SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q31-Q36):

NEW QUESTION # 31

What system is provided by SAP free of charge and provides an outline of how to deploy SAP Ariba solutions with a task list and project management format?

- A. SAP Cloud Application Lifecycle Management
- B. SAP Cloud Project Studio
- **C. SAP Ariba Enablement Workbook**
- D. SAP for Me

Answer: C

Explanation:

The SAP Ariba Enablement Workbook is an Excel-based project management tool provided free by SAP to assist customers and implementation partners in deploying SAP Ariba solutions. It contains detailed task lists, timelines, and activities aligned to the SAP Activate methodology and is designed to guide project teams through deployment steps such as data collection, configuration, and testing. Other options like SAP for Me are customer portals, not deployment tools, and SAP Cloud Application Lifecycle Management is a broader lifecycle tool not focused specifically on Ariba deployments.

NEW QUESTION # 32

The full SAP Ariba Strategic Sourcing suite baseline (Greenfield baseline scenario) has been applied to the customer Test site. The customer and project team will configure SAP Ariba Sourcing and deploy that to the Production site, then configure and deploy the remaining solutions in stages. What does this mean for subsequent migration activities?

- A. Both SAP Ariba Sourcing as well as subsequent migration activities would be Brownfield deployments.
- **B. Subsequent migration activities follow Bluefield deployment scenario.**
- C. Subsequent migration activities will require a complete reconfiguration of existing solutions.
- D. If the baseline applied the full suite, the full suite must be configured and migrated to production at the same time.

Answer: B

Explanation:

In SAP Ariba deployments, when a full Greenfield baseline has been applied initially-meaning a fresh, full suite setup on the Test site-and the customer deploys a single solution (like Sourcing) to Production first, all subsequent deployments follow a Bluefield scenario. This means that later stages of deployment (e.g., Contracts, Supplier Risk) involve selective migration and incremental configuration changes to Production without rebuilding everything from scratch. Bluefield scenarios specifically accommodate environments where Production may already be live with transactions, requiring careful selective migration to avoid disruption. This contrasts with

Brownfield, which typically involves upgrading or reusing existing deployments without full baseline resets. Also, Greenfield deployments do not require all suite components to migrate simultaneously; phased deployments are supported. This approach ensures minimal risk during deployment and provides flexibility to roll out additional modules progressively. Extract summary:SAP Ariba documentation highlights Bluefield for phased, incremental deployments post Greenfield baseline application to accommodate live production environments.

NEW QUESTION # 33

How do you format the Help Tip for a field?

- A. Select Field Configuration and edit the field. In the Help Tip, you can only use plain text without any formatting options.
- B. Select Field Configuration and edit the field. In the Help Tip, you can format the text by using the mouse to highlight the text and then right-clicking to access formatting options.
- C. Select Field Configuration, select the class, and edit the field. In the Help Tip, you can format the text by selecting the string and use regular keyboard controls such as Ctrl-I, Ctrl-b
- **D. Select Field Configuration, select the class, and edit the field. In the Help Tip, you can add standard HTML tags for formatting**

Answer: D

NEW QUESTION # 34

What is the key role of the SAP Deployment Lead assigned to the project?

- A. To test and validate the solution prior to go-live
- **B. To act as the liaison between the customer and SAP Support in resolving technical issues and manage customer escalations**
- C. To perform configuration changes required to the SAP Ariba Strategic Sourcing suite solutions
- D. To advise the customer and partner in solution configurations

Answer: B

Explanation:

The SAP Deployment Lead acts as the primary liaison between the customer and SAP Support, managing technical issues, escalations, and coordination during the deployment lifecycle. They oversee environment readiness, migration activities, and issue resolution. Advising on configurations is typically the Functional Lead's role, configuration changes are done by consultants, and testing is led by the customer or testing teams. The Deployment Lead focuses on technical project management and communication.

NEW QUESTION # 35

Which of the following languages is used to define defaults on fields within Ariba?

- A. Javascript
- **B. Ariba expression language**
- C. Python programming language
- D. ABAP

Answer: B
