## 第壹部分、選擇題（占62分）

### 一、詞彙題（占10分）

說明：第1題至第10題為單選題，每題1分。

- The bus driver often complains about chewing gum found under passenger seats because it is \_\_\_\_ and very hard to remove.  
(A) sticky (B) greasy (C) clumsy (D) mighty
- Jesse is a talented model. He can easily adopt an elegant \_\_\_\_ for a camera shoot.  
(A) clap (B) toss (C) pose (D) snap
- In order to draw her family tree, Mary tried to trace her \_\_\_\_ back to their arrival in North America.  
(A) siblings (B) commuters (C) ancestors (D) instructors
- Upon the super typhoon warning, Nancy rushed to the supermarket—only to find the shelves almost \_\_\_\_ and the stock nearly gone.  
(A) blank (B) bare (C) hollow (D) queer
- Even though Jack said “Sorry!” to me in person, I did not feel any \_\_\_\_ in his apology.  
(A) liability (B) generosity (C) integrity (D) sincerity
- My grandfather has astonishing powers of \_\_\_\_\_. He can still vividly describe his first day at school as a child.  
(A) resolve (B) fraction (C) privilege (D) recall
- Recent research has found lots of evidence to \_\_\_\_ the drug company’s claims about its “miracle” tablets for curing cancer.  
(A) provoke (B) counter (C) expose (D) convert
- Corrupt officials and misguided policies have \_\_\_\_ the country’s economy and burdened its people with enormous foreign debts.  
(A) crippled (B) accelerated (C) rendered (D) ventured
- As a record number of fans showed up for the baseball final, the highways around the stadium were \_\_\_\_ with traffic all day.  
(A) choked (B) disturbed (C) enclosed (D) injected
- Studies show that the \_\_\_\_ unbiased media are in fact often deeply influenced by political ideology.  
(A) undoubtedly (B) roughly (C) understandably (D) supposedly

### 二、綜合測驗（占10分）

說明：第11題至第20題為單選題，每題1分。

P.S. Fast2test在Google Drive上分享了免費的、最新的F5CAB3考試題庫：[https://drive.google.com/open?id=1LroU-K\\_iNiZD7tAOHhVfmOQYLOWmSWB](https://drive.google.com/open?id=1LroU-K_iNiZD7tAOHhVfmOQYLOWmSWB)

Fast2test就是一個能使F5 F5CAB3認證考試的通過率提高的一個網站。Fast2test的資深IT專家在不斷研究出各種成功通過F5 F5CAB3認證考試的方案，他們的研究成果可以100%保證一次性通過F5 F5CAB3 認證考試。。Fast2test提供的培訓工具是很有趣的，有很多已經通過了一些IT認證考試的人就是用了Fast2test提供的練習題和答案，其中也有通過F5 F5CAB3認證考試，他們也是利用的Fast2test提供的便利。選擇Fast2test就選擇了成功。

使用Fast2test F5的F5CAB3考試認證培訓資料，想過F5的F5CAB3考試認證是很容易的，我們網站設計的培訓工具能幫助你第一次嘗試通過測試，你只需要下載Fast2test F5的F5CAB3考試認證培訓資料也就是試題及答案，很輕鬆很容易，包你通過考試認證，如果你還在猶豫，試一下我們的使用版本就知道效果了，不要猶豫，趕緊加入購物車，錯過了你將要遺憾一輩子的。

>> F5CAB3測試引擎 <<

## 我們提供高質量的F5CAB3測試引擎，保證妳100%通過考試

作為一位 F5CAB3 考生而言，作好充分的準備可以幫助您通過考試。Fast2test 的 F5CAB3 題庫覆蓋了最新的 F5CAB3 考試指南及考試真題題型。F5CAB3 隸屬於 F5 認證考試科目。我們的 F5CAB3 認證考題已經幫助很多考生通過考試，試題質量和考題的覆蓋率都有保證，保證考生權利不受任何損失。獲取 F5CAB3 考試認證證書可以

用來實施一些複雜多變的工程。

## F5 F5CAB3 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none"><li>Apply procedural concepts required to modify and manage pools: This domain addresses managing server pools including health monitors, load balancing methods, priority groups, and service port configurations.</li></ul>
主題 2	<ul style="list-style-type: none"><li>Apply procedural concepts required to modify and manage virtual servers: This domain covers managing virtual servers including applying persistence, encryption, and protocol profiles, identifying iApp objects, reporting iRules, and showing pool configurations.</li></ul>

## 最新的 F5-CA F5CAB3 免費考試真題 (Q82-Q87):

### 問題 #82

Users are unable to reach an application. The Virtual Server shows a red diamond status in the Configuration Utility. What is the cause?

- A. All pool members are down
- B. HTTPS traffic sent to HTTP Virtual Server
- C. All pool members are disabled
- D. Virtual Server is disabled

答案： A

### 解題說明：

A red diamond indicates the Virtual Server is enabled but unavailable due to all pool members being down.

### 問題 #83

What would be the best persistence method for F5 to load balance traffic from clients via a single source IP (NAT) to multiple pool members with even distribution for an HTTPS web application?

- A. Source address affinity persistence
- B. SSL persistence
- C. Destination address affinity persistence
- D. Cookie persistence

答案： D

### 解題說明：

When clients connect through a single source IP (NAT) - such as a corporate proxy or carrier-grade NAT

- Source Address Affinity persistence becomes entirely ineffective because all clients share an identical source IP address. This would force every client session to the same pool member, completely eliminating even distribution and defeating the purpose of load balancing.

Cookie Persistence is the optimal solution in this scenario because it operates at Layer 7, inserting a unique cookie into each client's HTTP/HTTPS response. Each individual browser session carries its own distinct cookie value, allowing the BIG-IP to identify and persist individual clients to specific pool members - regardless of whether they share a common source IP address. This guarantees both session persistence and even load distribution across pool members.

The remaining options are unsuitable because:

\* Destination Address Affinity persists based on destination IP, irrelevant for client-to-server session stickiness.

\* SSL Persistence uses the SSL Session ID for persistence, but SSL session IDs are frequently renegotiated and are unreliable for long-term persistence across modern TLS implementations.

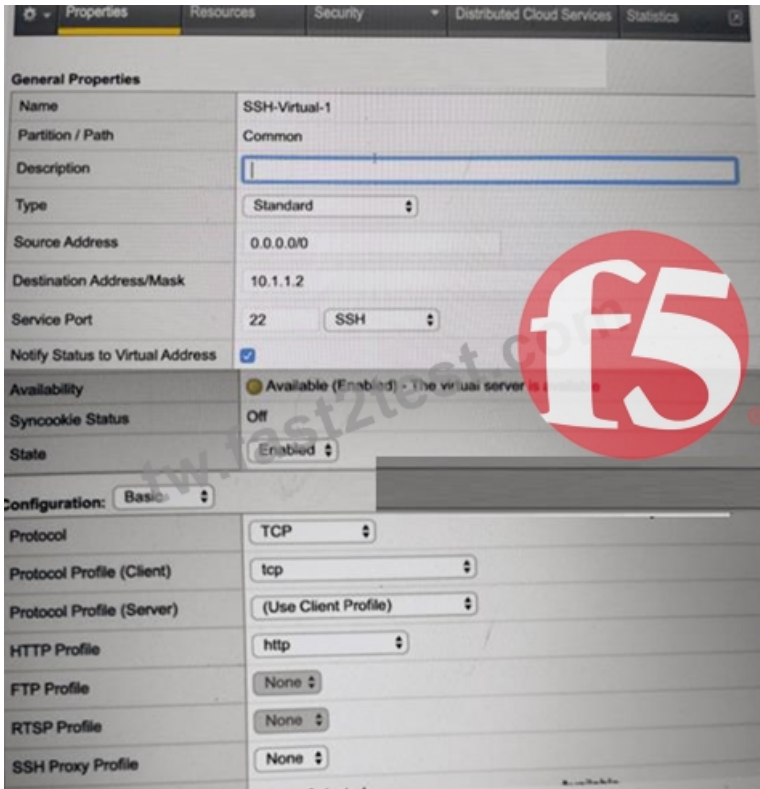

\* Source Address Affinity fails entirely under NAT conditions as described.

Cookie persistence is the industry-standard method for HTTPS application load balancing requiring per-client session affinity.

Reference: BIG-IP Administration - Data Plane Configuration, Module: Persistence Methods - Cookie, Source Address, and SSL Persistence.

### 問題 #84

Refer to the exhibit.

A BIG-IP Administrator creates a new Virtual Server to load balance SSH traffic. Users are unable to log on to the servers. What should the BIG-IP Administrator do to resolve the issue? (Choose one answer)

- A. Set HTTP Profile to None
- B. Set Destination Address/Mask to 0.0.0.0/0
- C. Set Source Address to 10.1.1.2
- D. Set Protocol to UDP

答案： A

解題說明：

SSH is a Layer 4 TCP-based protocol that operates on TCP port 22 and does not use HTTP in any capacity. In the exhibit, the Virtual Server is configured with an HTTP Profile applied, which is inappropriate for SSH traffic and causes connection failures.

According to the BIG-IP Administration: Data Plane Configuration documentation:

An HTTP profile must only be applied to Virtual Servers handling HTTP or HTTPS traffic.

When an HTTP profile is attached, BIG-IP expects HTTP headers and attempts to parse application-layer data.

Non-HTTP protocols such as SSH, FTP (control), SMTP, and other raw TCP services will fail if an HTTP profile is enabled.

Why the other options are incorrect:

A . Set Protocol to UDP

SSH uses TCP, not UDP. Changing the protocol would break SSH entirely.

B . Set Source Address to 10.1.1.2

The source address setting controls client access restrictions and is unrelated to protocol parsing issues.

C . Set Destination Address/Mask to 0.0.0.0/0

The destination address is already valid for a specific SSH service and does not impact protocol handling.

Correct Resolution:

The BIG-IP Administrator should remove the HTTP Profile (set it to None) so the Virtual Server functions as a pure Layer 4 TCP service, allowing SSH connections to pass through successfully.

### 問題 #85

A Standard Virtual Server reports poor performance for Internet users.

What TCP profile configuration should be applied?

- A. Client: f5-tcp-lan
- B. Client: f5-tcp-optimized
- C. Client: f5-tcp-wan / Server: f5-tcp-lan
- D. Client: f5-tcp-lan / Server: f5-tcp-wan

答案： C

解題說明：

WAN-optimized TCP profiles improve performance for high-latency Internet clients, while LAN profiles are optimal for backend servers.

#### 問題 #86

A BIG-IP Administrator uses backend servers to host multiple services per server. There are multiple virtual servers and pools defined, referencing the same backend servers. Which load balancing algorithm is most appropriate to have an equal number of connections on each backend server?

- A. Least Connections (node)
- B. Predictive (node)
- C. Predictive (member)
- D. Least Connections (member)

答案： A

解題說明：

This question addresses the critical architectural distinction between "member-based" and "node-based" load balancing in environments where servers are multi-homed or host multiple virtualized services. On a BIG-IP, a node represents the underlying IP address of a physical or virtual server, while a pool member represents a specific combination of that IP and a service port (e.g., 10.1.1.10:80).

When multiple pools reference the same IP address across different ports or Virtual Servers, using Least Connections (member) (Option D) only balances connections relative to that specific pool. For example, if Pool\_A and Pool\_B both use Server\_X, and Pool\_A has 100 connections while Pool\_B has only 5, a member-based algorithm for Pool\_B only sees the 5 connections and may continue to send traffic there even if Server\_X is CPU-saturated by Pool\_A.

The Least Connections (node) algorithm (Option B) solves this by tracking the aggregate total of all active connections directed to that specific node (IP address) across every pool on the system. By selecting the node with the absolute lowest total connection count, the BIG-IP ensures a more equitable distribution of work at the hardware resource level. Predictive methods (Options A and C) use a ranking system based on the trend of connection counts over time, but for the specific requirement of maintaining an equal number of current connections on multi-service servers, the direct Least Connections (node) calculation is the standard and most effective procedural choice.

#### 問題 #87
