

Top SC-401 Exam Dumps & Exam SC-401 Preparation

What's more, part of that Itcertmaster SC-401 dumps now are free: <https://drive.google.com/open?id=1SQaj95HeMMA09nrOIXUKwZVTyRasIXbn>

The update for our SC-401 learning guide will be free for one year and half price concession will be offered one year later. In addition to the constantly update, we have been working hard to improve the quality of our SC-401 Preparation prep. I believe that with the help of our study materials, the exam is no longer an annoyance. Hope you can give not only our SC-401 training materials but also yourself a chance.

Microsoft SC-401 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.
Topic 2	<ul style="list-style-type: none"> • Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.
Topic 3	<ul style="list-style-type: none"> • Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.

Topic 4	<ul style="list-style-type: none"> • Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.

Exam SC-401 Preparation | Valid Test SC-401 Tips

The passing rate of our SC-401 study materials is the issue the client mostly care about and we can promise to the client that the passing rate of our product is 99% and the hit rate is also high. Our study materials are selected strictly based on the real SC-401 exam and refer to the exam papers in the past years. Our expert team devotes a lot of efforts on them. We also update frequently to guarantee that the client can get more learning SC-401 resources and follow the trend of the times. So if you use our SC-401 study materials you will pass the SC-401 test with high success probability.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q145-Q150):

NEW QUESTION # 145

You have a Microsoft 365 E5 tenant.

You have sensitivity labels as shown in the Sensitivity Labels exhibit. (Click the Sensitivity Labels tab.)

Name	Order	Scope
Public	0 - lowest	File, Email
General	1	File, Email
Confidential	2	File, Email
Internal	3	File, Email
External	4 - highest	File, Email

The Confidential/External sensitivity label is configured to encrypt files and emails when applied to content.

The sensitivity labels are published as shown in the Published exhibit. (Click the Published tab.)

Sensitivity Policy1 Microsoft

Edit policy

Delete policy

Name

Sensitivity Policy1

Description

Published labels

Public
General
Confidential
Confidential/Internal
Confidential/External

Published to

All

Policy settings

Users must provide justification to remove a label or lower its classification

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
The Internal sensitivity label inherits all the settings from the Confidential label.	<input type="radio"/>	<input type="radio"/>
Users must provide justification if they change the label of content from Confidential/Internal to Confidential/External.	<input type="radio"/>	<input type="radio"/>
Content that has the Confidential/External label applied will retain the encryption settings if the sensitivity label is removed from the label policy.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area

Statements	Yes	No
The Internal sensitivity label inherits all the settings from the Confidential label.	<input type="radio"/>	<input checked="" type="radio"/>
Users must provide justification if they change the label of content from Confidential/Internal to Confidential/External.	<input type="radio"/>	<input checked="" type="radio"/>
Content that has the Confidential/External label applied will retain the encryption settings if the sensitivity label is removed from the label policy.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Answer Area

Statements

Yes No

The Internal sensitivity label inherits all the settings from the Confidential label. Yes No

Users must provide justification if they change the label of content from Confidential/Internal to Confidential/External. Yes No

Content that has the Confidential/External label applied will retain the encryption settings if the sensitivity label is removed from the label policy. Yes No

Step 1 - Review what's configured

Labels: Public, General, Confidential, Internal, External.

Also shown in policy: Confidential/Internal and Confidential/External.

Policy setting: Users must provide justification to remove a label or lower its classification.

Confidential/External # encrypts content when applied.

Step 2 - Analyze each statement

Statement 1: The Internal sensitivity label inherits all the settings from the Confidential label.

Sub-labels (e.g., Confidential/Internal, Confidential/External) do not inherit settings from the parent.

They are independent labels grouped under a parent for organization, but each sub-label must have its own protection settings defined.

Answer: No

Statement 2: Users must provide justification if they change the label of content from Confidential/Internal to Confidential/External.

The policy requires justification only when removing a label or downgrading classification (lowering).

Changing between two sub-labels of the same parent (Confidential/Internal # Confidential/External) is considered a lateral move (not a downgrade).

Answer: No

Statement 3: Content that has the Confidential/External label applied will retain the encryption settings if the sensitivity label is removed from the label policy.

If a label is removed from a published policy, content already labeled retains its protection settings (such as encryption).

The label metadata stays applied to the file/email, even if unpublished.

Answer: Yes

Reference: What happens when you delete or edit a sensitivity label

NEW QUESTION # 146

You have a Microsoft 365 E5 subscription that uses Microsoft Purview.

You are creating an exact data match (EDM) classifier named EDM1.

For EDM1, you upload a schema file that contains the fields shown in the following table.

Column name	Match mode
PP	EU Passport Number
Name	All Full Names
DateOfBirth	Single-token
AccountNumber	Multi-token

What is the maximum number of primary elements that EDM1 can have?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

In Microsoft Purview Exact Data Match (EDM) classifiers, a primary element is a unique, identifying field used for data matching. EDM allows up to two primary elements per schema.

From the provided table, the Match mode indicates how data is analyzed:

*PP (EU Passport Number) → Likely a primary element because it's unique.

*Name (All Full Names) → Typically not a primary element as names are common.

*DateOfBirth (Single-token) → Usually a secondary element, not unique.

*AccountNumber (Multi-token) → Can be a primary element, as it's a unique identifier.

*Since EDM supports a maximum of two primary elements, the correct answer is 2.

NEW QUESTION # 147

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You implement Microsoft 365 Endpoint data loss prevention (Endpoint DLP).

You have computers that run Windows 11 and have Microsoft 365 Apps installed. The computers are joined to a Microsoft Entra tenant.

You need to ensure that Endpoint DLP policies can protect content on the computers.

Solution: You enroll the computer in Microsoft Intune.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Correct:

* You deploy the Endpoint DLP configuration package to the computers.

* You onboard the computers to Microsoft Defender for Endpoint.

Incorrect:

* You deploy the unified labeling client to the computers.

* You enroll the computers in Microsoft Intune.

* You deploy the Microsoft Purview Information Protection client to the computers.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/endpoint-dlp-getting-started>

<https://docs.microsoft.com/en-us/microsoft-365/security/defender-endpoint/configure-endpoints>

NEW QUESTION # 148

You have a Microsoft 365 tenant.

You have a database that stores customer details. Each customer has a unique 13-digit identifier that consists of a fixed pattern of numbers and letters.

You need to implement a data loss prevention (DLP) solution that meets the following requirements:

*Email messages that contain a single customer identifier can be sent outside your company.

*Email messages that contain two or more customer identifiers must be approved by the company's data privacy team.

Which two components should you include in the solution? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a DLP policy
- B. a sensitive information type
- C. a sensitivity label
- D. a mail flow rule
- E. a retention label

Answer: A,B

Explanation:

You need to define a custom sensitive information type that recognizes the unique 13-digit identifier format for customer records. Microsoft Purview DLP policies use these types to identify and protect sensitive data.

A Data Loss Prevention (DLP) policy is required to enforce the rules. It will allow emails with a single identifier but trigger an approval workflow when two or more identifiers are detected.

NEW QUESTION # 149

You have a Microsoft 365 E5 subscription that contains three users named User1, User2, and User3 and a file named File1.docx. You create a sensitivity label named Label1 as shown in the following exhibit.

Assign permissions to specific users and groups * ⓘ

Assign permissions

3 items

Users and groups	Permissions	Edit	Delete
User1@86s40q.onmicrosoft.com	Co-Author		
User2@86s40q.onmicrosoft.com	Review		
User3@86s40q.onmicrosoft.com	Viewer		

Use dynamic watermarking ⓘ

Use Double Key Encryption ⓘ

You apply Label1 to File1.

For which users can Microsoft 365 Copilot summarize File1?

- A. User1 only
- B. No user
- C. User1 and User2 only
- D. User1, User2, and User3

Answer: A

Explanation:

When the sensitivity label applies encryption, the user must have the EXTRACT and VIEW usage rights for Copilot to summarize the data.

User1 - Yes

User1 is Co-Author.

Microsoft 365 co-authors typically have both view and extract permissions when working on documents collaboratively. Co-authors can view and edit the document, and also copy and extract content from it, depending on the specific permissions granted.

User2 - No

A "Reviewer" role generally has view permissions, but not necessarily extract permissions.

Reviewers can typically view the content of documents, files, or other resources, and often can add comments or make tracked changes (depending on the specific implementation and settings). However, they may not have the ability to download or export the content, unless explicitly granted those rights.

User3 - No

User3 has only view permission, not extract permissions.

Note:

If a user is the owner of a sensitivity label and that label is applied to a file, Microsoft 365 Copilot can summarize the file for that user, provided the user also has the necessary usage rights, specifically EXTRACT and VIEW, granted by the sensitivity label, according to Microsoft Learn. If the label includes encryption, these usage rights become crucial for Copilot's ability to access and summarize the content.

NEW QUESTION # 150

.....

Our SC-401 test materials boost three versions and they include the PDF version, PC version and the APP online version. The clients can use any electronic equipment on it. If only the users' equipment can link with the internet they can use their equipment to learn our SC-401 qualification test guide. They can use their cellphones, laptops and tablet computers to learn our SC-401 Study Materials. The language is also refined to simplify the large amount of information. So the learners have no obstacles to learn our SC-401 certification guide.
