Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q183-Q188):

NEW QUESTION # 183

Which two are configured in the DMARC verification profile? (Choose two.)

- A. message action into an incoming or outgoing content filter
- B. minimum number of signatures to verify
- C. message action to take when the policy is reject/quarantine
- D. name of the verification profile
- E. ESA listeners to use the verification profile

Answer: C,D

NEW QUESTION # 184

What is a capability of content filters?

- A. to scan incoming or outgoing messages
- B. to perform antispam scanning
- C. to review messages based on email subject
- D. to apply rules before message filters

Answer: C

NEW QUESTION # 185

When email authentication is configured on Cisco ESA, which two key types should be selected on the signing profile? (Choose two.)

- A. Private Keys
- B. Domain Keys
- C. DKIM
- D. Symmetric Keys
- E. Public Keys

Answer: A,E

Explanation:

With DomainKeys or DKIM email authentication, the sender signs the email using public key cryptography. Configuring DomainKeys and DKIM Signing A signing key is the private key stored on the appliance.

NEW QUESTION # 187

A list of company executives is routinely being spoofed, which puts the company at risk of malicious email attacks. An administrator must ensure that executive messages are originating from legitimate sending addresses. Which two steps must be taken to accomplish this task? (Choose two.)

- **A. Create an incoming content filter with the Forged Email Detection condition**
- B. Enable the Forged Email Detection feature under Security Settings.
- C. Create an incoming content filter with SPF detection.
- D. Enable DMARC feature under Mail Policies.
- **E. Create a content dictionary including a list of the names that are being spoofed.**

Answer: A,E

Explanation:

To ensure that executive messages are originating from legitimate sending addresses, the administrator must take two steps:

* Create an incoming content filter with the Forged Email Detection condition. This will allow the administrator to detect and block messages that have a forged "From header" that matches or is similar to any of the names in a content dictionary.

* Create a content dictionary including a list of the names that are being spoofed. This will allow the administrator to specify the names of the executives that are being targeted by spoofing attacks and use them in the Forged Email Detection condition. The other options are not relevant or sufficient for this task. References: [Cisco Secure Email Gateway Administrator Guide - Forged Email Detection] and
