The certification of Salesforce PDII exam is what IT people want to get. Because it relates to their future fate. Salesforce PDII exam training materials are the learning materials that each candidate must have. With this materials, the candidates will have the confidence to take the exam. Training materials in the Prep4SureReview are the best training materials for the candidates. With Prep4SureReview's Salesforce PDII Exam Training materials, you will pass the exam easily.

To prepare for the Salesforce PDII certification exam, candidates can attend Salesforce training classes, review the official Salesforce documentation, and take practice exams. It is also recommended that candidates gain hands-on experience in developing custom applications on the Salesforce platform to build their skills and knowledge.

To be eligible to take the PDII exam, candidates must have already passed the PDI certification exam and have experience in developing custom applications on the Salesforce platform. The PDII exam is a proctored, multiple-choice exam that lasts for two hours and consists of 60 questions. PDII Exam covers a wide range of topics, including Apex and Visualforce development, data modeling and management, integration, testing, and deployment.

Salesforce Certified Platform Developer II (PDII) exam is an advanced certification intended for experienced developers who are looking to demonstrate their expertise in developing custom applications on the Salesforce platform. Platform Developer II certification is designed to test a developer's knowledge and skills in designing and implementing complex business logic, data models, and security mechanisms using Apex programming language and other Salesforce development tools.

After you use our PDII Exam Materials, you will more agree with this. With the help of our PDII study guide, nothing is impossible to you.

Salesforce Platform Developer II Sample Questions (Q126-Q131):

NEW QUESTION # 126

Which technique can run custom logic when a Lightning web component is loaded?

- A. Use the `connectedCallback ()` method.
- B. Use the `renderedCallback ()` method.
- C. Use an aura:handler "init" event to call a function.
- D. Call `SA.enqueueAction` passing in the method to call.

Answer: C

NEW QUESTION # 127

Universal Containers is implementing a new approval process for expense reimbursements. The process requires complex logic to determine the appropriate approver based on factors such as expense amount, employee role, and project type. The solution should allow for flexibility and future changes in the approval rules.

Which approach would be the most suitable for implementing this logic?

- A. Implement a custom formula field to calculate and determine the appropriate approver based on the given criteria.
- B. Use the Salesforce Approval Process feature and define multiple approval steps with entry criteria and approval assignments.
- C. Create a custom Apex class with a method to determine the appropriate approver based on the given criteria.
- D. Develop a custom Lightning component to handle the approval logic and integrate it into the expense reimbursement record page.

Answer: D

Explanation:

The most suitable approach for implementing this logic is to develop a custom Lightning component to handle the approval logic and integrate it into the expense reimbursement record page. A Lightning component is a reusable unit of an app that can include markup, JavaScript, CSS, and Apex. A Lightning component can use the Lightning Data Service or Apex to query data from Salesforce and display it on a Lightning page. A Lightning component can also use custom logic to determine the appropriate approver based on factors such as expense amount, employee role, and project type. By developing a custom Lightning component, the developer can create a custom UI element that can handle the approval logic and integrate it into the expense reimbursement record page. This way, the developer can leverage the Lightning framework and the Lightning Data Service or Apex to create a flexible and future-proof solution that meets the requirement. NEW QUESTION # 128

What is the recommended approach to create test data when testing Apex that involves Pricebooks, PricebookEntries, and Products?

- A. Insert a new standard Pricebook record within your Test Method so that it can be used with other test records.
- B. Use the `Test.getStandardPricebookId()` method to get the Id of the standard Pricebook so that it can be used with other test records.
- C. Use the `isTest (SeeAllData=true)` annotation on the entire Test Class to allow your Test Methods access to the standard Pricebook.
- D. Use the `isTest (SeeAllData=true)` annotation on Test Methods that require access to the standard Pricebook.

Answer: B

NEW QUESTION # 129

An environment has two Apex triggers: an after-update trigger on Account and an after-update trigger on Contact. The Account after-update trigger fires whenever an Account's address is updated, and it updates every associated Contact with that address. The Contact after-update trigger fires on every edit, and it updates every Campaign Member record related to the Contact with the Contact's state.

Consider the following: A mass update of 200 Account records' addresses, where each Account has 50 Contacts. Each Contact has one Campaign Member. This means there are 10,000 Contact records across the Accounts and 10,000 Campaign Member records across the contacts.

What will happen when the mass update occurs?

- A. The mass update will fail, since the two triggers fire in the same context, thus exceeding the number of records processed by DML statements.
- **B. There will be no error, since each trigger fires within its own context and each trigger does not exceed the limit of the number of records processed by DML statements.**
- C. The mass update of Account address will succeed, but the Contact address updates will fail due to exceeding number of records processed by DML statements.
- D. There will be no error and all updates will succeed, since the limit on the number of records processed by DML statements was not exceeded.

Answer: B

NEW QUESTION # 130

Universal Containers has a Visualforce page that displays a table every Container_c being rented by a given Account. The page is failing because some of the customers rent over 100,000 containers.

What should a developer change about the Visualforce page to help with the page load errors?

- A. Implement pagination with a StandardSetController.
- B. Use lazy loading and a transient List variable.
- C. Use JavaScript remoting with SOQL Offset.
- **D. Implement pagination with an OffsetController.**

Answer: D

NEW QUESTION # 131

.....

It is impossible to overstate the significance of valid PDII exam questions. The latest and actual PDII exam questions are essential to clear the PDII exam in one go. Applicants are better prepared to succeed when they prepare with the updated Salesforce PDII Questions. These PDII exam questions give applicants the knowledge they need to quickly ace the PDII examination.
