

Appian ACA100 Exam Dumps Help You Achieve Success Faster

P.S. Free & New ACA100 dumps are available on Google Drive shared by Actual4Cert: <https://drive.google.com/open?id=1cz6rtjqZnClueqss5Gg19iNsjSf8czEE>

Actual4Cert's Appian ACA100 exam training materials not only can save your energy and money, but also can save a lot of time for you. Because the things what our materials have done, you might need a few months to achieve. So what you have to do is use the Actual4Cert Appian ACA100 Exam Training materials. And obtain this certificate for yourself. Actual4Cert will help you to get the knowledge and experience that you need and will provide you with a detailed Appian ACA100 exam objective. So with it, you will pass the exam.

Do you still have the ability to deal with your job well? Do you think whether you have the competitive advantage when you are compared with people working in the same field? If your answer is no, you are a right place now. Because our ACA100 exam torrent will be your good partner and you will have the chance to change your work which you are not satisfied with, and can enhance your ability by our ACA100 Guide questions, you will pass the exam and achieve your target.

>> ACA100 Exam Actual Tests <<

Free ACA100 Vce Dumps | Reliable ACA100 Test Dumps

Our company committed all versions of ACA100 practice materials attached with free update service. When ACA100 exam preparation has new updates, the customer services staff will send you the latest version. So we never stop the pace of offering the best services and ACA100 practice materials for you. And we offer you the free demo of our ACA100 Learning Materials to check the quality before payment. Tens of thousands of candidates have fostered learning abilities by using our ACA100 Learning materials you can be one of them definitely.

Appian Certified Analyst Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which one of the following Appian object combinations allows you to directly access and use data from the Appian database?

- A. An expression rule with an integration call
- **B. An expression rule with a query**
- C. An interface object with an integration call
- D. A process model that uses an Export to Excel smart service

Answer: B

Explanation:

In Appian, the combination of an expression rule with a query allows you to directly access and use data from the Appian database.

Expression rules are used to define business logic, while queries are used to retrieve data from the database.

* Expression Rule with a Query :

* An expression rule can be used to execute a query against the Appian database to retrieve data.

* This combination allows you to filter, sort, and manipulate the data retrieved directly from the database within your application logic.

* The a!queryEntity() function is commonly used within an expression rule to fetch data from a specific entity in the database.

* Why Not Other Options? :

* A. An expression rule with an integration call : This option is used for retrieving data from external systems, not directly from the Appian database.

* C. A process model that uses an Export to Excel smart service : This is used for exporting data to Excel but does not directly access the database for querying purposes.

* D. An interface object with an integration call : This combination is also used for interfacing with external systems rather than directly accessing the Appian database.

* Implementation in Appian :

* Define an expression rule that uses a!queryEntity() to fetch data from a specific table or view in the Appian database.

* The query can be customized with filters, sorting, and paging to retrieve the exact data needed for the application.

Appian Documentation on Expression Rules: Expression Rules in Appian

Appian Query Entity Function: a!queryEntity() Function

NEW QUESTION # 61

You are working with a Product Owner who is not familiar with user story creation. You need to assist them in labelling the stories. Match the label to the appropriate user story. Each label will be used once.

"As part of the marketing team, I want to easily create new client contracts from a standard template, so that I can send them out quickly so as not to lose business."

Select a match:

Reporting
Integration
User Experience
Document generation

"As a Marketing Manager, I want to be able to access the application 24/7, so that I can add potential client opportunities at any time of the day."

Select a match:

Reporting
Integration
User Experience
Document generation

"As a Marketing Manager, I want to view which of the regions we operate in are most profitable, so that I can know where to focus my marketing strategy."

Select a match:

Reporting
Integration
User Experience
Document generation

"As a part of the marketing team, I want to look up data that is held on a particular company via a central government website, so that I can be sure the company exists."

Select a match:

Reporting
Integration
User Experience
Document generation

Answer:

Explanation:

"As part of the marketing team, I want to easily create new client contracts from a standard template, so that I can send them out quickly so as not to lose business."

Select a match:

- Reporting
- Integration
- User Experience
- Document generation

"As a Marketing Manager, I want to be able to access the application 24/7, so that I can add potential client opportunities at any time of the day."

Select a match:

- Reporting
- Integration
- User Experience
- Document generation

"As a Marketing Manager, I want to view which of the regions we operate in are most profitable, so that I can know where to focus my marketing strategy."

Select a match:

- Reporting
- Integration
- User Experience
- Document generation

"As a part of the marketing team, I want to look up data that is held on a particular company via a central government website, so that I can be sure the company exists."

Select a match:

- Reporting
- Integration
- User Experience
- Document generation

Explanation:

"As part of the marketing team, I want to easily create new client contracts from a standard template, so that I can send them out quickly as not to lose business."	Document generation
"As a Marketing Manager, I want to be able to access the application 24/7, so that I can add potential client opportunities at any time of the day."	User Experience
"As a Marketing Manager, I want to view which of the regions we operate in are most profitable, so that I can know where to focus my marketing strategy."	Reporting
"As a part of the marketing team, I want to look up data that is held on a particular company via a central government website, so that I can be sure the company exists."	Integration

This question tests story categorization, which is explicitly part of the Appian Certified Analyst exam objective: candidates must be able to "categorize user stories and collect appropriate requirements based on categorization." The contract-template story is Document generation because the business value is producing a repeatable client contract from a standard template; Appian documentation describes templates that users can select to generate documents in a guided flow. The 24/7 access story is User Experience because it concerns when and how a user can access the application, not analytics or external data exchange; Appian Sites and user experience capabilities focus on giving users quick access to pages, tasks, and information. The profitability-by-region story is Reporting because it requires visualizing business performance data to support decisions; Appian dashboards are used to display charts, grids, and KPIs. The government-company-lookup story is Integration because it requires connecting to an external system to retrieve data; Appian HTTP integrations are designed to connect to external systems and receive responses.

NEW QUESTION # 62

You are part of a project team building an application for organizing and automating an approval process for purchase orders. Each purchase order requires approvals from multiple users within the application, and these approvals are sequential (for example, User B receives an approval task after the completion of User A ' s approval task). Your team is responsible for showing the approval step of each purchase order on its purchase order record. Which Appian interface component should you use to best display the completed, current, and future approval steps for each purchase order?

- A. Gauge Component
- **B. Milestone Component**
- C. Progress Bar Component
- D. Org Chart Component

Answer: B

Explanation:

The Milestone Component in Appian is the best choice for displaying the completed, current, and future approval steps of each purchase order. This component visually represents the progression of a process with distinct milestones, making it ideal for sequential tasks like approvals. Each milestone can indicate whether the step is completed, active, or pending, providing a clear and intuitive view of the approval process for users.

Reference: Appian Documentation - Milestone Component

Note: The Progress Bar Component (A) is more suited for linear progress representation rather than distinct stages. The Gauge Component (B) and Org Chart Component (D) are not appropriate for this type of sequential task display.

NEW QUESTION # 63

What is the deliverable for the requirement gathering phase?

- A. A document with some requirements needed for the "analysis" phase
- **B. A backlog of requirements**
- C. Test cases
- D. Epics

Answer: B

Explanation:

The correct answer is D. A backlog of requirements . In Appian's Agile delivery approach, requirements gathering is not intended to produce a static requirements document for a later analysis phase. Instead, the team collaborates with stakeholders to understand goals, users, current-state processes, pain points, and required application behavior, then converts that understanding into a prioritized product backlog. Appian's Delivery Methodology describes the Initiate phase goal of exploring scope as establishing "a backlog of requirements" with sufficient detail to begin delivery, and the scope activity culminates in building the Product Backlog. Option A reflects a more waterfall-oriented handoff artifact and is not the primary Agile deliverable. Option B , test cases, belongs to validation and quality activities rather than initial requirement gathering. Option C , epics, may be used to group or organize larger bodies of work, but epics alone are not the final deliverable of requirements gathering. The actionable output is the backlog, typically decomposed into epics, features, and user stories as refinement continues. Relevant Appian Certified Analyst topics include Appian Delivery Methodology, Initiate Phase, Explore Scope, Product Backlog, Requirements Gathering, User Stories, and Agile Planning .

NEW QUESTION # 64

You are translating a user requirement into a user story and need to ensure that the desired functionality will be delivered as expected.

What needs to be written into the user story to ensure it will meet the requirement?

- A. Test Script
- **B. Acceptance criteria**
- C. Estimation of effort to develop
- D. Business value

Answer: B
