NEW QUESTION # 95
In the WAN BGP protocol, which of the following neighbor types "requires manual configuration of neighbor IP addresses and cannot be automatically discovered"?

- A. BGP neighboring countries
- B. BGP route reflector client neighbor
- C. IBGP Neighbors
- D. EBGP Neighbors

Answer: D

NEW QUESTION # 96

(Refer to the following route queried using a command on the VTEP. Which of the following statements about the route are true?)

- A. The VPN instance whose IRT is 0:2 or 0:3 can learn the host route information contained in the route.
- B. This is an IRB Type 2 route.
- C. This route contains the RT and EVPN Router's MAC Extended Community attribute.
- D. This is an ARP Type 2 route.

Answer: A,B,C

Explanation:
The command output shows an EVPN Route Type 2 (MAC Advertisement Route), which is used in VXLAN BGP EVPN fabrics to advertise host reachability information. The route clearly carries both a MAC address (b0d5-9dc7-3c41/48) and a host IP address (172.16.1.173/32). In HCIP Datacom Campus Network VXLAN design, when a Type 2 route includes both MAC and IP information, it is classified as an IRB (Integrated Routing and Bridging) Type 2 route, enabling distributed gateways to perform Layer 2 forwarding and Layer
3 routing based on the same control-plane information. Therefore, statement A is correct.
Statement B is incorrect because ARP-related learning is not represented as a separate "ARP Type 2" EVPN route. EVPN uses MAC/IP Advertisement routes to distribute host reachability, not ARP-only route types.
Statement C is correct. The route contains Route Target extended communities RT 0:2 and RT 0:3, which control EVPN route import. Any VPN instance configured with an import RT of 0:2 or 0:3 can successfully import this route and learn the corresponding host MAC and IP information.
Statement D is also correct. The output explicitly shows RT extended communities and the EVPN Router's MAC extended community. These attributes are essential for VXLAN tunnel identification, split-horizon forwarding, and correct EVPN operation in a campus fabric.
Hence, the correct answers are A, C, and D.

NEW QUESTION # 97

In an MPLS VPN network, when a PE device forwards VPN packets to a P device, if the PE device does not encapsulate a public network label, which of the following problems will occur?

- A. Data packets are forwarded normally to the target PE device without affecting services.
- B. The P device cannot identify the packet forwarding path and discards the packet.
- C. The PE device automatically re-encapsulates the public network label before forwarding.
- D. The CE device cannot receive data packets (VPN label missing).

Answer: B

NEW QUESTION # 98

In the WAN BGP protocol, which of the following loop prevention mechanisms can "reject routes containing local AS numbers by checking the AS paths traversed by the route"?

- **A. AS_PATH anti-loop**
- B. BGP MED attributes
- C. BGP Local Preferences property
- D. IBGP horizontal segmentation

Answer: A

NEW QUESTION # 99

In Huawei's WAN solution, for "backup data transmitted across regions (such as full database backup)," which of the following technologies can "enable breakpoint resumption of backup data transmission and avoid retransmission after interruption"?

- **A. File block-based breakpoint resumption technology (records transmitted blocks and resumes from the breakpoint after interruption).**
- B. Backup data is transferred completely in one go; if interrupted, it must be restarted.
- C. Reduce backup data transfer rate to decrease the probability of interruption.
- D. Transmit only during off-peak hours at night to avoid interruptions during peak business periods.

Answer: A
