NEW QUESTION # 861

Which statement correctly compares traditional networks and controller-based networks?

- A. Only traditional networks natively support centralized management
- **B. Only controller-based networks decouple the control plane and the data plane**
- C. Traditional and controller-based networks abstract policies from device configurations
- D. Only traditional networks offer a centralized control plane

Answer: B

Explanation:

Most traditional devices use a distributed architecture, in which each control plane is resided in a networking device. Therefore they need to communicate with each other via messages to work correctly. In contrast to distributed architecture, centralized (or controller-based) architectures centralizes the control of networking devices into one device, called SDN controller
