1 / 6

P.S. Free & New AAISM dumps are available on Google Drive shared by ValidDumps: https://drive.google.com/open?id=18UllVjqnyZAuny2o8gyiTd5N_azu62Ev

False AAISM practice materials deprive you of valuable possibilities of getting success. As professional model company in this line, success of the AAISM training guide will be a foreseeable outcome. Even some nit-picking customers cannot stop practicing their high quality and accuracy. We are intransigent to the quality issue and you can totally be confident about their proficiency sternly. Choosing our AAISM Exam Questions is equal to choosing success.

ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.
Topic 2	<ul style="list-style-type: none">AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.

Topic 3	<ul style="list-style-type: none"> AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.

AAISM Reliable Dumps Ppt, Hot AAISM Questions

If you buy and use the AAISM study materials from our company, we believe that our study materials will make study more interesting and colorful, and it will be very easy for a lot of people to pass their exam and get the related certification if they choose our AAISM study materials and take it into consideration seriously. Now we are willing to introduce the AAISM Study Materials from our company to you in order to let you have a deep understanding of our study materials. We believe that you will benefit a lot from our AAISM study materials.

ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q179-Q184):

NEW QUESTION # 179

When implementing a generative AI system, which of the following approaches will BEST prevent misalignment between the corporate risk appetite and tolerance?

- A. Ensuring effective AI key performance indicators (KPIs)
- B. Creating and maintaining an AI risk register
- C. Establishing and monitoring acceptable levels of AI system risk
- D. Performing an AI impact assessment

Answer: C

Explanation:

AAISM governance guidance specifies that alignment between AI system adoption and organizational risk appetite is achieved by defining and monitoring acceptable levels of system risk. This ensures that generative AI operations remain within boundaries approved by leadership and compliance frameworks. While KPIs track performance, they do not ensure alignment with risk tolerance. AI impact assessments help identify risks but do not maintain continuous oversight. A risk register records risks but does not dynamically enforce acceptable thresholds. The most effective governance approach is to establish and monitor acceptable AI system risk levels.

NEW QUESTION # 180

To ensure ethical and responsible AI use, which AI usage policy metric is MOST important to monitor?

- A. Number of AI projects reviewed for compliance
- B. Number of policy violations
- C. Frequency of policy reviews and updates
- D. Frequency of policy consultations by employees

Answer: D

Explanation:

AAISM states the most meaningful policy performance metric is how often employees consult AI policies, which reflects:

- * awareness
- * practical adoption
- * reliance on policy guidance
- * safe decision-making behavior

Violations (A) are lagging indicators. Compliance reviews (B) measure oversight, not behavior. Policy review frequency (D) tracks governance updates, not usage.

References: AAISM Study Guide - AI Policy Effectiveness Metrics.

NEW QUESTION # 181

Within an incident handling process, which of the following would BEST help restore end user trust with an AI system?

- A. The AI model's outputs are validated by team members
- B. Remediation of the AI system based on lessons learned
- C. The AI model prioritizes incidents based on business impact
- D. AI is being used to monitor incident detection and alerts

Answer: A

Explanation:

Restoring end user trust during incident handling requires visible, immediate assurance that system outcomes are safe and appropriate. AAISM prescribes human oversight and approval gates for high-risk AI decisions, with human validation of outputs before use as a primary control to maintain trust while technical remediation is underway. Prioritization (A) and monitoring (B) aid operations but do not directly rebuild user confidence in outcomes. Post-incident improvements (D) are essential for long-term assurance but do not provide the immediate trust restoration that supervised, human-validated outputs deliver.

NEW QUESTION # 182

A military contractor discovered that its large language model (LLM) is at high risk of being targeted by advanced persistent threat (APT) actors seeking to exploit the model to access confidential information.

Which of the following attacks is the HIGHEST priority to protect against?

- A. Unauthorized tuning
- B. Model inversion
- C. Model distillation
- D. Data poisoning

Answer: B

Explanation:

AAISM classifies model inversion as a privacy/information-leakage threat where adversaries infer or reconstruct sensitive training data or attributes from model outputs-directly jeopardizing confidential information targeted by APTs. While data poisoning, unauthorized tuning, and model distillation present material risks (integrity, governance/IP theft), the scenario's stated objective-accessing confidential information-most directly maps to inversion. Accordingly, AAISM prioritizes defenses such as output regularization, confidence suppression/calibration, overfitting controls, privacy-preserving techniques, and strict access/telemetry on inference interfaces.

NEW QUESTION # 183

As organizations increasingly rely on vendors to develop AI systems, which of the following is the MOST effective way to monitor vendors and ensure compliance with ethical and security standards?

- A. Mandating that vendors share source code and AI documentation with the contracting party
- B. Requiring vendors to monitor their adherence to ethics and security standards
- C. Allowing vendors to self-attest ethical AI compliance and implement benchmark monitoring
- D. Conducting regular audits of vendor processes and adherence to AI development guidelines

Answer: D

Explanation:

AAISM vendor governance guidance identifies regular audits of vendor processes as the most effective method of ensuring compliance with ethical and security standards. Independent audits provide verifiable assurance that vendors are meeting agreed-upon requirements. Self-attestation, internal monitoring, or documentation sharing provide some transparency but do not guarantee compliance. The best practice, particularly for high-risk AI deployments, is independent and recurring audits of vendor processes. References:
