

# Get Palo Alto Networks NetSec-Analyst Dumps For Quick Study [2026]

BONUS!!! Download part of Real4Prep NetSec-Analyst dumps for free: <https://drive.google.com/open?id=1UrfAVNpors14Nm0CQeQVqMPRMkbURunG>

Are you still feeling uncomfortable about giving up a lot of time to entertain, work or accompany your family and friends in preparation for the exam? Using NetSec-Analyst quiz torrent, you can spend less time and effort reviewing and preparing, which will help you save a lot of time and energy. Whether you are a worker or student, you will save much time to do something whatever you want. It only needs 5-10 minutes after you pay for our NetSec-Analyst learn torrent that you can learn it to prepare for your exam. Actually, if you can guarantee that your effective learning time with NetSec-Analyst test preps are up to 20-30 hours, you can pass the exam.

Nowadays, seldom do the exam banks have such an integrated system to provide you a simulation test. You will gradually be aware of the great importance of stimulating the actual NetSec-Analyst exam after learning about our NetSec-Analyst study tool. Because of this function, you can easily grasp how the practice system operates and be able to get hold of the core knowledge about the NetSec-Analyst Exam. In addition, when you are in the real exam environment, you can learn to control your speed and quality in answering questions and form a good habit of doing exercise, so that you're going to be fine in the NetSec-Analyst exam.

## NetSec-Analyst Exam Discount Voucher - New NetSec-Analyst Exam Pass4sure

Did you often feel helpless and confused during the preparation of the NetSec-Analyst exam? Do you want to find an expert to help but feel bad about the expensive tutoring costs? Don't worry. Our NetSec-Analyst exam questions can help you to solve all the problems. Our NetSec-Analyst Study Material always regards helping students to pass the exam as it is own mission. And we have successfully helped numerous of the candidates pass their exams.

## Palo Alto Networks Network Security Analyst Sample Questions (Q99-Q104):

### NEW QUESTION # 99

What does an application filter help you to do?

- A. It dynamically groups applications based on application attributes such as category and subcategory.

- B. It dynamically filters applications based on critical, high, medium, low, or informational severity.
- C. It dynamically provides application statistics based on network, threat, and blocked activity,
- D. It dynamically shapes defined application traffic based on active sessions and bandwidth usage.

**Answer: A**

#### **NEW QUESTION # 100**

Which set of options is available for detailed logs when building a custom report on a Palo Alto Networks NGFW?

- A. Threat, GlobalProtect, application statistics, WildFire submissions
- **B. Traffic, threat, data filtering, User-ID**
- C. GlobalProtect, traffic, application statistics
- D. Traffic, User-ID, URL

**Answer: B**

Explanation:

When building a custom report on a Palo Alto Networks NGFW, you can select detailed logs that provide specific insights into various aspects of firewall activity. The available options for detailed logs typically include:

Traffic logs: These provide information on the network traffic passing through the firewall.

Threat logs: These logs capture data related to identified security threats, such as malware or intrusion attempts.

Data filtering logs: These logs capture events related to data filtering policies, such as preventing the transfer of sensitive data.

User-ID logs: These logs associate user identities with the traffic and activities observed on the firewall, enabling user-based policy enforcement.

#### **NEW QUESTION # 101**

A security analyst is investigating a complex NAT issue on a Palo Alto Networks firewall. An internal application server (172.16.10.10) in the 'DMZ' zone needs to establish a connection to an external third-party API (api.example.com, IP: 198.51.100.20) on port 443. The firewall's 'External' interface has multiple public IP addresses (203.0.113.1, 203.0.113.2). The requirement is that all traffic from 172.16.10.10 to 198.51.100.20 must source NAT to 203.0.113.2, while all other outbound traffic from 172.16.10.10 should source NAT to 203.0.113.1. Additionally, the firewall has the following NAT policies configured (listed in order of evaluation):

Rule 1 (Dynamic IP and Port):

Original Packet:

Source Zone: DMZ  
Destination Zone: External  
Source Address: 172.16.10.0/24  
Destination Address: Any

Translated Packet:

Source Address: Interface Address (External interface)  
Source Port: Dynamic

Rule 2 (Static IP - Specific):

Original Packet:

Source Zone: DMZ  
Destination Zone: External  
Source Address: 172.16.10.10  
Destination Address: 198.51.100.20

Translated Packet:

Source Address: 203.0.113.2

Rule 3 (Destination NAT - Inbound Web Server):

Original Packet:

Source Zone: External  
Destination Zone: DMZ  
Destination Address: 203.0.113.15

Translated Packet:

Destination Address: 172.16.10.50

When 172.16.10.10 attempts to connect to 198.51.100.20, what will be the effective source IP address for this connection, and why? Assume the External interface's primary IP is 203.0.113.1.

- A. It depends on the order of security policies, not NAT policies, as NAT is processed after security.
- B. The connection will be dropped because of a NAT misconfiguration, preventing any translation.
- C. 203.0.113.1, because Rule 1 is evaluated first and matches the traffic.
- D. 203.0.113.2, because Rule 2 is more specific and therefore evaluated first.
- E. The connection will use a randomly selected IP from the firewall's available public IPs.

**Answer: C**

**Explanation:**

Palo Alto Networks firewalls process NAT rules in the order they appear in the policy list, from top to bottom, and the first match is applied. Rule 1 is a broader rule matching any traffic from 172.16.10.0/24 to 'Any' destination in the 'External' zone. Rule 2 is more specific for 172.16.10.10 to 198.51.100.20. However, since Rule 1 is listed BEFORE Rule 2, the traffic from 172.16.10.10 to 198.51.100.20 will match Rule 1 first, resulting in the source IP being translated to the 'External' interface's primary IP (203.0.113.1). To achieve the desired outcome, Rule 2 should be moved above Rule 1 in the NAT policy list.

**NEW QUESTION # 102**

Refer to the exhibit.

Given the topology, which zone type should interface E1/1 be configured with?

- A. Layer3
- **B. Tap**
- C. Virtual Wire
- D. Tunnel

**Answer: B**

#### NEW QUESTION # 103

Which built-in IP address EDL would be useful for preventing traffic from IP addresses that are verified as unsafe based on WildFire analysis Unit 42 research and data gathered from telemetry?

- A. Palo Alto Networks C&C IP Addresses
- B. Palo Alto Networks Bulletproof IP Addresses
- **C. Palo Alto Networks Known Malicious IP Addresses**
- D. Palo Alto Networks High-Risk IP Addresses

**Answer: C**

Explanation:

Palo Alto Networks Known Malicious IP Addresses

-Contains IP addresses that are verified malicious based on WildFire analysis, Unit 42 research, and data gathered from telemetry (Share Threat Intelligence with Palo Alto Networks). Attackers use these IP addresses almost exclusively to distribute malware, initiate command-and-control activity, and launch attacks.
