Do you have bought the Nutanix pdf version for your preparation? If not, hurry up to choose our NCP-MCI-6.10 pdf torrent. Our NCP-MCI-6.10 pdf study material is based on the NCP-MCI-6.10 real exam scenarios covering all the exam objectives. You will find it is very helpful and precise in the subject matter since all the NCP-MCI-6.10 Exam contents is regularly updated and has been checked and verified by our professional experts. NCP-MCI-6.10 will help you to strengthen your technical knowledge and allow you pass at your first try.

Nutanix NCP-MCI-6.10 Exam Syllabus Topics:

Topic	Details
Topic 1	• Troubleshoot a Nutanix Multicloud Environment: This section of the exam measures the skills of Technical Support Engineers and IT Operations Specialists and covers diagnosing and resolving common issues within a Nutanix multi-cloud environment. Troubleshooting protection policies and recovery plans requires identifying network mapping failures, vNIC issues, script execution problems, and connectivity failures. Metro replication troubleshooting involves addressing naming conventions, network limitations, and replication states. Security issues in AOS and Prism Central must be resolved by managing CVM communications, security warnings, and log analysis. LCM operations require diagnosing failures in inventory updates and version upgrades. Performance troubleshooting involves analyzing logs, reading performance charts, and adjusting VM configurations to meet performance needs.
Topic 2	• Manage VMs within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Administrators and Virtualization Engineers and covers managing virtual machines (VMs) within a Nutanix multicloud environment. It includes creating and updating VMs by determining hardware requirements, boot modes, sizing, and configuration based on application needs. Candidates must understand how to deploy VMs using templates, snapshots, and image configurations, ensuring the correct formats for importing and exporting VMs. Migration processes require knowledge of prerequisites, storage, network settings, and software compatibility. Additionally, configuring VM categories and attributes is essential for proper organization and management within the environment, ensuring alignment with labels, storage policies, and security settings.

Topic 3	• Conduct Custom Monitoring within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Analysts and Systems Engineers and covers custom monitoring for optimized performance management. Candidates must analyze performance charts, set retention policies, create custom service level agreements (SLAs), and manage storage based on policies. Creating reports involves identifying the required type, selecting generation frequency, determining retention properties, and customizing report formats for different monitoring needs. Effective monitoring ensures better resource utilization, system efficiency, and proactive issue resolution within the multi-cloud environment.
Topic 4	• Manage Clusters within a Nutanix Multicloud Environment: This section of the exam measures the skills of Infrastructure Engineers and Systems Administrators and covers the administration of Nutanix clusters. Storage management includes creating, reading, updating, and deleting storage containers and volume groups. Configuring AOS and Prism Central settings involves authentication, SSL certificate management, IAM role-based access control, and configuring network segmentation. Network administration procedures focus on creating VLAN-backed subnets, virtual switches, and load-balancing policies while monitoring NIC usage. Lifecycle management includes performing hardware and software updates and maintaining firmware. Hardware maintenance involves adding or removing nodes and physical disks while ensuring proper upgrades and replacements. Intelligent operations require configuring capacity policies, discovering application relationships, and simulating scenarios to optimize performance.
Topic 5	• Configure Disaster Recovery and Data Protection within a Nutanix Multicloud Environment: This section of the exam measures the skills of Disaster Recovery Specialists and Cloud Engineers and covers configuring protection policies and domains for data security and recovery. Candidates need to identify the right entities for protection, schedule backups, define retention policies, and set up replication to remote sites. Recovery plans must be configured and executed with proper scripting, network mapping, and failover strategies. Metro replication requires understanding failover methodologies, comparing solutions on different hypervisors, and preventing split-brain scenarios. Effective disaster recovery planning ensures minimal downtime and data integrity across environments.

Boost Your Confidence with Nutanix NCP-MCI-6.10 Questions PDF

Today is the right time to learn new and in demands skills. You can do this easily, just get registered in certification exam and start preparation with Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) NCP-MCI-6.10 exam dumps. The Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) NCP-MCI-6.10 pdf questions and practice test are ready for download. Just pay the affordable NCP-MCI-6.10 authentic dumps charges and click on the download button. Get the NCP-MCI-6.10 latest dumps and start preparing today.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Sample Questions (Q94-Q99):

NEW QUESTION # 94
Which tool in Nutanix can be used to gather logs for troubleshooting and support?

- A. Nutanix Move
- B. NCC (Nutanix Cluster Check)
- C. LCM (Life Cycle Manager)
- D. X-Ray

Answer: B

NEW QUESTION # 95
In an RF2 cluster, what is the minimum number of nodes required to allow a host removal?

- A. 0

- B. 1
- C. 2
- D. 3

Answer: D

Explanation:
Replication Factor (RF2) means that each piece of data is stored twice across different nodes to ensure availability.
* Option B (3 nodes) is correct:
* In an RF2 cluster, data redundancy requires at least three nodes to ensure data protection when one node is removed.
* If a node is removed from a 3-node cluster, Nutanix automatically redistributes data across the remaining nodes.
* Option A (2 nodes) is incorrect:
* RF2 requires at least three nodes to maintain fault tolerance.
* A 2-node cluster cannot provide full redundancy without a Witness node.
* Option C (4 nodes) and Option D (5 nodes) are incorrect:
* While larger clusters provide more redundancy, the minimum requirement is 3 nodes.
References:
* Nutanix Bible #Replication Factor (RF) and Fault Tolerance
* Nutanix Prism Element Guide #Managing Node Failures and Removals

NEW QUESTION # 96
Which predefined view should be leveraged in Prism Central Intelligent Operations to determine which VM is consuming too many resources and causing other VMs to starve?

- A. Bully VMs List
- B. Constrained VMs List
- C. Overprovisioned VMs List
- D. Inactive VMs List

Answer: A

Explanation:
The Bully VMs List view in Prism Central's Intelligent Operations identifies VMs that are consuming excessive resources (CPU, memory, or storage IO) and causing resource starvation for other VMs.
From the Nutanix ECA documentation:
"Bully VMs List identifies virtual machines with high resource consumption, enabling administrators to investigate and take action to prevent performance degradation in other VMs." The other options:
* A (Constrained VMs): Shows VMs that are being starved of resources.
* C (Inactive VMs): Shows VMs that are using little to no resources.
* D (Overprovisioned VMs): Shows VMs with allocated resources beyond actual usage.

NEW QUESTION # 97
An administrator needs to ensure that a VM is powered on before the rest of the VMs when starting a host.
Which configuration option allows this behavior?

- A. Host Affinity
- B. Recovery Plan
- C. Agent VM
- D. High Availability

Answer: D

Explanation:
High Availability (HA) in Nutanix provides priority-based VM restart capabilities to ensure that certain VMs are powered on before others in the event of a host reboot or failure.
* Option C (High Availability) is correct:
* Nutanix HA policies allow administrators to prioritize VM startup order to ensure that critical services (such as database VMs or management VMs) are available before others.
* Option A (Recovery Plan) is incorrect:

* Recovery Plans are used inDisaster Recovery (DR) scenariosand do not control boot order during normal host restarts.
* Option B (Host Affinity) is incorrect:
* Host Affinity is used tokeep a VM pinned to a specific host, but it does not control boot sequencing.
* Option D (Agent VM) is incorrect:
* Agent VMs (such asWitness VMs) are specialized virtual machines used forMetro Availability, not general boot priority settings.

* Nutanix Bible #High Availability (HA) and VM Failover
* Nutanix KB #VM Restart Priority in High Availability Configurations

NEW QUESTION # 98
Which Nutanix feature predicts future resource utilization and capacity needs?

* A. Nutanix Move
* B. Nutanix Beam
* C. Xi IoT
* D. Prism Pro Capacity Planning

Answer: D

NEW QUESTION # 99
......

We want to provide our customers with different versions of NCP-MCI-6.10 test guides to suit their needs in order to learn more efficiently. Our NCP-MCI-6.10 qualification test can help you make full use of the time and resources to absorb knowledge and information. If you are accustomed to using the printed version of the material, we have a PDF version of the NCP-MCI-6.10 study tool for you to download and print, so that you can view the learning materials as long as you have free time. If you choose to study online, we have an assessment system that will make an assessment based on your learning of the NCP-MCI-6.10 qualification test to help you identify weaknesses so that you can understand your own defects of knowledge and develop a dedicated learning plan. Moreover our NCP-MCI-6.10 test guides provide customers with supplement service-mock test, which can totally inspire them to study hard and check for defects during their learning process. Our commitment is not frank, as long as you choose our NCP-MCI-6.10 study tool you will truly appreciate the benefits of our products.
