

# Guidewire InsuranceSuite-Analyst Exam Dumps Provider, InsuranceSuite-Analyst New Exam Bootcamp

## Guidewire Insurance Suite Fundamentals 10.0 Exam 2023-2024

What are the three tiers in GW application architecture - ANSWER Data, application, presentation (or user interface/web clients)

In which tier are the following used? PCF Files, Gosu, and Data model entities? - ANSWER Presentation, application, and data respectively

For each of the following, identify if it is stored as a database table, as a table column, or not stored in the database at all:

- a) An entity (such as ABContact)
- b) A physical data field (such as ABContact.CreateTime)
- c) A virtual data field (such as ABContact.FullName)
- d) A foreign key field (such as ABContact.AssignedUser) - ANSWER a) table  
b) column  
c) not stored  
d) column (foreign key column)

For each of the following, identify if it is stored as a database table, as a table column, or not stored in the database at all:

- a) an array key field (such as ABContact.Contact Notes)
- b) a typelist (such as VendorType)
- c) a typekey Field (such as ABContact.VendorType) - ANSWER a) not stored in the database  
b) table  
c) column (foreign key column)

Name two circumstances in which you would execute the gwb genDataDictionary command. - ANSWER When you install app and when you extend Data Model (and are concerned with data model validation beyond schema validation in Entity Editor). If you modify system permissions or some other aspect of access and would need to regenerate the Security Dictionary.

The research and production of our InsuranceSuite-Analyst study materials are undertaken by our first-tier expert team. The clients can have a free download and tryout of our InsuranceSuite-Analyst study materials before they decide to buy our products. They can use our products immediately after they pay for the InsuranceSuite-Analyst study materials successfully. If the clients are unlucky to fail in the test we will refund them as quickly as we can. There are so many advantages of our products that we can't summarize them with several simple words. You'd better look at the introduction of our InsuranceSuite-Analyst Study Materials in detail as follow by yourselves.

With the improvement of people's living standards, there are more and more highly educated people. To defeat other people in the more and more fierce competition, one must demonstrate his extraordinary strength. Today, getting InsuranceSuite-Analyst certification has become a trend, and InsuranceSuite-Analyst exam dump is the best weapon to help you pass certification. We all know that obtaining the InsuranceSuite-Analyst certification is very difficult, and students who want to pass the exam often have to spend a lot of time and energy. After years of hard work, the experts finally developed a set of perfect learning materials InsuranceSuite-Analyst practice materials that would allow the students to pass the exam easily. With our study materials, you only need 20-30 hours of study to successfully pass the exam and reach the peak of your career. What are you waiting for? Come and buy it now.

**InsuranceSuite-Analyst New Exam Bootcamp & InsuranceSuite-Analyst  
Latest Exam Online**

This format of our InsuranceSuite-Analyst product is easiest to use due to its compatibility with web-browsers. This handy feature makes it your go-to online platform to evaluate your preparation. Conceptual and tough InsuranceSuite-Analyst questions will prompt on your screen which will test your true concepts. Guidewire Certification Exams Questions taken from past papers will also be given to give you a brief idea of the actual difficulty level of the Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam (InsuranceSuite-Analyst) exam. Its large question bank prepares you to ace your exam with ease and it will also help you to pinpoint your mistakes and weaknesses and work on them.

## Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q30-Q35):

### NEW QUESTION # 30

\_\_\_\_\_ provide starting points for solutions that can be customized and added to the Guidewire products.

- **A. Accelerators**
- B. Extension Packs
- C. Product Documentation
- D. User Story Cards

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation:

Accelerators (Option D) are the correct Guidewire term for pre-built solutions provided by Guidewire or its partners (available on the Guidewire Marketplace).

\* Definition: An Accelerator is a software asset that provides a "starting point" for a specific business problem or integration (e.g., a "London Market Accelerator" or a specific "Payment Gateway Accelerator").

\* Purpose: They are designed to be customized. Unlike the core product (which you configure) or a SaaS service (which you consume), an accelerator is often code or configuration that you download, install, and then modify to fit your specific project needs. They are not "plug-and-play" in the strictest sense; they accelerate the development by providing the foundational code.

Why other options are incorrect:

\* B. Extension Packs: While similar, "Extension Packs" (now often referred to as simply Extensions or Standards-based templates) typically refer to smaller, verified add-ons that might not require as much

"customization" as an accelerator. However, "starting point for solutions" is the textbook definition for Accelerators.

\* A. User Story Cards: These are documentation artifacts, not software solutions.

### NEW QUESTION # 31

According to SurePath Best Practices, which of these are key activities in the Inception Phase of the project? (Select two)

- **A. Benefit-mapping Workshop**
- B. Foundational Configuration
- C. Elaborate Requirements
- D. Build Solutions
- **E. Estimate the Backlog**

**Answer: A,E**

Explanation:

Comprehensive and Detailed Explanation (250-300 words):

The Inception Phase in Guidewire SurePath focuses on alignment, planning, and validation rather than building solutions.

A Benefit-mapping workshop (Option B) is used to align business objectives with expected outcomes and prioritize value delivery. Estimating the backlog (Option D) is another key activity, helping teams understand scope, effort, and feasibility early in the project.

Foundational configuration and solution building occur later, while requirement elaboration spans inception and iteration phases but is not the primary inception activity.

### NEW QUESTION # 32

What are the likely impacts of unvalidated assumptions in the requirements-gathering process?

- A. Increased developer unit test defects
- B. Higher sprint velocity
- C. Increased unplanned downstream impacts
- D. Longer code reviews
- E. Requirements in conflict

**Answer: C,E**

Explanation:

In Guidewire InsuranceSuite implementations, validating assumptions during requirements gathering is essential to delivering predictable outcomes and business value. Unvalidated assumptions often occur when analysts or stakeholders presume system behavior, business rules, or data availability without confirmation through elaboration, demonstrations, or stakeholder review. Two of the most common impacts of unvalidated assumptions are requirements in conflict and increased unplanned downstream impacts, making Options B and D the correct answers.

When assumptions are not validated, different stakeholders may interpret requirements differently. This frequently leads to conflicting requirements, such as incompatible workflows, contradictory business rules, or mismatched expectations across teams. These conflicts often surface later during development or testing, when changes are more costly to resolve.

Unvalidated assumptions also lead to unplanned downstream impacts. For example, an assumption about product behavior may later require changes to integrations, data models, or reporting. In Guidewire projects, such late discoveries can impact multiple components—rules, PCF, product model, and integrations—causing schedule delays and rework.

The remaining options are less directly related. Longer code reviews (Option A) and increased unit test defects (Option C) may occur indirectly but are not the primary or most likely impacts. Higher sprint velocity (Option E) is the opposite of what typically happens; velocity usually decreases due to rework and scope churn.

Validating assumptions early through elaboration, story huddles, and product demonstrations is a key Guidewire Analyst responsibility to minimize risk and protect delivery timelines.

### NEW QUESTION # 33

Success factors for a cross-functional team are: (Choose two)

- A. Collaboration software
- B. Active business involvement
- C. Weekly status reports
- D. Empowered decision making

**Answer: B,D**

Explanation:

Cross-functional teams are central to successful Guidewire implementations, bringing together business, technical, and quality perspectives. Two of the most critical success factors are active business involvement and empowered decision making, making Options A and D correct.

Active business involvement (Option A) ensures that requirements, priorities, and decisions remain aligned with real business needs. When business stakeholders are consistently engaged, teams can quickly validate assumptions, clarify requirements, and make informed trade-offs during elaboration and development.

Empowered decision making (Option D) allows the team to move efficiently without excessive escalation.

When the team is trusted to make decisions within defined boundaries, delivery becomes faster and more predictable. This empowerment is a cornerstone of Agile and Guidewire SurePath practices.

The remaining options are supportive but not core success factors. Collaboration software (Option B) is a tool, not a driver of success. Weekly status reports (Option C) support communication but do not directly enable effective cross-functional collaboration.

### NEW QUESTION # 34

During the Inception phase for a new marine insurance product, an elaboration session is being held.

What are two key responsibilities of participants in these sessions to help achieve the objectives of the workshop?

- A. Focusing on the happy path of the requirement first, then edge cases
- B. Reviewing the standard process flows and how they tie back to Guidewire product functionality
- C. Creating detailed UI mockups for all base system screens
- D. Writing Gosu code to implement complex business logic
- E. Performing end-to-end regression testing of the configured solution

- F. Formalizing the sprint backlog with tasks assigned to individual developers

**Answer: A,B**

Explanation:

Elaboration sessions conducted during the Inception phase are designed to validate scope, align stakeholders, and ensure a shared understanding of how Guidewire InsuranceSuite supports business needs. These sessions are exploratory and collaborative rather than execution-focused.

Two key participant responsibilities during elaboration sessions are focusing on the happy path first, followed by edge cases, and reviewing standard process flows in relation to Guidewire product functionality, making Options A and B correct.

Starting with the happy path allows participants to validate the primary business scenario without unnecessary complexity. Once the core flow is understood and agreed upon, edge cases and exceptions can be discussed in context. This approach aligns with Guidewire's recommended practice of leveraging out-of-the-box functionality before introducing complexity.

Reviewing standard process flows and mapping them to Guidewire functionality ensures that stakeholders understand what the product already provides. This helps avoid over-customization and supports the "configure over customize" principle central to Guidewire implementations.

The remaining options are not objectives of elaboration sessions. Creating detailed UI mockups (Option C), formalizing sprint tasks (Option D), writing Gosu code (Option E), and performing regression testing (Option F) all occur in later phases of the project lifecycle.

Elaboration sessions are successful when they focus on understanding, validation, and alignment—setting the stage for efficient and predictable delivery.

## NEW QUESTION # 35

.....

People always do things that will benefit them, so as get a certificate of the InsuranceSuite-Analyst test dumps. Obtaining a certificate means more opportunity, a good job, a better salary, and a bright. The benefits are numerous, and we give you a quicker method to achieve this. Our InsuranceSuite-Analyst Questions and answers list the knowledge point for you, and you just need to spend some of your time to practice. We are pass guarantee and money back guarantee. And the pass rate is 98.
