Which of the following attacks did the security administrator most likely see?

- A. Brute force
- B. Privilege escalation
- C. Directory traversal
- D. Credential replay

Answer: C

NEW QUESTION # 332
The security operations center is researching an event concerning a suspicious IP address A security analyst looks at the following event logs and discovers that a significant portion of the user accounts have experienced faded log-In attempts when authenticating from the same IP address:
Which of the following most likely describes attack that took place?

- A. Rainbow table
- B. Brute-force
- C. Dictionary
- D. Spraying

Answer: D

Explanation:
Password spraying is a type of attack where an attacker tries a small number of commonly used passwords across a large number of accounts. The event logs showing failed login attempts for many user accounts from the same IP address are indicative of a password spraying attack, where the attacker is attempting to gain access by guessing common passwords.
