Plat-Admn-202시험난이도 최신인증시험덤프데모

ExamPassdump에서는 Salesforce 인증 Plat-Admn-202시험대비덤프를 발췌하여 제공해드립니다. Salesforce 인증 Plat-Admn-202시험대비덤프에는 시험문제의 모든 예상문제와 시험유형이 포함되어있어 시험준비자료로서 가장 좋은 선택입니다. ExamPassdump에서 제공해드리는 전면적인 Salesforce 인증 Plat-Admn-202시험대비덤프로 Salesforce 인증 Plat-Admn-202시험준비공부를 해보세요. 통과율이 100%입니다.

Salesforce Plat-Admn-202 시험요강:

주제	소개
주제 1	• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
주제 2	• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.
주제 3	• App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.

주제 4	• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
주제 5	• User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.

최신 Salesforce Developer Plat-Admn-202 무료샘플문제 (Q147-Q152):

질문 # 147
Universal Containers is adding drone delivery to service offerings, and the developer has written and tested code prior to deployment to production, and the change set is ready to go. The deployment window will occur when the developer is on vacation. What can the app builder do to ensure a smooth deployment to production?

- A. Use a metadata package set.
- B. Remove Apex classes from Abound change set.
- C. Validate the inbound change set.
- D. Validate the outbound change set.

정답：C

설명：
The app builder should validate the inbound change set to ensure a smooth deployment to production. Validating an inbound change set allows the app builder to test whether the change set can be deployed without errors in the target org. Validating an inbound change set does not affect any data or metadata in the target org.

질문 # 148
Cloud Kicks (CK) Is finding sales reps are Inconsistent in data entry when deals are won. CK requires that custom shoes are shipped within two weeks after the close date. A custom field called Scheduled Ship Date on the opportunity records the ship date.How should the app butler ensure this field is properly filed out before setting the opportunity to closed won?

- A. OR(ISPICKVAL(StageName ="Closed Won") && (Scheduled_Ship_Date__c- CloseDate) > 14,ISBLANK(Scheduled_Ship_Date__c))
- B. ISPICKVAL(StageName= CloseDate) > 14,losed Won") && (CloseDateScheduled_Ship_Date_c) >14
- C. ISPICKVAL(StageName ,"Closed Won") && (Scheduled _Ship_Date_c-CloseDate) > 14
- D. OR(ISPICKVAL(StageName ,"Closed Won") && (Scheduled_Ship_Date_cCloseDate)>14,ISBLANK(Scheduled_Ship_Date_c))

정답：**D**

설명：

The correct validation rule formula to ensure that the Scheduled Ship Date field is properly filled out before setting the Opportunity to Closed Won is:

OR(ISPICKVAL(StageName ,"Closed Won") && (

Scheduled_Ship_Date_cCloseDate)>14,ISBLANK(Scheduled_Ship_Date_c)) This formula checks two conditions: if the StageName is Closed Won and the Scheduled Ship Date is more than 14 days after the Close Date, or if the Scheduled Ship Date is blank. If either condition is true, the validation rule will fire and prevent saving the record. The other formulas are incorrect because they either use incorrect syntax (such as "=" instead of "," or missing parentheses) or incorrect logic (such as checking if the Scheduled Ship Date is less than 14 days after the Close Date)

질문 # 149

Sales Managers want to be automatically notified any time there is a change to an Opportunity Close Date and want these changes to be tracked on the Opportunity.

Which two configurations should an app builder recommend?

Choose 2 answers

- A. Use Process Builder on Opportunities and a Chatter post action.
- B. Activate Historical Trending for Opportunities.
- C. Create an Opportunity outbound message.
- D. Enable Feed Tracking on Opportunities.

정답：**A,D**

설명：

Using Process Builder on Opportunities and a Chatter post action, and enabling Feed Tracking on Opportunities are two configurations that an app builder can recommend to meet the requirement of notifying and tracking changes to an Opportunity Close Date. Process Builder can create a process that triggers a Chatter post action when the Close Date field is changed on an Opportunity. Feed Tracking can enable tracking of field history for the Close Date field on the Opportunity feed. Creating an Opportunity outbound message and activating Historical Trending for Opportunities are not valid configurations for this requirement.

질문 # 150

Cloud Kicks (CK) wants to track orders against inventory, ensuring its ability to fulfill order requests. CK created a junction object called Request Inventory to enable many-to-many relationships with the Inventory and Order objects.

What does the app builder need to provide to ensure users can view Request Inventory records?

- A. Sharing rules on Request Inventory object.
- B. Read access to the first master object.
- C. Read access to both master objects.
- D. Apex-based sharing on the first master object.

정답：**C**

설명：

To view a junction object record, a user must have at least read access to both master objects. This is because the junction object inherits the sharing and security settings from both master objects

질문 # 151

Universal Containers wants to create a custom checkbox formula field on the Opportunity object. This formula should evaluate to TRUE if the following conditions are met:

Stage is set to Negotiation/Review

Close Date is less than 1 week away

Which formula meets these requirements?

- A. AND(StageName = "Negotiation/Review", CloseDate - 7 < TODAY())
- B. AND(StageName = 'Negotiation/Review', CloseDate - DAY(7) < TODAY())
- C. AND(ISPICKVAL(StageName, 'Negotiation/Review'), CloseDate - 7 < TODAY())

- D. AND(ISPICKVAL(StageName, 'Negotiation/Review'), CloseDate - DAY(7) < TODAY())

정답：C

설명：

To test a picklist field in a formula, ISPICKVAL must be used. To check if the CloseDate is within 7 days of the current date, you can use simple date arithmetic (CloseDate - 7 < TODAY()).

Why A is correct:Exact Extract:"Use ISPICKVAL to determine if a picklist field has a specific value." - Salesforce Help | ISPICKVAL Function"Date formulas can use arithmetic to compare a date to TODAY(). For example, CloseDate - 7 < TODAY() returns TRUE if CloseDate is within the next week." - Salesforce Help | Date Functions and Operators Why not B:Picklist fields cannot be compared with =; this formula would fail to compile.

Why not C or D:The function DAY() returns the day of the month from a date - not a duration. DAY(7) is invalid in this context.
