger either Function1 or Function2 depending on the type of order.

* Once a vendor confirms the product availability, a status message for App1 will be generated by Function1 or Function2.

* All the steps of the transaction will be logged to storage1.

Which type of resource should you recommend for the integration component?

Which type of resource should you recommend for the integration component?

- A. an Azure Data Factory pipeline
- B. an Azure Event Grid domain
- C. an Azure Service Bus queue
- D. an Azure Event Hubs capture

答案： A

解題說明：

A data factory can have one or more pipelines. A pipeline is a logical grouping of activities that together perform a task.

The activities in a pipeline define actions to perform on your data.

Data Factory has three groupings of activities: data movement activities, data transformation activities, and control activities.

Azure Functions is now integrated with Azure Data Factory, allowing you to run an Azure function as a step in your data factory pipelines.

問題 #362

You plan to use Azure SQL as a database platform.

You need to recommend an Azure SQL product and service tier that meets the following requirements:

* Automatically scales compute resources based on the workload demand

* Provides per second billing

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
