Fortinet FCP - FortiSIEM 7.2 Analyst Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which items are used to define a subpattern?

- A. Filters, Aggregate, Time Window definitions
- B. Filters, Threshold, Time Window definitions
- C. Filters, Aggregate, Group By definitions
- D. Filters, Group By, Threshold definitions

Answer: C

Explanation:

A subpattern in FortiSIEM is defined using Filters to match specific events, Aggregate conditions to apply statistical thresholds (e.g., COUNT), and Group By attributes to segment data for evaluation. These three components collectively determine how the subpattern functions.

NEW QUESTION # 34

Refer to the exhibit.

Given these Subpattern relationships:

Subpattern	Attribute	Operator	Subpattern	Attribute	Next	Row
RDP_Connection	User	=	Failed_Logon	User	AND	<input type="button" value="v"/> <input type="button" value="v"/>
RDP_Connection	Source IP	=	Failed_Logon	Source IP		<input type="button" value="v"/> <input type="button" value="v"/>

Which two conditions will match this rule and subpatterns? (Choose two.)

- A. A user fails twice to log in when connecting through RDP.
- B. A user using RDP over SSL VPN fails to log in to an application five times.
- C. A user connects to the wrong IP address for an RDP session five times.
- D. A user runs a brute force password cracker against an RDP server.

Answer: B,D

Explanation:

The user initiates an RDP session (Subpattern 1) and then fails to log in multiple times (Subpattern 2 with COUNT(Matched Events) >= 3) - both from the same Source IP and User within 300 seconds.

The brute force attempts typically involve a successful RDP connection followed by multiple failed logins, satisfying the sequence and grouping conditions in the rule.
