156-215.82日本語版復習指南 & 156-215.82資格試験

JpexamのCheckPointの156-215.82試験トレーニング資料を手に入れたら、あなたは認定試験に合格する鍵を手に入れるというのに等しいです。この認定は君のもっと輝い職業生涯と未来に大変役に立ちます。それはあなたが私たちを信じて、Jpexamを信じて、CheckPointの156-215.82試験トレーニング資料を信じることだけです。うちの学習教材の内容は正確性が高くて、CheckPointの156-215.82認定試験に合格する率は１００パッセントに

なっていました。

CheckPoint Check Point Certified Security Administrator - R82 認定 156-215.82 試験問題 (Q180-Q185):

質問 # 180
Can multiple administrators connect to a Security Management Server at the same time?

- A. No, only one can be connected
- B. Yes, every administrator has their own username, and works in a session that is independent of other administrators
- C. Yes, but only one has the right to write
- D. Yes, all administrators can modify a network object at the same time

正解：B

解説：
Multiple administrators can connect to a Security Management Server at the same time, and each administrator has their own username and works in a session that is independent of other administrators1. This allows concurrent administration and prevents conflicts between different administrators. The other options are incorrect. Only one administrator can be connected is false. All administrators can modify a network object at the same time is false, as only one administrator can lock and edit an object at a time. Only one has the right to write is false, as all administrators have write permissions unless they are restricted by roles or permissions. Security Management Server - Check Point Software

質問 # 181
Which option, when applied to a rule, allows all encrypted and non-VPN traffic that matches the rule?

- A. Specific VPN Communities
- B. Accept all encrypted traffic
- C. All Site-to-Site VPN Communities
- D. All Connections (Clear or Encrypted)

正解：B

解説：
The option that allows all encrypted and non-VPN traffic that matches the rule is Accept all encrypted traffic.This option enables you to allow traffic to any destination that is encrypted, regardless of whether it is part of a VPN community or not2. Therefore, the correct answer is B.Accept all encrypted traffic.

質問 # 182
Which icon in the WebUI indicates that read/write access is enabled?

- A. Padlock
- B. Book
- C. Pencil
- D. Eyeglasses

正解：C

解説：
The icon in the WebUI that indicates that read/write access is enabled is thePencilicon . The Pencil icon appears next to the name of the device when it is in Read/Write mode, which allows making changes to the configuration. The Padlock icon indicates that read-only access is enabled, which prevents making changes to the configuration. The Book icon indicates that online help is available, which provides information and guidance on using the WebUI. The Eyeglasses icon indicates that a view-only mode is enabled, which allows viewing the configuration without logging in.

質問 # 183
What are the Threat Prevention software components available on the Check Point Security Gateway?

- A. IDS, Forensics, Anti-Virus, Sandboxing
- B. IPS, Anti-Bot, Anti-Virus, Threat Emulation and Threat Extraction
- C. IPS, Anti-Bot, Anti-Virus, SandBlast and Macro Extraction
- D. IPS, Threat Emulation and Threat Extraction

正解：B

解説：
Threat Prevention is a comprehensive solution that protects networks from malicious attacks by using multiple security blades, such as Anti-Bot, Anti-Virus, IPS, Threat Emulation, and Threat Extraction. These are the Threat Prevention software components available on the Check Point Security Gateway. IPS (Intrusion Prevention System) is a blade that detects and prevents network attacks by using signatures and behavioral patterns. Anti-Bot is a blade that detects and blocks botnet communications by using reputation services and heuristics. Anti-Virus is a blade that scans files and web content for malware by using signatures and emulation. Threat Emulation is a blade that analyzes suspicious files in a sandbox environment and blocks malicious files from entering the network.Threat Extraction is a blade that removes exploitable content from files and delivers clean files to users2. Check Point R81 Threat Prevention Administration Guide

質問 # 184
What is the SOLR database for?

- A. Writes data to the database and full text search
- B. Used for full text search and enables powerful matching capabilities
- C. Serves GUI responsible to transfer request to the DLE server
- D. Enables powerful matching capabilities and writes data to the database

正解：B

解説：
The SOLR database is used for full text search and enables powerful matching capabilities3. SOLR is an open source enterprise search platform that provides fast and scalable indexing and searching of data. It supports advanced features such as faceting, highlighting, spell checking, synonyms, etc.The SOLR database is used by Check Point products such as SmartLog and SmartEvent to store and query logs and events3. The other options are incorrect. Option B is false, as SOLR does not write data to the database, but only reads data from it. Option C is false, as SOLR does not serve GUI, but only provides a RESTful API for queries. Option D is false, as SOLR does not enable powerful matching capabilities and write data to the database, but only enables powerful matching capabilities. SOLR - Check Point Software, [Apache Solr]
