So our CSA practice materials are the clear performance and manifestation of our sincerity. You really should have a try on our CSA exam dumps!

ServiceNow CSA (ServiceNow Certified System Administrator) Exam is a certification that validates the skills and knowledge of ServiceNow System Administrators. CSA exam is designed to test the ability of individuals to configure and manage ServiceNow instances, troubleshoot and resolve issues, and perform system administration tasks. ServiceNow Certified System Administrator certification is recognized globally and is a valuable asset for professionals seeking to advance their career in the field of ServiceNow.

ServiceNow Certified System Administrator Sample Questions (Q469-Q474):

NEW QUESTION # 469

What are examples of Core tables in the ServiceNow platform?

- A. Configuration, Connect, Chat
- B. Team, Party, Awards
- C. Work, Caller, Timecard
- **D. User, Task, Incident**

Answer: D

Explanation:

In ServiceNow, Core Tables are foundational tables that are included by default in the platform. These tables store essential records used across various applications and modules.

#Key Core Tables in ServiceNow:

Task (task)- A core table that serves as the parent for several other tables, such as Incident, Change, and Problem.

User (sys_user)- Stores all user records in the instance.

Incident (incident)- A child table of task, used to track issues and requests reported by users.

#Why Option C is Correct?

User (sys_user)- Essential for user management in ServiceNow.

Task (task)- A fundamental table that many other tables extend from.

Incident (incident)- A widely used table in IT Service Management (ITSM), which extends from task.

#Incorrect Options Explained:

A: Configuration, Connect, Chat- Configuration is broad and does not refer to a single table, and Connect and Chat are part of ServiceNow's communication framework but are not core tables.

B: Team, Party, Awards- These tables do not exist in ServiceNow's core platform.

D: Work, Caller, Timecard- While Caller may refer to users, and Timecard is a table used in time-tracking applications, these are not considered core tables.

NEW QUESTION # 470

What section on a task record is used to see the most recent updates made to a record?

- A. Timeline
- B. Audit Log
- C. Related List
- **D. Activity Stream**

Answer: D

Explanation:

In ServiceNow, the Activity Stream section on a task record displays the most recent updates made to that record. It logs changes in fields, comments, work notes, and system updates in real time.

Displays a chronological history of changes

Shows who made the update, when it was made, and what changed.

Includes comments, work notes, system-generated updates, and field value changes.

Real-time updates for collaboration

If multiple users are working on the same record, they can see updates in real-time.

Useful for ITSM workflows (Incidents, Change Requests, Tasks).

Integrated with Comments and Work Notes

Users can add comments (visible to users) or work notes (internal notes) directly in the Activity Stream.

Why is "Activity Stream" the Correct Answer?

Example View of Activity Stream in a Task Record: Timestamp

User

Action

10:15 AM

John Doe

Updated Priority from "Low" to "High"

10:20 AM

Jane Smith

Added a work note: "Waiting for user confirmation"

10:30 AM

System

State changed from "New" to "In Progress"

A: Related List Incorrect- Related Lists show linked records (e.g., affected CIs, approvals, attachments) but not recent updates.

C: Audit Log Incorrect- The Audit Log (sys_history_line table) tracks database-level changes but is not displayed as an Activity Stream on a task record.

D: Timeline Incorrect- No standard "Timeline" section exists in ServiceNow task records.

Incorrect Answer Choices Analysis:

NEW QUESTION # 471

When creating application tables, a user role is automatically added to the table record. Which other role does an application typically have?

- A. Application Super User
- B. Application Manager
- C. Application Fulfiller
- **D. Application Admin**

Answer: D

NEW QUESTION # 472

Access Control rules are applied to a specific table, like the Incident table. What is the object name for a rule that is specific to the Incident table and the Major Incident field?

- A. Incident.Major_Incident
- B. incident<=>major_incident
- C. incident=>major_incident
- **D. incident.major_incident**
- E. incident||major_incident

Answer: D

Explanation:

NEW QUESTION # 473

What is the purpose of the Event Registry?

- A. The Event Registry is a list of all Events that originate through an integration
- **B. The Event Registry lists all Events that have successfully completed within a 24-hour period**
- C. The Event Registry is a list of all Events that have successfully completed after being Invoked by a script
- D. The Event Registry is a module that provides Event definitions

Answer: B
