Microsoft PL-400 certification exam is a great way to demonstrate your skills and knowledge in using the Microsoft Power Platform to build, implement, and manage business applications. If you have experience in working with the Power Platform and want to validate your skills, then PL-400 exam is an excellent option. With the right preparation and training, you can pass the exam and become a certified Microsoft Power Platform Developer.

Quick introduction of the Microsoft PL-400 Certification Exam:

PL-400 is a certification exam that is associated with Microsoft Power Platform Developer. Achieving a passing score on this exam will validate your knowledge of designing and developing Windows Azure-based solutions that integrate on-premise applications with services hosted in the Windows cloud. Created and maintained by Microsoft, the PL-400 exam is a Microsoft-certified exam.

Microsoft offers our valued customers a series of free practice test options to help you focus your studies. These options simulate the real test environment so, you can get familiar with the process of taking a Microsoft certification exam. In addition, we provide a comprehensive study guide for each tournament/exam. These guides include practice questions like **PL-400 Dumps**, an in-depth understanding of the objectives, links to additional information, and videos where applicable. Mechanism-based questions are also included.

Microsoft's certification exams are designed to test your ability to accomplish the essential tasks involved in performing specific jobs within the job function. Businesses depend on these types of professionals to deliver excellent products and services. PL-400 Exam is not a prerequisite for obtaining any other Microsoft certification. However, it is helpful in studying well before taking another certification exam that might be related to the PL-400 exam topic.

Microsoft PL-400 Exam is an important certification for individuals who want to gain expertise in developing solutions for Microsoft's Power Platform. The Power Platform is a suite of services that allows developers and businesses to create, integrate, and automate custom applications and workflows. The PL-400 Exam is designed to test a candidate's knowledge of Power Platform architecture, Power Apps, Power Automate, Power Virtual Agents, and Power BI. Passing PL-400 exam demonstrates that a developer has the skills and knowledge needed to design, build, test, and deploy custom solutions using Microsoft's Power Platform.

Microsoft Power Platform Developer Sample Questions (Q105-Q110):

NEW QUESTION # 105

You need to add the script for the registration form event handling.
Which code segment should you use?

- A. `formContext.data.entity.addOnSave(myFunction)`
- B. `formContext.data.isValid()`
- C. `formContext.data.removeOnLoad(myFunction)`
- D. `addOnPreProcessStatusChange`
- E. `formContext.data.addOnLoad(myFunction)`

Answer: E

Explanation:

Explanation

Scenario: Information about upcoming tournaments must be pre-located into the registration form when the registration form loads. `addOnLoad` adds event handlers to the Subgrid `OnLoad` event event.

Topic 3, Contoso Pharmaceuticals

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

Contoso Pharmaceuticals manufactures and sells drugs to retail and wholesale pharmacies, hospitals, and research facilities.

The company plans to implement Dynamics 365 Sales and Dynamics 365 Finance.

Current environment

Contoso maintains a Microsoft Excel workbook that lists all drugs they supply.

Pharmacies submit order requests through email.

All information at customer locations is handwritten by customer representatives.

Contoso uses Cerner, which is a medical industry application that uses a proprietary database.

Some accounts are referrals from other pharmacies.

Every pharmacy has its own Dynamics 365 Sales instance.

Requirements

General

Contoso wants to ensure that there is minimal custom code and custom connectors in the system.

Accounts

Ensure that the names of the pharmacies are synced between the accounting and the customer management systems.

Account numbers should be entered automatically into the pharmaceutical system that is in a Cerner database and kept in sync.

When the account is entered into the system, extra fields must appear if the referral customer box is selected. If the box is not selected, the extra fields must not appear.

A trigger must be created that changes the Priority field to 1 in the Account record 10 days after an Account record is created.

A field named Priority_Trigger must be created to trigger the Priority field.

A field named Facility type field must be added in order to select whether a customer is a retail pharmacy, wholesale pharmacy, research facility, or hospital.

Users

UserA must be able to create and publish Power Apps apps.

UserB must be the owner of all the systems and be able to provide permissions and create all new environments.

UserC must be able to create apps connected to the systems and update the security roles and entities.

Pharmacy representatives must only be able to run the apps and access their own records.

Access to the accounting Power Apps app must be restricted to accounting team members.

End users must have minimum access to the required systems.

Only supervisors must be able to view phone numbers in the Accounts form.

Developers must be able to create new apps for all users.

Sales users must only have access to their own records.

Reporting

Pharmacy orders must be displayed in four graphs as follows:

Annual revenue over \$100,000

Annual revenues under \$100,000

Research facilities

Hospitals

The graphs must be interactive, and users must be able to drill down on any dimension.

Customizations

Ensure that notifications are sent to the sales team when a lead is added by using Slack.

Ensure that leads have a review stage added to the sales process.

Doctors must be manually added to a custom entity named Doctor if the doctor is not listed.

Refill dates for customer prescriptions should be automatically determined and a notification should be sent to the customer.

Fields for the doctor's name and phone number must be displayed in the customer record.

The doctor entered on the customer's record must be validated against doctors that exist in the system.

The new solution will be sold to other pharmacies for use. The application must not allow changes to be made.

The solution must be error free so that when it is installed in other environments it does not cause issues.

A custom mobile app must be created to allow salespeople to add or search by pharmacy name.

Pharmacy records must be uniquely identified by pharmacy name, address, contact name, and phone number.

When a pharmacy is added by using the mobile app, the phone number must be validated to be all digits.

NEW QUESTION # 106

You need to resolve the address validation API error.

Which method should you use to connect?

- A. a plug-in attached to a custom action called from JavaScript
- B. JavaScript code
- C. an Azure function triggered by a webhook
- **D. a custom connector used in a cloud flow**

Answer: D

NEW QUESTION # 107

You have several model-driven apps.

You must ensure that app creators and system administrators can customize the apps. You must follow the principle of least privilege.

You need to assign the permissions that are needed for app creators and system administrators.

Which security roles should you assign? To answer, drag the appropriate roles to the correct requirements.

Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point

Roles	Requirement	Role
System Administrator only	Create customizations in the system	
System Customizer only	View all system data entities	
	View all data stored in system entities	

Answer:

Explanation:

Roles	Requirement	Role
System Administrator only	Create customizations in the system	System Customizer only
System Customizer only	View all system data entities	System Customizer only
	View all data stored in system entities	System Administrator only

Explanation

Customizer, customizer, admin

System Administrator has Organization level access to all system (Out Of Box) entities while System Customizer has only User level access to all system entities. While both System Administrator and System Customizer have Organization level access to all custom entities.

NEW QUESTION # 108

A Power Platform solution includes the following Web API call:

GET

[http://contoso.crm.dynamics.com/api/data/v9.1/RelationshipDefinitions?\\$select=SchemaName](http://contoso.crm.dynamics.com/api/data/v9.1/RelationshipDefinitions?$select=SchemaName) You need to explain what this line of code is doing.

What does the code do?

- A. Retrieve a list of tables that have more than one relationship.
- B. Retrieve a list of tables that are related to each other.
- C. Retrieve the list of relationships between tables.
- D. Retrieve a list of one-to-many relationships with other tables.
- E. Retrieve a list of many-to-many relationships with other tables.

Answer: A

Explanation:

Explanation
