질문 # 25

You recently configured a new SVM and enabled jumbo frames (MTU 9000) on NetApp ONTAP software and on the clients. However, some clients are experiencing timeouts or degraded performance when accessing the system. You are using the ping -lif

NAME -vserver NAME - destination CLIENTIP -disallow-fragmentation true -packet-size XXX command to test the network path for jumbo frames. What value must be used on the parameter packet-size?

- A. 0
- B. 1
- C. 2
- D. 3

정답: C

설명:

When testing jumbo frames with ICMP, the packet-size value must account for the IP and ICMP headers. For an MTU of 9000 bytes, subtracting the 28 bytes of header overhead results in a payload size of 8972 bytes, which correctly validates end-to-end jumbo frame support.
