## Salesforce Sample Questions (Q72-Q77):

### NEW QUESTION # 72

開発者は次のテストメソッドを作成しました。

開発者組織には、名前が「Test」で始まるアカウントが5つあります。開発者は、開発者コンソールでこのテストを実行します。

テストコードが実行された後、どのステートメントが真になりますか？

- A. テストは失敗します。
- B. 名前が「Test」で始まるアカウントは存在しません。
- C. 名前が「Test」で始まるアカウントは6つあります。
- D. 名前が「Test」で始まるアカウントは5つあります。

Answer: D

Explanation:

Based on the test method code, the statement that is true after the test code runs is that there will be five accounts where the name starts with "Test". This is because the test method is running in API version 24.0 or later, which means that it can't access pre-existing org data by default, and can only access data that it creates. Therefore, the first query that retrieves the accounts where the name starts with "Test" will return an empty list, as there are no such accounts in the test context. The test method then inserts a new account with the name "Test1", which will be the only account that the test method can access. The second query that retrieves the accounts where the name starts with "Test" will return a list with one account, which is the account that was just inserted. The test method then asserts that the size of the list is equal to 1, which will pass. The test will not fail, as there is no assertion error or exception. There will not be no accounts where the name starts with "Test", as there is one account that was inserted by the test method. There will not be six accounts where the name starts with "Test", as the test method can't access the five accounts that exist in the org data. ### NEW QUESTION # 75

開発者は、Lightning Webコンポーネントの設定ファイルにコードを追加して、レコードページ上ではコンポーネントがデスクトップサイズのフォームファクタのみでレンダリングされるようにする必要があります。この要件を満たすには、コンポーネントのレコードページのターゲット設定に何を追加すればよいでしょうか？

- A. <supportedFormFactors> <supportedFormFactor type="Large"/> </supportedFormFactors>

- B. <design> ...
- C. <lightningLayout> </lightningLayout>
- D. <property name="formFactor" value="Large"> ...

#### Answer: A

Explanation:

In a Lightning Web Component's configuration file (.js-meta.xml), the <supportedFormFactors> tag allows the developer to specify which device form factors the component supports. To restrict the component to only render on desktop devices, the developer must specify the type="Large".

The structure is:

XML

```
<targetConfigs>
<targetConfig targets="lightning__RecordPage">
<supportedFormFactors>
<supportedFormFactor type="Large"/>
</supportedFormFactors>
</targetConfig>
</targetConfigs>
```

If supportedFormFactors is not specified, the component defaults to supporting both Small (phone) and Large (desktop) form factors. Options B, C, and D are incorrect syntax for defining form factor support in LWC metadata.
