Test H35-210_V2.5 Engine & H35-210_V2.5 Associate Level Exam

Our industry experts are constantly adding new content to H35-210_V2.5 test dumps based on constantly changing syllabus and industry development breakthroughs. We also hired dedicated IT staff to continuously update our question bank daily, so no matter when you buy H35-210_V2.5 Study Materials, what you learn is the most advanced. Even if you fail to pass the exam, as long as you are willing to continue to use our H35-210_V2.5 test answers, we will still provide you with the benefits of free updates within a year.

Huawei H35-210_V2.5 exam is an excellent certification program for those who are interested in pursuing a career in network engineering. HCIA-Access V2.5 certification validates the candidate's knowledge and skills in network access technologies and helps them stand out in the job market. HCIA-Access V2.5 certification also provides opportunities for career advancement and higher salaries.

Huawei H35-210_V2.5 (HCIA-Access V2.5) Certification Exam is a computer-based exam that is conducted at designated testing

centers. H35-210_V2.5 exam consists of 60 multiple-choice questions and has a duration of 90 minutes. To pass the exam, candidates must score at least 60% on the exam. H35-210_V2.5 exam is available in both English and Chinese languages.

Huawei HCIA-Access V2.5 Sample Questions (Q262-Q267):

NEW QUESTION # 262

When the MA5600T configures the multicast service, which of the following options must be configured, otherwise the multicast program may not be able to be viewed?

- A. igmp profile
- B. igmp program
- C. igmp user
- D. Multicast VLAN

Answer: C,D

NEW QUESTION # 263

The routing table of a router contains the following two entries:

Destination/Mask Protocol Pre Cost Nexthop Interface

9.0.0.0/8 OSPF 10 50 1.1.1.1 Serial0

9.1.0.0/16 RIP 100 5 2.2.2.2 Ethernet0

If the router needs to forward packets with the destination address of 9.1.4.5, which of the following statements is correct?

- A. The router selects the first route, because the priority of OSPF is higher.
- B. The router selects the second route, because the outbound interface is Ethernet0, which is faster than Serial0.
- C. The router selects the second route, because this route matches the destination address 9.1.4.5 more accurately.
- D. The router selects the second route, because the metric of RIP is smaller.

Answer: C

Explanation:

When a router forwards packets, it selects the route with the longest prefix match (most specific route) for the destination address.

First Route: Matches 9.0.0.0/8, which covers all IP addresses starting with 9.

Second Route: Matches 9.1.0.0/16, which is more specific and covers IP addresses starting with 9.1.

For the destination address 9.1.4.5, the second route (9.1.0.0/16) is a better match because it is more specific than the first route (9.0.0.0/8).

Option A: Incorrect. OSPF has a higher priority, but the longest prefix match takes precedence over priority.

Option B: Correct. The second route matches the destination address more accurately.

Option C: Incorrect. Metric is not considered when comparing routes with different prefix lengths.

Option D: Incorrect. Interface speed is irrelevant in route selection.

NEW QUESTION # 264

Which of the following slots can the TSSB board of UA5000 high-density be inserted in?

- A. 0
- B. 4, 5
- C. 6, 7
- D. 1

Answer: D

NEW QUESTION # 265

What technology does the GPON system use to provide the original CATV service?

- A. Serdes
- B. Multicast
