Huawei HCIP-WLAN V2.0 Sample Questions (Q393-Q398):

NEW QUESTION # 393

In WLAN networks, the Wi-Fi 6 standard has the advantages of large bandwidth, high concurrency, low latency, and low power consumption.

Which of the following technologies does Wi-Fi 6 use to reduce latency?

- A. OFDMA technology
- B. TWT technology
- C. 8x8 MIMO spatial stream
- D. BSS Color Technology

Answer: A

NEW QUESTION # 394

On a network where Huawei's CloudCampus Solution is deployed, all APs are managed by iMaster NCE-Campus. Users encounter STA roaming failures and a deteriorating WLAN service experience. Which of the following are the possible causes of STA roaming failures in cloud AP scenarios? (Choose all that apply.)

- A. Cloud APs are deployed at different sites.
- B. No mobility group is established between cloud APs.
- C. Cloud APs have gone online in NAT mode.
- D. Inter-AP roaming is disabled on iMaster NCE-Campus.

Answer: A,B,C

Explanation:

STA roaming in CloudCampus relies on proper mobility domain configuration and Layer 3 reachability between APs. If APs are deployed at different sites or operate in NAT mode, roaming context sharing is impacted. Without a mobility group, APs cannot exchange user context, leading to roaming failures.

NEW QUESTION # 395

During the on-site survey phase of WLAN network planning, engineers need to verify the information obtained during the requirements collection phase on site and also collect information on whether there are other interference sources. Which of the following interference sources need to be additionally marked and recorded on the drawings? (Multiple choice)

- A. Load-bearing columns
- B. Mobile hotspot
- C. Microwave oven
- D. Bluetooth

Answer: B,C,D

NEW QUESTION # 396

Similar to broadcast packets, multicast packets are sent at a low rate on a WLAN. It is recommended that multicast packet suppression be enabled when no multicast service is running, ensuring wireless network resources are fully leveraged.

- A. False
- B. True

Answer: B

Explanation:

Multicast packets are transmitted at low rates, consuming more airtime, so suppressing them when not needed helps improve overall WLAN efficiency.

NEW QUESTION # 397

In WLAN network planning, signal coverage design is used to ensure that the signal strength within the coverage area of each area can meet user needs while solving interference problems between adjacent APs.

So according to the signal coverage design principles, engineers should consider the following when designing signal coverage? (Multiple choice)

- A. Single AP coverage
- B. AP deployment location
- C. AP power supply mode
- D. Signal attenuation due to obstacles

Answer: A,B,D
