Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam

Sample Questions (Q41-Q46):

NEW QUESTION # 41

A company has deployed Horizon on a Nutanix cluster running the ESXi hypervisor. They are starting the configuration for the deployment of 1000 virtual desktops running Windows 10 in a Linked Clone Desktop Pool.

The company has these requirements:

- * Reduced time for initial virtual desktop deployment
- * Fast recompose time when updating the pool with patches and new application installs
- * Provide a high level of availability to the pool

What should the company enable, that will allow this Nutanix VDI implementation to meet the stated requirements?

- A. View Storage Accelerator
- B. Separate datastores for replicas and clones
- **C. View Composer API for Array Integration**
- D. VM disk space reclamation

Answer: C

Explanation:

View Composer API for Array Integration (VCAI) is a feature of VMware Horizon that leverages the native cloning abilities in the storage array to offload storage operations within a VMware View environment¹²

. This feature allows customers to offload the creation of linked clones to the storage array³.

NEW QUESTION # 42

An administrator supports a user group that spans across 10 Nutanix clusters for a medium-sized medical communications firm. The 10 Nutanix clusters are managed by a single Prism Central instance.

This group's virtual desktops are all cloned from a common gold image and all applications are published from a Citrix Virtual Apps farm. The administrator needs to keep the gold image in sync across all of the clusters.

What is the best way to achieve this?

- A. use the native replication facility within the Machine Catalog
- **B. Upload the gold image to Prism Central Image Service.**
- C. use Move to maintain all gold images across the clusters.
- D. Setup a Protection Domain with the gold image as 3 protected entity.

Answer: B

Explanation:

Prism Central Image Service allows you to upload and manage images through Prism Central by using the v3 API. You can also choose where your images will be available across different clusters¹²³

NEW QUESTION # 43

A company is planning to implement Citrix Virtual Apps and Desktops on Nutanix clusters running AHV.

The initial implementation will be sized for 1000 virtual desktops with Windows 11, Microsoft Office 2021 and Adobe Creative Cloud All Apps installed.

What is the correct prerequisite to implement a successful installation of the Nutanix AHV MCS Plug-in?

- A. The user running Nutanix AHV MCS installer must have administrator privileges on the Citrix Storefront.
- B. Nutanix data services IP address is reachable.
- **C. The user running Nutanix AHV MCS installer must have administrator privileges on the Citrix Broker.**
- D. Nutanix cluster virtual IP address is reachable.

Answer: C

Explanation:

The Nutanix AHV MCS Plug-in is a tool that enables Citrix Virtual Apps and Desktops Delivery Controllers (also called Brokers) to create and manage Citrix-provisioned VMs in a Nutanix AHV infrastructure environment. The plug-in is based on the Citrix-defined plug-in framework².

To install the Nutanix AHV MCS Plug-in, you need to meet some prerequisites, such as:

The Delivery Controller version must be 7.15 LTSR CU3 or later.

The Delivery Controller must be able to communicate with Prism Element (PE) using HTTPS port 9440.

The Delivery Controller must have PowerShell 5.1 or later installed.

The user running the installer must have administrator privileges on the Delivery Controller².

NEW QUESTION # 44

How should an administrator protect Writable AppVolumes during a disaster in a Nutanix environment?

- A. Disable HA reservations to ensure that VMS are powered on using best effort during a disaster,
- B. Create a protection domain and add the AppVolumes VM entities to it. Set up a schedule to replicate the VMS every 60 minutes.
- C. Enable HA reservations on the cluster to ensure there is capacity in case of failure.
- **D. Create a storage container in both the primary and DR data centers for the Writeable AppVolumes. Set up asynchronous DR between the two sites.**

Answer: D

Explanation:

Writable AppVolumes are a feature of VMware App Volumes that provides users with a dedicated virtual disk for storing user profile data and user-installed applications¹. Writable AppVolumes are stored as VMDK files on a datastore².

To protect Writable AppVolumes during a disaster in a Nutanix environment, one possible solution is to use asynchronous DR between two sites. Asynchronous DR allows you to replicate VMs and their associated data from one site to another at regular intervals using protection domains and remote sites³.

NEW QUESTION # 45

Which management console provides different wizard-based deployment or configuration scenarios to publish resources using desktops applications?

- **A. Citrix Studio**
- B. Prism Element
- C. MMC
- D. Prism Central

Answer: A

Explanation:

Citrix Studio is the primary management console for the Citrix Virtual Apps and Desktops (or Citrix DaaS) site.⁷ It is explicitly designed with wizards to guide administrators through deployment scenarios, such as creating Machine Catalogs (provisioning VMs) and Delivery Groups.

It is specifically within the Delivery Groups wizard in Citrix Studio that an administrator configures the publishing of resources (such as applications and desktops) and assigns them to users.⁸ While Prism Central manages the underlying Nutanix infrastructure (VMs, networking), it does not handle the session brokering or the specific definition of "published resources" for the VDI users.
